(2018-06-05)

Device Model: DS-KB6403-WIP	Firmware Version	VIS_28_H2_EN_NEU_V1.4.62_180515.zip
---------------------------------------	---------------------	-------------------------------------

Note: After upgrading to new firmware, manually **restore default setting** for fully upgrade.

Reason of Upgrade

For the DS-KB6403-WIP Wi-Fi doorbell release.

Modified Features

1. Improve the pre-recording mechanism of motion detection, and add the selection of motion detection area and sensitivity configuration;
2. The customer can set the admin password for the device on hik-connect app. If this step is skipped, the default password is 'admin+sn'.
3. Optimize infrared effects at night.
4. Support the addition of hikvision's NVR, the doorbell can be previewed, recorded, playback and simple configuration on NVR.
5. When the call time is over, there will be no more prompt tone and no indication that the home owner is not at home.

Bugs fix

1. Repair motion detection error reporting problems.
2. Repair failure of Wi-Fi connection
3. Repair abnormal SD card status
4. Repair the problem of no sound in HC end rerecording
5. Fix the problem that LED display color is not correct in some states
