

# Better Security Technology, Lower Costs for Commercial Real Estate Portfolios

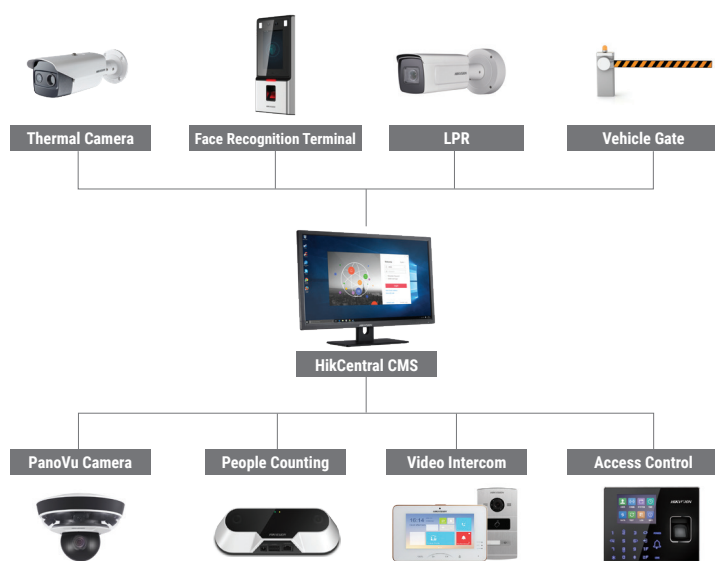

**HIKVISION**

Hikvision's commercial real estate solutions provide an integrated approach to security and a broad portfolio of products to provide reliability, ease-of-use, and affordability. Features include:

- **HikCentral CMS:** Hikvision's centralized management software system for use with a single site or a multi-site enterprise that delivers a central integration point for critical security subsystems and building automation systems.
- **Access Control:** Use proximity cards to provide access to secured areas or use biometrics for maximum tenant convenience. Scalable solutions include a wide-range of card readers and technologies, including fingerprint access and facial recognition.
- **Facial Recognition:** HikCentral can effectively leverage biometric technology (fingerprint, facial recognition) to regulate any controlled access point, authorized tenant and visitor access, allow for seamless entry, and integrate with employee management and time-and-attendance systems.
- **Thermal Cameras:** Monitor your energy efficiency, track HVAC mechanical equipment performance by detecting heat before an issue arises, and maintain proper temperature for electrical equipment.
- **License Plate Recognition:** Eliminate traffic backups during peak hours by allowing tenants to use their license plate instead of an access card to gain entry to parking areas.
- **Video Intercoms:** Enables visual confirmation of identity before granting entrance and building access.
