How to Initial Access Controller

Preparation

In this document, the access controller includes DS-K2600 series and DS-K2800 series access controllers.
Notice

1. Please make sure access controllers are powered on before initializing the hardware;

2. Initializing the hardware will restore device to factory, and all parameters what you set will be erased;

3. After initializing, please activate access controllers again by setting a new strong password;

4. For DS-K2600 series access controllers the initial jumper is in the same position, please find it in access controller mainboard as following pictures:

Normal Status	Initial Status

5. For DS-K2800 series access controllers the initial jumper is in the same position, please find it in access controller mainboard as following pictures:
