

An aerial photograph of a large industrial facility, likely a logistics park. The building has a prominent blue roof with a grid of solar panels. The ground is paved and features several yellow loading docks. A red semi-truck is parked on the left, and a white car is in the center. A yellow dashed line with arrows indicates a traffic flow or safety zone. In the bottom right, there is a parking area with several cars and a small building. The overall scene is well-organized and modern.

WITH EASE
LOGISTICS PARK SOLUTION**

What is a Logistics Park and What Concerns Need to be Addressed?

A Logistics Park is an area zoned and planned for the purpose of transporting goods. We usually see two types of warehouses: a fulfillment center, for shipping and receiving goods, and a dispatch center, where cargo is shipped and vehicles are sent off to their various destinations.

Loss prevention and efficient operations are the two main concerns at any logistics parks. How can managers react quickly when there is a missing or damaged package? Is there a way to trace each step in the process and pinpoint where the problem took place? And of course, is there a tool to digitize and more efficiently manage the docks for loading and unloading?

The Hikvision Logistics Solution

Hikvision answers each of these concerns by offering an all-encompassing solution that focuses on four critical components. This solution not only improves safety with its top-notch security solution, but also helps improve operational efficiency through adapting Artificial Intelligence-powered functionality. All together, Hikvision's solution aims to build a more secured and more intelligent logistics park.

Vehicle Management

Personnel Management

Protective helmet

Eye wear

VIS clothes

Protective boots

Dust mask

Ear plugs

Safety gloves

Hard Hat Detection

PPE stands for Personal Protective Equipment – protective-wear that ensures worker safety. Hikvision now offers intelligently detection of helmets or other PPE.

For example, the embedded hard hat detection can notify relevant personnel if a worker is found not wearing one where required. This helps to improve the safety level without requiring extra manpower to oversee.

Access Management for Warehouses

Entering and Exiting Warehouses During Rush Hours

Workers usually wear gloves and/or carry merchandise, making it difficult to use authentication methods that require physical contact. Additionally, clocking in and out is time-consuming with large numbers of workers. If a card-based authentication is used, there is also the problem of fake attendance records.

Face recognition terminals now make access authentication accurate, efficient, hygienic, and impossible to counterfeit.

**MinMoe
Face Recognition
Terminal**

DS-K1T671TM-3XF

Quick and Easy Movement Throughout the Warehouse

In the warehouse areas, forklifts and other equipment constantly pass from one zone to another. Face recognition technologies offer a smooth and convenient way to access various areas, for example, through a roller shutter door, without having to have workers get down from the cart.

Warehouse Dock Management

Many dock platforms face various efficiency challenges, such as how to best arrange the entire workflow from truck entry to cargo pickup, how to allocate resources so that dock platforms are operating efficiently, and more. With Hikvision's digital dock platform, all of these questions are conveniently solved through an automated workflow.

Step 1: Registration

Register vehicle information by scanning a QR code and accessing the registration site or at the security booth

Queue Display

41 AS-488 SH Waiting	42 KS-138 SH Waiting	43 WS-231 SH Waiting	44 YS-738 SH Waiting	45 BE-900 SH Waiting

Step 2: Queuing

Vehicles inside the park will queue for loading/unloading. The queuing process is displayed on the outdoor LED screen.

Step 3: Dock Platform Management

A Dock platform camera will detect and recognize each platform's status and record truck information. Staff can then use the app to call the truck to a platform.

Visual Display of the Platform Status in Real Time

1. Platform Status Indicator

Each color represents a platform status. For example, a red icon and license plate will be shown for platforms that are currently busy. If a vehicle parks at the wrong platform, the icon will be yellow; and if the platform is empty, a green indicator will be shown.

2. View Operation Status Remotely

Click the platform icon on the canvas to play back videos on that platform

On-Site Driving Regulations and Management

As most of the daily routines within a logistics park are completed using vehicles, it is important to ensure road safety within the area. The Hikvision Solution offers tools for:

- Vehicle speed control
- Illegal parking

4 MP DarkFighter Traffic Network Speed Dome

Reliably Record and Safely Store All Operations

Thermal Network Bullet Camera
DS-2TD2137-25V1

Perimeter Protection

When dealing with large areas that suffer from low illumination, using a thermal camera can provide clear video – even in zero-light environments.

For areas that require higher-level security protection, the combination of radar and dome camera brings both accurate radar and clear visuals together. The link between the two – radar accuracy and dome camera clarity – allows you to easily track any suspicious movements.

Scenario 1

Low light and long distance

Scenario 2

Areas with high security requirements

Intelligent and Efficient Security Patrol

On-site Patrols

Phase 1

The traditional on-site patrol methods suffer from several downsides:

- More manpower required
- Low efficiency as all the sites are checked manually
- Potentially dangerous for security to patrol areas with hazardous materials

Remote Patrols

Phase 2

Remote patrols are safer and more efficient. Security or other managers can visually check all sites using high-definition cameras based on patrol schedules. Users can also enjoy the benefit of remote patrols with their existing security system.

If an event is captured during a patrol, security guard receives notification and makes needed improvements.

Workflow for the patrol and improvement process

Reports for security manager and production manager

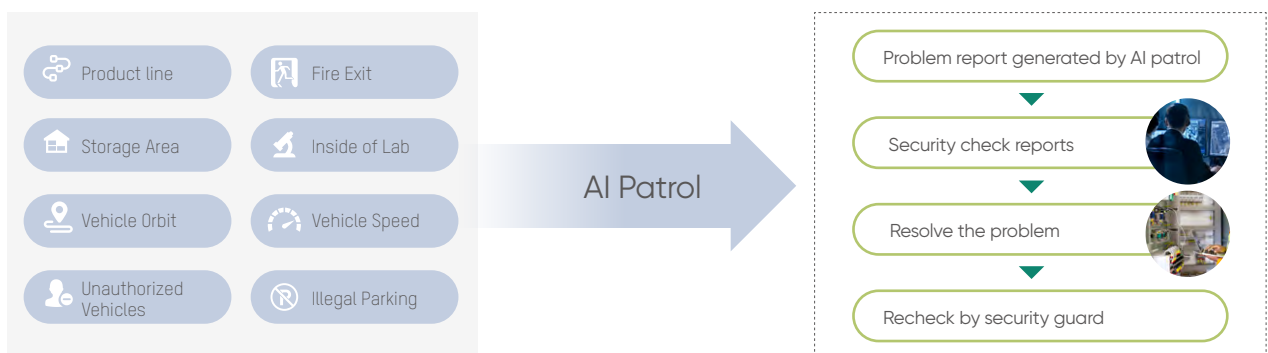

Comprehensive reports include all patrol tasks and process for security manager.

Reports detail each task for the production manager, who is responsible for resolving problems.

Phase 3 AI Patrols

Artificial Intelligence Patrols add intelligence on top of remote methods – now security staff and managers do not have to manually check all video footage. The AI patrol will identify a problem when a captured image triggers pre-set rules. In the past, a security guard had to check images for all patrol locations. However, with AI patrol, only those that have an issue will be sent to security, vastly reducing labor cost. Security can then resolve that specific problem. AI patrols reduce manpower and offer a more intelligent way to quickly respond to any problem.

Goods Management

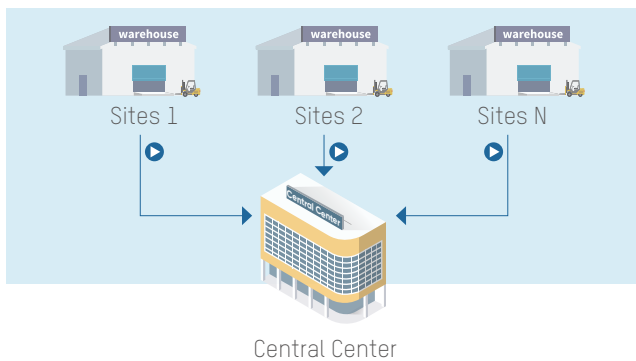

Quickly Locate any Problem with this Visualized, Trackable Process

Visualized Parcel Tracking

01 Scenario
Merchandise Flow Across Multiple Sites

Requirements

In e-commerce businesses, for example, warehouse service providers often struggle to quickly clarify who is responsible for loss or damage and can be charged enormous penalties.

02 Scenario
Goods Flow in one Warehouse

Requirements

With expensive or fragile merchandise, warehouse owners need to clarify responsible parties and procedures in each part of the process.

Warehouse Fire Prevention

Flammable materials threaten warehouses and the often large amount of stored goods. In the past, security teams only received reminders after a fire. But by then, immense losses have already occurred.

With thermal cameras and smoke detectors, Hikvision offers a preemptive solution that helps to identify potential risks before disaster, making fire prevention smarter and more effective.

Command Center

Intuitive and Comprehensive Dashboard

With the 3D image of your logistics park at the center of the dashboard, you will see all operational data and activity in one place. Whether you're looking for statistics on operations, security, or employee performance, this dashboard has it all!

AR Command Center

This AR command center is an efficient tool for you to quickly access real-time video feed for different areas - simply click on the tag to switch view window.
