2) Observation of the device indicator flash means the device already enters the AP mode.

Method 2. Entering the AP mode by long-press the call button.

When long press the call button, the indicator will flash server times. This

means the device enters the AP mode.

Connect to the device's hotspot.

- 3) Searching the device's hotspot using a mobile phone.
- 4) Connect to the device hotspot. The hotspot password is the same as the device's password.

- 5) Checking the device IP. At this time the device is a router, so the device IP is the router IP.
- 6) Enter the device IP on the mobile phone then configure the device.

Note:

1. When the device enters the AP mode. The device can't connect to WIFI at the same time.
