**How to configure motion detection recording in 96NI-ST series NVR**

Step 1: Click **Menu > Camera**

![Menu interface](image)

Step 2: Input **IP address**, **admin** and **password** of IP camera to add it.
Step 3: Click **Menu > Camera > Motion**. Select camera, enable **Motion detection**, configure the **Sensitivity** and then click **Full Screen**. (After this configuration you can click **Copy** to copy it to other cameras.)

Step 4: Click **Rule** to check that **Schedule** and **Triggering channel** are all right. (After this configuration you can click **Copy** to copy it to other cameras.)
Step 5: Click **Menu**> **Camera**> **Record**> **Encoding parameters**, select a camera and then configure **Main stream (Normal)** and **Main stream (Event)** to same parameters. *(Please kindly make sure that all parameters of normal and event are same for each camera.)*
