✕ Product Showcase

DS-D6122TH-B/C

This cost-effective classroom information release screen can be quickly setup for a wide range of campus applications.

- Luminance: 600 cd/m^2
- IPX3 waterproof device
- Built-in 13.56 MHz RFID module
- Face recognition (1 person at a time)

DS-D6122TH-C/T

The latest in classroom information release screens, this model features added functions, such as temperature screening.

- Luminance: 400 cd/m^2
- IPX3 waterproof device
- Built-in 13.56 MHz RFID module
- Multiple faces recognition (10 persons at the same time)
- Built-in temperature detection module, supporting indoor temperature screening

THE EDUCATION SOLUTION
FOR SMART CLASSROOMS
CLASSROOM INFORMATION RELEASE SCREEN

✕ What School Administrators Encounter

"School management staff often find it difficult to notify teachers and students of urgent information or sudden changes to class schedules. Furthermore, recording students' class attendance and health status requires a considerable amount of time that should be used for instruction."

Inefficient classroom attendance recording
Manual classroom attendance recording takes a lot of every teacher's time. Conventional paper records are hard to upload and manage.

Difficulty sending important information efficiently
Urgent notifications, showing course scheduling and campus activities, cannot be conveyed to all teachers and students quickly and efficiently.
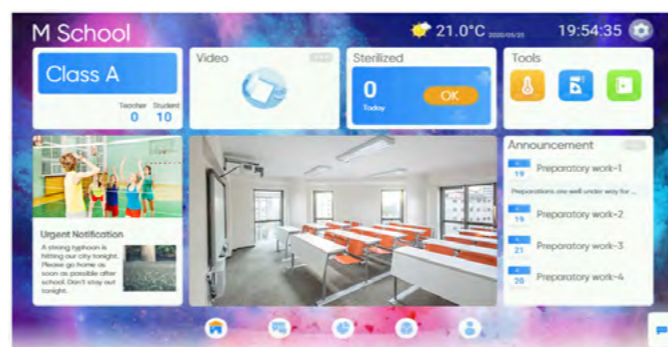

High-cost and inefficient networking requirements
Conventional products require engineers to establish a local area network (LAN) to unify a platform to send out information, especially in K-12 schools which usually do not have their own LAN.

✕ What We Offer

"In a smart classroom, both teachers and students will enjoy new technologies empowering school management and teaching activities. Keep reading to see what novel changes Hikvision's Classroom Information Release Screen can bring to a smart classroom."

Intelligent Class Attendance Recording
An all-in-one solution with instant face recognition, and ID cards reduce the required effort spent on manual attendance checks. When in need, the temperature screening function helps teachers manage students' health by measuring skin surface temperatures indoors.
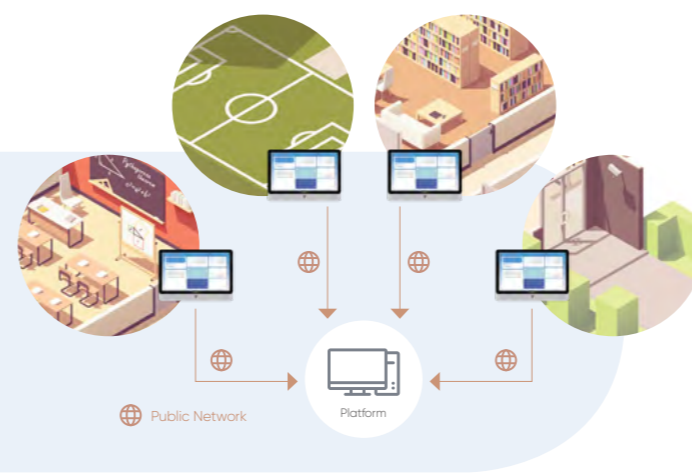

Diverse Education Information Publishing
The highly-efficient information publishing enables quick updates of campus information, class schedules, activities, and urgent notifications.
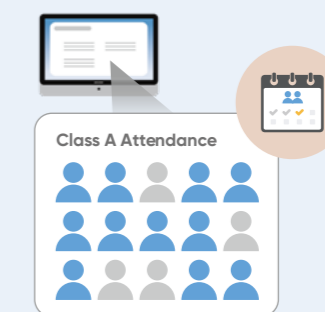

Rapid Setup & Easy Installation
Classroom Information Release Screens are easily setup in classrooms, outdoor teaching settings, at library entrances, and even at school gates. Also, Hikvision screens connect to the platform through a public network, vastly reducing the effort otherwise required to set up several LANs. Our solution can complete central management of equipments installed in different schools without LANs.

✕ Easy Switching Among Six Modes
Meeting the Needs in Any School Scenario

Attendance Mode
Students' class attendance checks can be completed using face recognition. In attendance mode, the screen detects skin-surface temperatures during specified time periods, which helps school administrator discover the general student health status. The screen can check attendance through face recognition or swiping school ID card according to present curriculum, satisfying college administrator's need. Attendance and temperature data are displayed on-screen to provide comprehensive protection for every student.

Campus Information Publishing Mode
In campus information publishing mode, pictures and video about campus activities such as campus sports games are presented on the screen to highlight and record memorable moments for students.
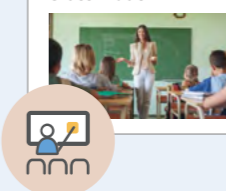

Urgent Notification Mode
Urgent notifications will be displayed on the screen efficiently in this mode, so school administrators can send important updates to every class at once.

Class Mode & Examination Mode
Any class status change can be instantly presented on the classroom information release screen to help teachers, students and school administrators identify their curricula and conveniently arrange teaching activities.

Normal Mode
In normal mode, users can decide the preface module layout of the main interface to show various kinds of functional modes and enhance the user experience.
