How to download multiple recordings

Hikvision device support download/export multiple recording at the same time.

This file will introduce three methods of multiple download recordings: local GUI,

web page and iVMS-4200 software.

Method 1: local GUI

On local GUI, we need turn to > Video. In this page, we could select search condition, time and camera channel which you want to download. After select, click "Start Search".

After search, it will show all the recordings of the channel 1 default, and if we want to check other cameras recording, we need to select the **Channel** to switch to other channel.

	17	D2	2022-06-17 01:16:34	2022-06-17 01:21:32			0	6

Method 2: Web page

Log in the device via IP address on IE browser, turn to Playback page, select the camera which you want to check, click the \pm button in the lower right corner. It will pop up the download configuration page, in this page, we could select the camera/type/time, after search we could select the recording files and download.

Method 3: iVMS-4200 software

Please download the newest version of iVMS-4200 software form the official web:

https://www.hikvision.com/en/support/download/software/ivms4200-series/

Run iVMS-4200 software, go to Remote Playback, select the device you want to check and click the download button, it will show the page of download for multiple cameras. In this page, you could choose **different time limit** and download simultaneously.

So if you want to download recordings from different time, we recommend you choose method 3 for better use.
