

Hikvision + Eagle Eye Solution: Protect the health and safety of your campus

A cloud video surveillance solution for the K-12 market that's seamless, affordable and cyber-secure

Education leaders today have additional challenges to ensure security in schools

K-12 Challenges

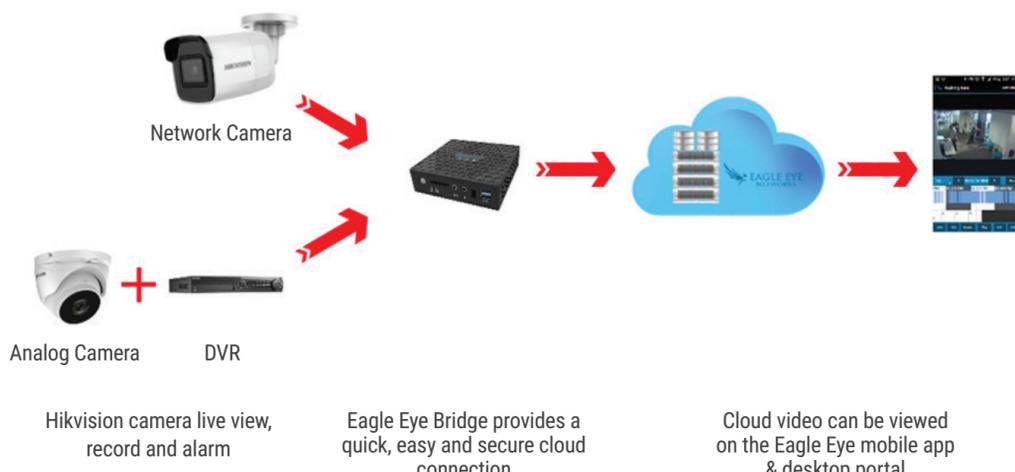

- Pandemic puts an additional burden on education leaders to safeguard the health of faculty, students and visitors
- Preliminary temperature screening is an important tool, but most existing systems are labor-intensive or require close contact
- Existing systems do not support both security and temperature screening
- High operation and maintenance cost for video surveillance
- Long response times in emergency situations
- Need to meet state video surveillance requirements for special education classrooms
- Records management: Difficult to share with authorized users and third parties

A cloud solution is an affordable way to bring scalability, efficiency, cybersecurity and more to K-12 security systems

Eagle Eye Networks

Eagle Eye Networks is #1 in cloud video surveillance worldwide, addressing the needs of businesses, alarm companies, security integrators, cities, and individuals. Eagle Eye's 100% cloud managed solutions provide cloud and on-premises recording, bank-level security and encryption, and broad analog and digital camera support – all accessed via the web or mobile applications.

How do Hikvision cameras work with Eagle Eye Network products?

What is the Eagle Eye Bridge?

Eagle Eye Bridge

- Provides a redundant local video buffer and utilizes Intelligent Bandwidth Management for complete control over network utilization
- Reliable and secure on-site appliance which isolates the cameras from the Internet and provides an additional layer of protection against intrusion and malware

Solution Product Showcase

Hikvision Network Cameras

- Live view & snapshot
- Record video & playback
- Instant alarm
- H.265/ H.265+
- 120dB WDR
- IR range: up to 98 ft. (30 m)

Hikvision Highly Accurate Thermographic camera

- Optical: 2688x1520, thermal: options of 160x120 and 348x288
- Accuracy of ±0.9° F (±0.5° F with Blackbody Calibrator)
- Effective range varies by model
- Skin-Surface Temperature
- Face Mask Detection

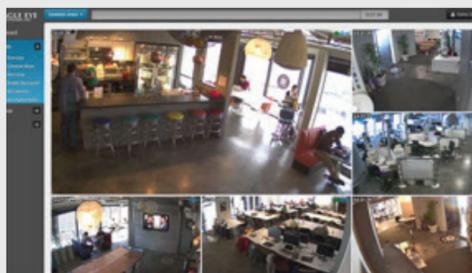

Eagle Eye Cloud VMS

The Eagle Eye Cloud provides 100% cloud management, 100% mobile and web browser viewing, and 100% cloud recording.

Solution Features & Benefits

Scalability at a Flexible Price Point

- Hundreds of compatible Hikvision camera models including network cameras, network PTZ, Turbo HD cameras, Turbo recorders, and Highly Accurate Thermographic cameras
- Security that meets any budget with flexible monthly or yearly payment plans, remote viewing of encrypted video for 100% mobile and web browser viewing that's fully secure
- Solution ensures compliance with state laws for video surveillance in special education classrooms. Current laws include: Georgia - HB614; West Virginia - SB632; Texas - SB507

Eagle Eye Networks cloud VMS web interface

Hikvision cameras screen for elevated temperature

Elevated Temperature Screening

- Utilize the fully supported Hikvision thermographic camera for fast, contactless screening of faculty, students and visitors for elevated temperature
- Streamline records management with fully supported system—output, store and manage captured temperature data, video footage and event data
- Ideal for deployment in main office buildings, campus entrances or other areas where students and faculty gather

Robust Cloud Features

- Real-time cloud video motion alerts
- Cyber-secure, cost-effective, scalable solution that empowers schools to expand their security solution incrementally over time
- Expedite response times by designating first responders to receive real-time security camera access during emergency situations
- Manage multiple cameras, locations and users from a single interface and easily adjust camera and storage settings right from your mobile phone

Video analytics provide additional information to security staff
