Action Required:	Information Only				

This manual applies to iVMS-4500 (Android) mobile client software, please read it carefully before installing. The contents in this manual are subject to change without notice.

Chapter 1 Introduction

1.1 Overview

iVMS-4500 (Android) mobile client software, which is based on Android OS, can be used to remotely monitor the live video from HIKvision embedded DVR, IP camera, IP speed dome and DVS via wireless network, including PTZ control.

With this software installed in your mobile device, you are able to log on to the front-end device via WIFI, 2G or 3G, additionally, if there is no public IP available, it's accessible by using a dynamic name, or by forwarding ports to the public IP of router.

1.2 System Requirements

Hardware: CPU 500MHz or higher, available RAM at least 15MB

Software: Android OS V1.6 and above

1.3 Performance Description

	Number of devices	Manage maximum 16 IP devices
	Stream Type	Sub stream
	Frame Type	BBP or single P
	Frame Rate	1~8FPS (depends on the
Mobile Client		performance of mobile device)
	Resolution	QCIF, CIF
	Stream Type	Video
	Bit Rate	32~512Kbps (depends on the net
	Dit Nate	environment)

Click on the main menu you can enter password modify interface to change your current password. Enter old password, new password and then confirm new password, press 'MENU' button and then click button to complete.

About

Click in the main menu, you will get the information such as version, build date. For help, you can click to open the help document.

Chapter 8 Troubleshooting

- 1. What kinds of devices are compatible with iVMS-4500 mobile client software? The encoders which utilize H264 codec are compatible with this software, such as embedded DVR, DVS, IP camera and IP speed dome; it also requires this software to be used with devices which support dual stream.
- 2. Why does the mobile client software prompt 'login failed' when accessing the device via WIFI?

Please check the network settings, and also make sure that the device is always online and accessible.

3. While previewing the video, why does the response of the mobile device become very slow and the video sometimes freezes?

This problem may be due that the lower performance of your mobile device, please try to preview less cameras at the same time, or decrease the frame rate and resolution.
