How to watch Smart Playback in NVR

Description

The smart playback function provides an easy way to get through the less effective information. When you select the smart playback mode, the system will analyze the video containing the motion or VCA information. It will mark it with **red color** and play it in **normal speed**, while the video without motion will be played in the **16-time speed** (the speed function can be configurable, -E/-Q is not supported). The smart playback rules and areas are configurable.

*Note:* This speed function is now supported by almost all -K/-I/-super I series NVR.

Preparation

To get the smart search result, the **Dual-VCA** must be enabled in NVR.

*Steps:*
1. Enter Configuration interface by Web.
2. Select **Video/Audio** on the top-left side and **Display Info. on Stream**.
3. Click **Enable Dual-VCA** and **Save** button.
