A New Chapter Begins: Enhancing Elderly Care in Nursing Homes

After decades of hard work, many seniors retire to start a new chapter in life. But when they face health concerns or just need a little extra help, they often choose to move into a nursing home. It's a place to relax, make new friends, and get the attentive care many elderly people need. And that's exactly what they seek as they enter their "golden years."

For many elderly and their families, high-level services are essential for day-to-day comfort. But how can nursing homes meet rising expectations, enabling staff to focus only on true matters of concern while providing quality care and companionship? Today, there are solutions.

Dive in and explore Hikvision's innovative solutions for nursing homes. These solutions employ advanced and automated technologies that will likely change the way nursing homes operate.

SPREAD THE JOY OF VISITING LOVED ONES

Nursing home residents and their visitors want to make the most of the time they have together, hoping for a seamless and pleasant experience from parking to visitor services and more.

With Hikvision's solutions for streamlined parking, easy visitor registration, and excellent dining services, you'll be able to create a stress-free atmosphere for everyone.

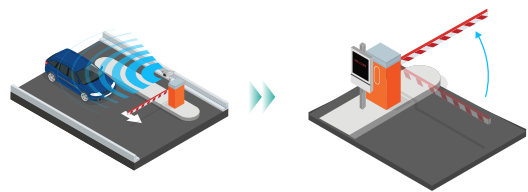

Non-stop vehicle entry and exit

Enable quick entry of internal and pre-registered vehicles with **Automatic Number Plate Recognition (ANPR) Cameras**.

Automatic authentication and recording of vehicle information allows for fluid entry and enhances overall security.

Entry

Non-stop access enables both efficiency and security.

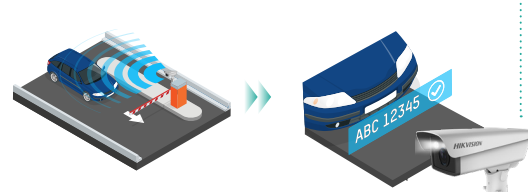

Vehicle Detection

Intelligent Barrier Control

Exit

ANPR authentication prior to exit or exit for all passing vehicles.

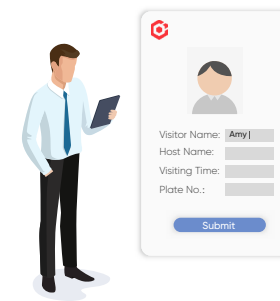

Vehicle Detection

Vehicle Info Recording

Visitor authentication made easy

Forget the hassle of filling out lengthy forms and waiting in lines. Front desk staff can help visitors register via the **HikCentral Professional (HCP)** platform on the web or app. Visitors can also check in themselves using the **Visitor Terminal** at the reception desk.

Easy Registration

Quick Check-in

Dining delights for everyone

Who says nursing home cafeterias have to be boring and bland? Not Hikvision. We provide various forms of **digital signage** and **LED screens** to showcase menus, cuisines, and important messages. You may also deploy Hikvision's **MinMoe Terminals** at checkout counters for easy, contactless payment.

Visitors can even be happily surprised with **live video feeds from the kitchen of meal preparation** so that they can rest assured of the food quality at the home.

PROVIDE BETTER CARE WITH SMARTER DEVICES

Some residents may be in poor health or unable to move around on their own. For them, a small accident can have serious consequences. However, there might not be sufficient staff to attend to multiple residents at any given time.

That's why Hikvision's solution frees staff in nursing homes from repetitive tasks and helps them solve problems faster, with smart, connected devices. They can check remotely and be well prepared to respond.

Faster aid after a fall

For the elderly, falls can lead to very serious injuries. Timely treatment after a fall is critical. Hikvision's **Fall Detection Radar Sensor** automatically detects a fall and instantly reports the accident to assigned caregivers for support, assisting with the best time to administer aid.

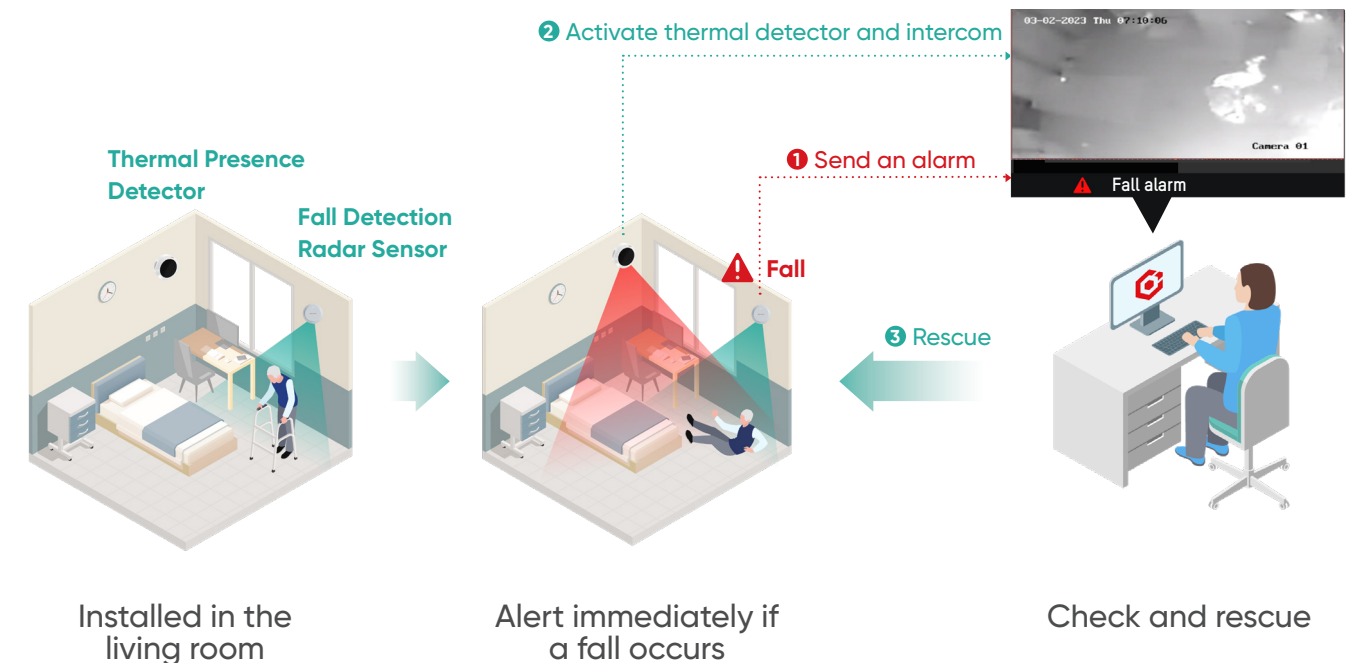

The **Thermal Presence Detector** provides a video clip that captures human shapes without personal details, safeguarding privacy while helping staff assess the incident in real time.

We also offer thermal detectors with a built-in radar sensor to provide fall detection and thermal video recording in one unit.

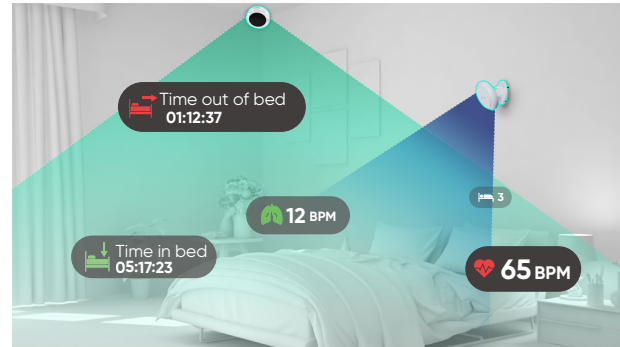

Automated anomaly alarms

Frequent room visits can increase the workload for caregivers. In addition to fall detection, Hikvision's **Radar Sensor** and **Thermal Presence Detector** also provide automated detection and alerts for multiple types of risks, so caregivers are always aware of a resident's status.

Attentive care for the elderly

Collecting basic health indicators such as heart and breathing rates, Hikvision's **Auxiliary Care Radar Sensors** can provide important medical information for better analysis of the residents' sleep quality and overall health.

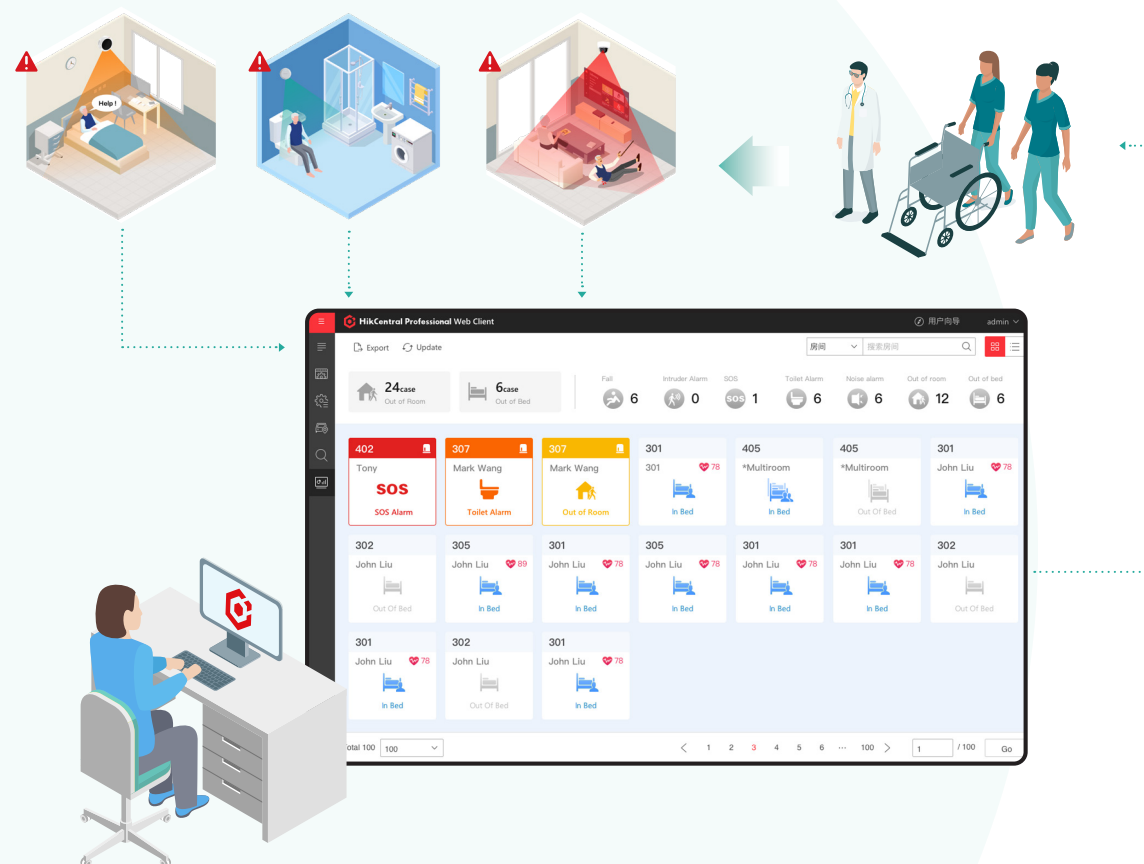

Upgrade to outstanding nurse call systems

Incidents can occur anywhere in a nursing home, so if there is only one alarm device, for example at the bedside, residents may not receive timely care elsewhere.

How can caregivers quickly assess a situation and optimize their response time in an emergency?

Hikvision's **Alarm Panels, Buttons, and Stations** help residents send alarms in places such as bathrooms, bedsides or public areas. They come in different form factors to suit a variety of needs.

After receiving an alarm at the master station, a caregiver can take immediate action or speak directly to the resident near an alarm panel.

TAKE SECURITY TO THE NEXT LEVEL

More intelligent perimeter protection

Hikvision's **AcuSense Technology** equips cameras with accurate, AI-powered object detection and minimizes false alarms triggered by animals, falling leaves, and other moving objects.

Thermal Cameras protect extended perimeters regardless of weather and light conditions.

More efficient security patrols

Nursing homes require regular inspections by security personnel to ensure the safety of their equipment, facilities and the general atmosphere and environment.

Security managers can plan patrol routes on the HCP platform, and security guards can check assigned tasks via the HCP mobile app and check in at MinMoe terminals along the patrol route. The patrol record is uploaded to the platform by the guard to prevent missing tasks.

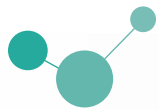

Easy recording of the nursing process

Standardized and regulated service processes help ensure quality care and avoid disputes. Hikvision's **Nameplate Camera** can help caregivers record their service process, which is convenient for potential evidentiary needs.

Residents can also confirm the identity of the caregiver based on the information on the nameplate.

Visualized data for better insights

Hikvision's nursing home solutions feature a comprehensive dashboard that presents perceived data in an intuitive, visualized way. The dashboard empowers operations teams with multidimensional analytics, displays on-going site operations and alarm notifications, and facilitates real-time resident health management. All of this comes together to inform decision making and elevate care for those who need it most.

Contact your local Hikvision representative today to learn more about how this **advanced, AI-empowered solution** can provide **smarter care** and **superior operations** in your nursing home.
