HIKVISION VIDEO VERIFICATION SOLUTION

Pain Points

In many alarm receiving centers, the ARC client usually provides no video play of the monitored connections.

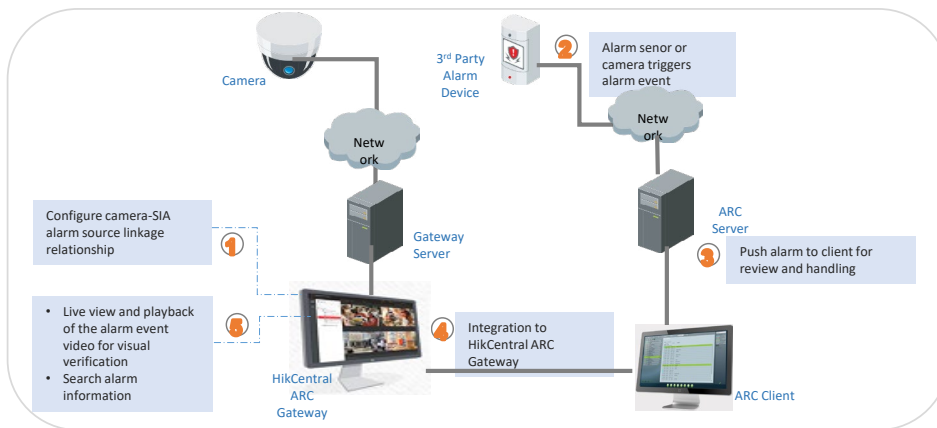

Low accuracy and efficiency in alarm checking and acknowledgement, which also delays the on-site alarm handling when alarm events occur.

Poor integration and compatibility with Hikvision cameras and devices.
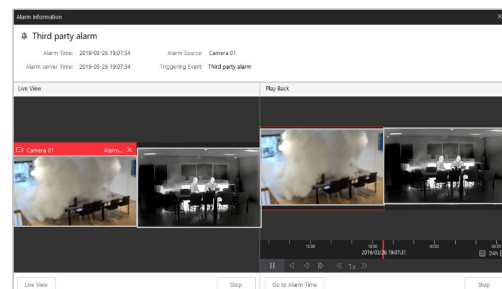

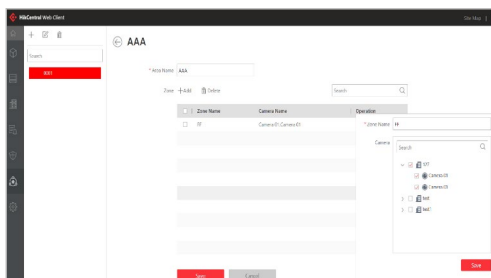

Solution Highlights

HikCentral Gateway Solution for ARC enables live view and playback of the video from the monitored connections when alarm events occur, and also provides easy compatibility with Hikvision cameras and devices.

Configure the linkage relationship between 3rd party alarm source and Hik-camera source on the HikCentral Web Client, e.g., Alarm Zone F of Area A links to Camera 01.

When handling alarm in ARC client, operator can have both the live and playback of corresponding cameras pop up automatically.

Product Showcase

HikCentral ARC Gateway

• Integration interface for 3rd-party alarm software
• Video Surveillance Management (VSM)Service
• Control Client for video verification
