Any and all information, including, among others, wordings, pictures, graphs are the properties of Hangzhou Hikvision Digital Technology Co., Ltd. or its subsidiaries (hereinafter referred to be “Hikvision”). This user manual (hereinafter referred to be “the Manual”) cannot be reproduced, changed, translated, or distributed, partially or wholly, by any means, without the prior written permission of Hikvision. Unless otherwise stipulated, Hikvision does not make any warranties, guarantees or representations, express or implied, regarding to the Manual.

About this Manual
This Manual is applicable to All-in-One Server.
The Manual includes instructions for using and managing the product. Pictures, charts, images and all other information hereinafter are for description and explanation only. The information contained in the Manual is subject to change, without notice, due to firmware updates or other reasons. Please find the latest version in the company website (http://overseas.hikvision.com/en/).
Please use this user manual under the guidance of professionals.

Legal Disclaimer
TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, THE PRODUCT DESCRIBED, WITH ITS HARDWARE, SOFTWARE AND FIRMWARE, IS PROVIDED “AS IS”, WITH ALL FAULTS AND ERRORS, AND HIKVISON MAKES NO WARRANTIES, EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY, SATISFACTORY QUALITY, FITNESS FOR A PARTICULAR PURPOSE, AND NONINFRINGEMENT OF THIRD PARTY. IN NO EVENT WILL HIKVISON, ITS DIRECTORS, OFFICERS, EMPLOYEES, OR AGENTS BE LIABLE TO YOU FOR ANY SPECIAL, CONSEQUENTIAL, INCIDENTAL, OR INDIRECT DAMAGES, INCLUDING, AMONG OTHERS, DAMAGES FOR LOSS OF BUSINESS PROFITS, BUSINESS INTERRUPTION, OR LOSS OF DATA OR DOCUMENTATION, IN CONNECTION WITH THE USE OF THIS PRODUCT, EVEN IF HIKVISON HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.
REGARDING TO THE PRODUCT WITH INTERNET ACCESS, THE USE OF PRODUCT SHALL BE WHOLLY AT YOUR OWN RISKS. HIKVISON SHALL NOT TAKE ANY RESPONSIBILITIES FOR ABNORMAL OPERATION, PRIVACY LEAKAGE OR OTHER DAMAGES RESULTING FROM CYBER ATTACK, HACKER ATTACK, VIRUS INSPECTION, OR OTHER INTERNET SECURITY RISKS; HOWEVER, HIKVISON WILL PROVIDE TIMELY TECHNICAL SUPPORT IF REQUIRED.
SURVEILLANCE LAWS VARY BY JURISDICTION. PLEASE CHECK ALL RELEVANT LAWS IN YOUR JURISDICTION BEFORE USING THIS PRODUCT IN ORDER TO ENSURE THAT YOUR USE CONFORMS THE APPLICABLE LAW. HIKVISON SHALL NOT BE LIABLE IN THE EVENT THAT THIS PRODUCT IS USED WITH ILLEGITIMATE PURPOSES.
IN THE EVENT OF ANY CONFLICTS BETWEEN THIS MANUAL AND THE APPLICABLE LAW, THE LATER PREVAILS.
Regulatory Information

FCC Information

Please take attention that changes or modification not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

FCC compliance: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

FCC Conditions

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference.
2. This device must accept any interference received, including interference that may cause undesired operation.

EU Conformity Statement

This product and - if applicable - the supplied accessories too are marked with "CE" and comply therefore with the applicable harmonized European standards listed under the EMC Directive 2014/30/EU, the LVD Directive 2014/35/EU, the RoHS Directive 2011/65/EU.

2012/19/EU (WEEE directive): Products marked with this symbol cannot be disposed of as unsorted municipal waste in the European Union. For proper recycling, return this product to your local supplier upon the purchase of equivalent new equipment, or dispose of it at designated collection points. For more information see: www.recyclethis.info

2006/66/EC (battery directive): This product contains a battery that cannot be disposed of as unsorted municipal waste in the European Union. See the product documentation for specific battery information. The battery is marked with this symbol, which may include lettering to indicate cadmium (Cd), lead (Pb), or mercury (Hg). For proper recycling, return the battery to your supplier or to a designated collection point. For more information see: www.recyclethis.info

Industry Canada ICES-003 Compliance

This device meets the CAN ICES-3 (A)/NMB-3(A) standards requirements.
Applicable Models

This manual is applicable to the models listed in the following table.

<table>
<thead>
<tr>
<th>Product</th>
<th>Model</th>
</tr>
</thead>
<tbody>
<tr>
<td>DS-9000 series all-in-one server</td>
<td>DS-9000AI-S16-D</td>
</tr>
<tr>
<td>Blazer series iVMS station</td>
<td>Blazer Pro/128/16H</td>
</tr>
<tr>
<td></td>
<td>Blazer Pro/256/16H</td>
</tr>
</tbody>
</table>

Symbol Conventions

The symbols that may be found in this document are defined as follows.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="NOTE" /></td>
<td>Provides additional information to emphasize or supplement important points of the main text.</td>
</tr>
<tr>
<td><img src="image" alt="WARNING" /></td>
<td>Indicates a potentially hazardous situation, which if not avoided, could result in equipment damage, data loss, performance degradation, or unexpected results.</td>
</tr>
<tr>
<td><img src="image" alt="DANGER" /></td>
<td>Indicates a hazard with a high level of risk, which if not avoided, will result in death or serious injury.</td>
</tr>
</tbody>
</table>
Safety Instructions

- Proper configuration of all passwords and other security settings is the responsibility of the installer and/or end-user.
- In the use of the product, you must be in strict compliance with the electrical safety regulations of the nation and region. Please refer to technical specifications for detailed information.
- Input voltage should meet both the SELV (Safety Extra Low Voltage) and the Limited Power Source with 100~240 VAC or 12 VDC according to the IEC60950-1 standard. Please refer to technical specifications for detailed information.
- Do not connect several devices to one power adapter as adapter overload may cause over-heating or a fire hazard.
- Please make sure that the plug is firmly connected to the power socket.
- If smoke, odor or noise rise from the device, turn off the power at once and unplug the power cable, and then please contact the service center.

Preventive and Cautionary Tips

Before connecting and operating your device, please be advised of the following tips:

- Ensure unit is installed in a well-ventilated, dust-free environment.
- Unit is designed for indoor use only.
- Keep all liquids away from the device.
- Ensure environmental conditions meet factory specifications.
- Ensure unit is properly secured to a rack or shelf. Major shocks or jolts to the unit as a result of dropping it may cause damage to the sensitive electronics within the unit.
- Use the device in conjunction with an UPS if possible.
- Power down the unit before connecting and disconnecting accessories and peripherals.
- A factory recommended HDD should be used for this device.
- Improper use or replacement of the battery may result in hazard of explosion. Replace with the same or equivalent type only. Dispose of used batteries according to the instructions provided by the battery manufacturer.
Product Key Features

General
- Connectable to network cameras, network dome and encoders.
- Connectable to the third-party network cameras like ACTI, Arecont, AXIS, Bosch, Brickcom, Canon, PANASONIC, Pelco, SAMSUNG, SANYO, SONY, Vivotek and ZAVIO, and cameras that adopt ONVIF or PSIA protocol.
- Connectable to the smart IP cameras.
- H.265, H.265+, H.264, H.264+, MPEG4, and MJPEG (for Hikvision IP camera only) video formats.
- PAL/NTSC adaptive video inputs.
- Each channel supports dual-stream.
- For DS-9000AI-S16-D series and Blazer Pro/128/16H series, up to 128 network cameras can be added.
  For Blazer Pro/256/16H series, up to 256 network cameras can be added.
- Independent configuration for each channel, including resolution, frame rate, bit rate, image quality, etc.

Local Monitoring
- HDMI 1, HDMI 2, and VGA outputs are provided by both storage board and server board.
- Simultaneously previews and plays back image via different HDMI or VGA interfaces.
- Two HDMI interfaces with resolution up to 4K.
- Multiple screen display in live view is supported, and the display sequence of channels is adjustable.
- Live view screen can be switched in group. Manual switch and auto-switch are provided and the auto-switch interval is configurable.
- Quick setting menu is provided for live view.
- Motion detection, video tampering, video exception alarm and video loss alarm functions.
- Privacy mask.
- Connectable to the thermal network camera.
- Multiple PTZ protocols supported; PTZ preset, patrol and pattern.
- Zooming in by clicking the mouse and PTZ tracing by dragging mouse.

HDD Management
- Storage board supports 16 3.5-inch HDDs with up to 10 TB for each HDD. And hot swapping is allowed.
- Server board supports four 2.5-inch HDDs.
- Supports 8 network disks (NAS/IP SAN disk).
Supports S.M.A.R.T. and bad sector detection.
HDD group management.
Supports HDD standby function.
HDD property: redundancy, read-only, read/write (R/W).
HDD quota management; different capacity can be assigned to different channel.
RAID0, RAID1, RAID5, RAID 6, and RAID10 are supported.
Hot swapping RAID storage scheme, and can be enabled and disabled on your demand. And 16 arrays can be configured.
Supports disk clone to the eSATA disk.
Two mini SAS interfaces are provided.

Recording, Capture and Playback

Holiday recording schedule configuration.
Continuous and event video recording parameters.
Multiple recording types: manual, continuous, alarm, motion, motion | alarm, motion & alarm and VCA.
8 recording time periods with separated recording types.
Pre-record and post-record for alarm, motion detection for recording, and pre-record time for schedule and manual recording.
Searching video files by events (alarm input/motion detection).
Tag adding for record files, searching and playing back by tags.
Locking and unlocking record files.
Local redundant recording.
Normal/Smart/custom video playback mode.
Provides new playback interface with easy and flexible operation.
Searching and playing back video files by channel number, recording type, start time, end time, etc.
Smart search for the selected area in the video.
Zooming in when playback.
Reverse playback of multi-channel.
Supports pause, play reverse, speed up, speed down, skip forward, and skip backward when playback, and locating by dragging the mouse.
Supports thumbnails view and fast view during playback.
Up to 20-ch synchronous playback at 1080p real time.
Manual capture and playback of captured pictures.
Supports enabling H.264+ to ensure high video quality with lowered bitrate.

Files Management
Export video data by USB, SATA, or eSATA device.
Export video clips when playback.
Management and maintenance of backup devices.
Either Normal or Hot Spare working mode is configurable to constitute an N+1 hot spare system.

**Alarm and Exception**
- Configurable arming time of alarm input/output.
- Alarm for video loss, motion detection, tampering, abnormal signal, video input/output standard mismatch, illegal login, network disconnected, IP confliction, abnormal record/capture, HDD error, and HDD full, etc.
- VCA detection alarm is supported.
- VCA search for face detection, vehicle plate, behavior analysis, people counting and heat map.
- Alarm triggers full screen monitoring, audio alarm, notifying surveillance center, sending email and alarm output.
- Automatic restore when system is abnormal.

**Other Local Functions**
- Operable by front panel, mouse, or keyboard.
- Three-level user management; admin user is allowed to create many operating accounts and define their operating permission, which includes the limit to access any channel.
- Operation, alarm, exceptions and log recording and searching.
- Manually triggering and clearing alarms.
- Import and export of device configuration information.

**Network Functions**
- Both server board and storage board contain four self-adaptive 10M/100M/1000M network interfaces and provide the multi-address, load balance, and network fault-tolerance working modes.
- IPv6 is supported.
- TCP/IP protocol, DHCP, DNS, DDNS, NTP, SADP, SMTP, SNMP, NFS, and iSCSI are supported.
- TCP, UDP, and RTP for unicast.
- Auto/manual port mapping by UPnP™.
- Remote web browser access by HTTPS ensures high security.
- The ANR (Automatic Network Replenishment) function is supported, it enables the IP camera save the recording files in the local storage when the network is disconnected, and synchronizes the files to the device when the network is resumed.
- Remote reverse playback via RTSP.
- Supports accessing by the platform via ONVIF.
- Remote search, playback, download, locking, and unlocking of the record files.
- Supports downloading files broken transfer resume.
- Remote parameters setup; remote import/export of device parameters.
- Remote viewing of the device status, system logs, and alarm status.
- Remote keyboard operation.
- Remote locking and unlocking of control panel and mouse.
- Remote HDD formatting and program upgrading.
- Remote system restart and shutdown.
- RS-485 transparent channel transmission.
- Alarm and exception information can be sent to the remote host.
- Remotely start/stop recording.
- Remotely start/stop alarm output.
- Remote PTZ control.
- Two-way audio and voice broadcasting.
- Embedded WEB server.

**Development Scalability:**
- SDK for Windows system.
- Source code of application software for demo.
- Development support and training for application system.

**Operation System**
- Ubuntu Linux is installed when delivered.

Chapter 1 Introduction

1.1 Front Panel

**Purpose:**

The front panels of DS-9000A-S16-D and Blazer Pro/256/16H series device are shown below.

- **DS-9000A-S16-D Series**

![Figure 1-1 DS-9000A-S16-D Series](image1)

- **Blazer Pro/128/16H and Blazer Pro/256/16H Series**

![Figure 1-2 Blazer Pro/128/16H and Blazer Pro/256/16H Series](image2)
### Table 1-1 Description

<table>

</tbody>
</table>
| 2   | Power switch    | - Powers on/off device.  
                      - Solid blue: device is running. Solid red: device is shut down. |
| 3   | Muting switch   | - Turn on/off buzzer.  
                      - Solid blue: buzzer is turned off.  
                      - Unlit: buzzer is turned on.      |
| 4   | HDD status indicator | - Solid red: at least one HDD is installed.  
                          - Unlit: no HDD is detected.  
                          - Blinking red: HDD is reading/writing. |
| 5   | Tx/Rx status indicator | Blinking blue: network communication is normal. |
| 6   | USB interfaces  | 2 USB 2.0 interfaces to connect additional devices such as USB mouse and USB keyboard for server board. |
|     |                 | **NOTE**  
                      Connect USB devices like USB drive to USB interface in rear panel. |
| 7   | HDD sequence indicator | Shows the HDD installation slot. |

### 1.2 IR Remote Control Operations

The device may also be controlled with the included IR remote control, shown in Figure 1-3.

**NOTE**

Batteries (2×AAA) must be installed before operation.

The IR remote is set at the factory to control the device (using default Device ID# 255) without any additional steps. Device ID# 255 is the default universal device identification number shared by the devices. You may also pair an IR Remote to a specific device by changing the Device ID#, as follows:
1.2.1 Pairing (Enabling) the IR Remote to a Specific Device (optional)

You can pair an IR Remote to a specific device by creating a user-defined Device ID#. This feature is useful when using multiple IR Remotes and devices.

On the device:

Step 1 Go to **System > General**.

Step 2 Type a number (255 digits maximum) into the Device No. field.

On the IR Remote:

Step 3 Press the DEV button.

Step 4 Use the Number buttons to enter the Device ID# that was entered into the device.

Step 5 Press Enter button to accept the new Device ID#.

![Figure 1-3 Remote Control](image)

1.2.2 Unpairing (Disabling) an IR Remote from a Device

To unpair an IR Remote from a device so that the unit cannot control any device functions, proceed as follows:
Press the DEV key on the IR Remote. Any existing Device ID# will be erased from the unit’s memory and it will no longer function with the device.

![NOTE]

(Re)-enabling the IR Remote requires pairing to a device. See “Pairing the IR Remote to a Specific device (optional),” above.

The keys on the remote control closely resemble the ones on the front panel. See the table 1.4.
<table>
<thead>
<tr>
<th>No.</th>
<th>Name</th>
<th>Function Description</th>
</tr>
</thead>
</table>
|     | **POWER** ON/OFF | • **To Turn Power On:**  
- If User Has Not Changed the Default device Device ID# (255):  
1. Press Power On/Off button (1).  
- If User Has Changed the device Device ID#:  
1. Press DEV button.  
2. Press Number buttons to enter user-defined Device ID#.  
3. Press Enter button.  
4. Press Power button to start device.  

• **To Turn device Off:**  
- If User Is Logged On:  
1. Hold Power On/Off button (1) down for five seconds to display the “Yes/No” verification prompt.  
2. Use Up/Down Arrow buttons (12) to highlight desired selection.  
3. Press Enter button (12) to accept selection.  
- If User Is Not Logged On:  
1. Hold Power On/Off button (1) down for five seconds to display the user name/password prompt.  
2. Press the Enter button (12) to display the on-screen keyboard.  
3. Input the user name.  
4. Press the Enter button (12) to accept input and dismiss the on-screen keyboard.  
5. Use the Down Arrow button (12) to move to the “Password” field.  
6. Input password (use on-screen keyboard or numeric buttons (3) for numbers).  
7. Press the Enter button (12) to accept input and dismiss the on-screen keyboard.  
8. Press the OK button on the screen to accept input and display the Yes/No” verification prompt (use Up/Down Arrow buttons (12) to move between fields)  
9. Press Enter button (12) to accept selection.  

User name/password prompt depends on device is configuration.

**DEV**
- Enable IR Remote: Press DEV button, enter device Device ID# with number keys, press Enter to pair unit with the device.
- Disable IR Remote: Press DEV button to clear Device ID#; unit will no longer be paired with the device.

**Numerals**
- Switch to the corresponding channel in Live View or PTZ Control mode.
- Input numbers in Edit mode.

**EDIT**
- Delete characters before cursor.
- Check the checkbox and select the ON/OFF switch.

**A**
- Adjust focus in the PTZ Control menu.
- Switch on-screen keyboards (upper and lower case alphabet, symbols, and numerals).

**REC**
- Enter Manual Record setting menu.
- Call a PTZ preset by using the numeric buttons in PTZ control settings.
- Turn audio on/off in Playback mode.

**PLAY**
- Go to Playback mode.
- Auto scan in the PTZ Control menu.

**INFO**
- Reserved.

**VOIP**
- Switches between main and spot output.
- Zooms out the image in PTZ control mode.

**MENU**
- Return to Main menu (after successful login).
- N/A.
- Show/hide full screen in Playback mode.

**DIRECTION**
- Navigate between fields and menu items.
- Use Up/Down buttons to speed up/slow down recorded video, and Left/Right buttons to advance/rewind 30 secs in Playback mode.
- Cycle through channels in Live View mode.
- Control PTZ camera movement in PTZ control mode.

**ENTER**
- Confirm selection in any menu mode.

See “System Configuration” section.
Checks checkbox
Play or pause video in Playback mode
Advance video a single frame in single-frame Playback mode
Stop/start auto switch in auto-switch mode

Switch between channels in Synchronous Playback mode

1.2.3 Troubleshooting

**NOTE**

Make sure you have installed batteries properly in the remote control. And you have to aim the remote control at the IR receiver in the front panel.

If there is no response after you press any button on the remote, follow the procedure below to troubleshoot.

**Step 1** Go to **System > General** by operating the front control panel or the mouse.

**Step 2** Check and remember device ID#. The default ID# is 255. This ID# is valid for all the IR remote controls.

**Step 3** Press the DEV button on the remote control.

**Step 4** Enter the device ID# you set in step 2.

**Step 5** Press the ENTER button on the remote.

If the Status indicator on the front panel turns blue, the remote control is operating properly. If the Status indicator does not turn blue and there is still no response from the remote, please check the following:

- Batteries are installed correctly and the polarities of the batteries are not reversed.
Batteries are fresh and not out of charge.
IR receiver is not obstructed.
No fluorescent lamp is used nearby

If the remote still can’t function properly, please change a remote and try again, or contact the device provider.

1.3 USB Mouse Operation

A regular 3-button (Left/Right/Scroll-wheel) USB mouse can also be used with this device. To use a USB mouse:

Step 1 Plug USB mouse into one of the USB interfaces on the front panel of the device.

Step 2 The mouse should automatically be detected. If in a rare case that the mouse is not detected, the possible reason may be that the two devices are not compatible, please refer to the recommended the device list from your provider.

The operation of the mouse:

<table>

Chapter 2 Getting Started

2.1 Start up the Device

*Purpose:*
Proper startup and shutdown procedures are crucial to expanding the life of the device.

Step 1 Connect a display with the device.

Step 2 Connect the power supply interface and electrical socket with delivered power cable.

It is HIGHLY recommended that an Uninterruptible Power Supply (UPS) is used. The power switch on the front panel should be red, indicating the device is receiving the power.

2.2 Activate the Device

*Purpose:*
For the first-time access, you need to activate the device by setting an admin password. No operation is allowed before activation. You can also activate the device via Web Browser, SADP or Client Software.

Step 1 Input the same password in the text field of *Create New Password* and *Confirm New Password*.

![NOTE]
You can click the to show the characters input.

![Figure 2-1 Setting Admin Password]
WARNING

We highly recommend you create a strong password of your own choosing (Using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers, and special characters.) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

Step 2 In the **IP Camera Activation** text field, enter the password to activate the IP camera(s) connected to the device.

Step 3 Optionally, check the **Export GUID** to export the GUID for future password resetting.

Step 4 Click **OK** to save the password and activate the device.

**NOTE**

- After the device is activated, you should properly keep the password.
- When you have enabled the **Export GUID**, continue to export the GUID file to the USB flash driver for the future password resetting.
- You can duplicate the password to the IP cameras that are connected with default protocol.

### 2.3 Configure Unlock Pattern for Login

For the admin user, you can configure the unlock pattern for device login.

Step 1 After the device is activated, you can enter the following interface to configure the device unlock pattern.

Step 2 Use the mouse to draw a pattern among the 9 dots on the screen. Release the mouse when the pattern is done.
Connect at least 4 dots to draw the pattern.
Each dot can be connected for once only.

Step 3 Draw the same pattern again to confirm it. When the two patterns match, the pattern is configured successfully.

If the two patterns are different, you must set the pattern again.

2.4 Login to the Device
2.4.1 Log in via Unlock Pattern

Only the admin user has the permission to unlock the device.
Please configure the pattern first before unlocking. Please refer to Chapter 2.2 Activate the Device

Purpose:
For the first-time access, you need to activate the device by setting an admin password. No operation is allowed before activation. You can also activate the device via Web Browser, SADP or Client Software.
Step 1 Input the same password in the text field of Create New Password and Confirm New Password.

![NOTE]
You can click the ▻ to show the characters input.

![Figure 2-3 Setting Admin Password]

**WARNING**

We highly recommend you create a strong password of your own choosing (Using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers, and special characters.) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

Step 2 In the IP Camera Activation text field, enter the password to activate the IP camera(s) connected to the device.

Step 3 Optionally, check the Export GUID to export the GUID for future password resetting.

Step 4 Click OK to save the password and activate the device.
• After the device is activated, you should properly keep the password.
• When you have enabled the Export GUID, continue to export the GUID file to the USB flash driver for the future password resetting.
• You can duplicate the password to the IP cameras that are connected with default protocol.
• Configure Unlock Pattern for Login.

Step 5 Right click the mouse on the screen and select the menu to enter the interface.

Step 6 Draw the pre-defined pattern to unlock to enter the menu operation.

• If you have forgotten your pattern, you can select the Forgot My Pattern or Switch User option to enter the normal login dialog box.
• When the pattern you draw is different from the pattern you have configured, you should try again.
• If you have drawn the wrong pattern for more than 5 times, the system will switch to the normal login mode automatically.

2.4.2 Log in via Password

Purpose:

If device has logged out, you must login the device before operating the menu and other functions.
Step 1 Select the **User Name** in the dropdown list.

Step 2 Input password.

Step 3 Click **OK** to log in.

![Figure 2-5 Login Interface](image)

**NOTE**

- When you forget the password of the admin, you can click **Forgot Password** to reset the password.
- In the Login dialog box, if you enter the wrong password 7 times, the current user account will be locked for 60 seconds.

### 2.5 Enter Wizard to Configure Quick Basic Settings

By default, the Setup Wizard starts once the device has loaded.

The Setup Wizard can walk you through some important settings of the device. If you don’t want to use the Setup Wizard at that moment, click the **Exit** button.

Step 1 Configure the date and time on the Date and Time Setup interface.
Step 2 After the time settings, click **Next** to enter the Network Setup Wizard window, as shown in the following figure.

![Network Setup Wizard](image)

**Figure 2-7 Network Settings**

Step 3 Click **Next** after you configured the network parameters, which takes you to the **HDD Management** window.
Step 4 To initialize the HDD, click the **Init** button. Initialization removes all the data saved in the HDD.

Step 5 Click **Next**. You enter the **Camera Setup** interface to add the IP cameras.

1) Click **Search** to search the online IP Camera. Before adding the camera, make sure the IP camera to be added is in active status.

2) Click the **Add** to add the camera.

---

**NOTE**

If the camera is in inactive status, you can select the camera from the list and click **Activate** to activate the cameras.

---

Step 6 Enter the Platform Access and configure the Hik-Connect settings.
Step 7 Click **Next** to enter the **Change Password** interface to create the new admin password if required.

![Change Password](image)

**Figure 2-11 Change Password**

**NOTE**

You can enter click the ▶️ to show the characters input.

1) Check the checkbox of **New Admin Password**.
2) Enter the original password in the text field of **Admin Password**
3) Input the same password in the text field of **New Password** and **Confirm**.
4) Check the **Unlock Pattern** to enable the unlock pattern login.
We highly recommend you create a strong password of your own choosing (Using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers, and special characters.) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

Step 8 Click OK to complete the startup Setup Wizard.

2.6 Enter Main Menu

After you have completed the wizard, you can right click on the screen to enter the main menu bar. Refer to the following figure and table for the description of main menu and sub-menus.

![Main Menu Bar](image-url)

**Table 2-1 Description of Icons**

<table>

</tbody>
</table>
2.7 System Operation

2.7.1 Log out

*Purpose:*
After logging out, the monitor turns to the live view mode and if you want to perform any operations, you need to enter user name and password to log in again.

Step 1 Click on the menu bar.
Step 2 Click Logout.

*i* NOTE
After you have logged out the system, menu operation on the screen is invalid. It is required to input a user name and password to unlock the system.

2.7.2 Shut Down the Device

Step 1 Click on the menu bar.
Step 2 Click the Shutdown button.
Step 3 Click the Yes button.

*i* NOTE
Do not press the POWER button again when the system is shutting down.

2.7.3 Reboot the Device

From the Shutdown menu, you can also reboot the device.

Step 1 Click on the menu bar.
Step 2 Click Reboot to reboot the device.
Chapter 3 Camera Management

3.1 Add the IP Cameras

3.1.1 Add the IP Camera Manually

_Purpose:_

Before you can get live video or record the video files, you should add the network cameras to the connection list of the device.

_Before you start:_

Ensure the network connection is valid and correct, and the IP camera to add has already been activated.

Step 1 Click on the main menu bar to enter the Camera Management.

Step 2 Click the **Custom Add** tab on the title bar or click in the idle channel window to enter the Add IP Camera interface.

Step 3 Enter IP address, protocol, management port, and other information of the IP camera to add.

Step 4 Enter the login user name and password of the IP camera.

![Figure 3-1 Add IP Camera](image-url)
Step 5 Click **Add** to finish the adding of the IP camera.

Step 6 (Optional) Click **Continue to Add** to continue to add other IP cameras.

### 3.1.2 Add the Automatically Searched Online IP Cameras

Step 1 On the Camera Management interface, click the **Online Device** panel to expand the Online Device interface.

Step 2 Select the automatically searched online devices.

Step 3 Click **Add**.

![Figure 3-2 Add IP Camera](image)

**NOTE**

If the IP camera to add has not been activated, you can activate it from the IP camera list on the camera management interface.

### 3.2 Enable the H.265 Stream Access

The device can automatically switch to the H.265 stream of IP camera (which supports H.265 video format) for the initial access.

Step 1 Go to **More Settings > H.265 Auto Switch Configuration** at the top taskbar.

Step 2 Check the checkbox of **Enable H.265 (For Initial Access)**.

Step 3 Click **OK**.

### 3.3 Upgrade the IP Camera

The IP camera can be remotely upgraded through the device.

**NOTE**

Plug the U-flash drive with the IP camera’s firmware upgrade file to the device.

Step 1 On the camera management interface, select a camera.
Step 2 Go to **More Settings > Upgrade** at the top taskbar.

Step 3 Select the firmware upgrade file from the U-flash drive.

Step 4 Click **Upgrade**.

**Result:**

The IP camera will reboot automatically after the upgrading completes.

### 3.4 Configure the Customized Protocols

**Purpose**

To connect the network cameras which are not configured with the standard protocols, you can configure the customized protocols for them. The system provides 16 customized protocols.

Step 1 Click **Protocol** at the top taskbar to enter the protocol management interface.

![Protocol Management](image)

**Figure 3-3 Protocol Management**

Step 2 Select the protocol type of transmission and choose the transfer protocols.

- **Type:** The network camera adopting custom protocol must support getting stream through standard RTSP.
- **Path:** you have to contact the manufacturer of the network camera to consult the URL (uniform resource locator) for getting main stream and sub-stream.
- The format of the URL is: `[Type]://[IP Address of the network camera]:[Port]/[Path]`
The protocol type and the transfer protocols must be supported by the connected IP camera.

Step 3 Click **OK** to save the settings.

**Result:**

After adding the customized protocols, you can see the protocol name is listed in the drop-down list.
Chapter 4 Camera Settings

4.1 Configure OSD Settings

*Purpose:*
You can configure the OSD (On-screen Display) settings for the camera, including date/time, camera name, etc.

**Step 1** Go to **Camera > Display**.

**Step 2** Select the camera from the drop-down list.

**Step 3** Edit the name in the **Camera Name** text field.

**Step 4** Check the checkbox of the **Display Name**, **Display Date** and **Display Week** if you want to show the information on the image.

**Step 5** Set the date format, time format, and display mode.

**Step 6** You can use the mouse to click and drag the text frame on the preview window to adjust the OSD position.

**Step 7** Click the **Apply** button to apply the settings.

![Figure 4-1 OSD Configuration Interface](image)
4.2 Configure Privacy Mask

*Purpose:*

The privacy mask can be used to protect personal privacy by concealing parts of the image from view or recording with a masked area.

Step 1 Go to **Camera > Privacy Mask.**

Step 2 Select the camera to set privacy mask.

Step 3 Click the checkbox of **Enable** to enable this feature.

Step 4 Use the mouse to draw a zone on the window. The zones will be marked with different frame colors.

![Privacy Mask Settings Interface](image)

Figure 4-2 Privacy Mask Settings Interface

**NOTE**

Up to 4 privacy masks zones can be configured and the size of each area can be adjusted.

**Related Operation:**

The configured privacy mask zones on the window can be cleared by clicking the corresponding Clear Zone1-4 icons on the right side of the window, or click **Clear All** to clear all zones.

Step 5 Click **Apply** to save the settings.
4.3 Configure the Video Parameters

*Purpose:*
You can customize the image parameters including the brightness, contrast, saturation for the live view and recording effect.

Step 1 Go to **Camera > Display.**

Step 2 Select the camera from the drop-down list.

Step 3 Adjust the slider or click on the up/down arrow to set the value of the brightness, contrast or saturation.

Step 4 Click **Apply** to save the settings.

4.4 Configure the Day/Night Switch

The camera can be set to day, night or auto switch mode according to the surrounding illumination conditions.

Step 1 Go to **Camera > Display.**

Step 2 Select the camera from the drop-down list.

Step 3 Select the day/night switch mode to **Day, Night, Auto** or **Auto-Switch.**

   **Auto:** The camera switches between the day mode and the night mode according to the illumination automatically.
   
   The sensitivity ranges from 0 to 7, and the higher sensitivity results in the more easily to trigger the mode switch.
   
   The switch time refers to the interval time between the day/night switch. You can set it from 5 sec to 120 sec.

   **Auto-Switch:** The camera switches the day mode and the night mode according to the start time and end time you set.

Step 4 Click the **Apply** to save the settings.

4.5 Configure Other Camera Parameters

For the connected camera, you can configure the camera parameters including the exposure mode, backlight and image enhancement.

Step 1 Go to **Camera > Display.**

Step 2 Select the camera from the drop-down list.

Step 3 Configure the camera parameters.
Exposure: Set the exposure time (1/10000 to 1 sec) of camera. The larger exposure value results in the brighter image.

Backlight: Set the wide dynamic range (0 to 100) of the camera. When the surrounding illumination and the object have larger difference in brightness, you should set the WDR value.

Image Enhancement: For optimized image contrast enhancement.

Step 4 Click the **Apply** to save the settings.
Chapter 5 Live View

Live view shows you the video image getting from each camera in real time.

5.1 Start Live View

Click \( \Rightarrow \) on the main menu bar to enter the live view.

- You can select a window and double click a camera from the list to play the video from the camera in the selected window.
- Use the toolbar at the playing window bottom to realize the capture, instant playback, audio on/off, digital zoom, live view strategy, show information and start/stop recording, etc.

5.1.1 Digital Zoom

Digital Zoom is for zooming in the live image. You can zoom in the image to different proportions (1 to 16X).

Step 1 In the live view mode, click \( \Rightarrow \) from the toolbar to enter the digital zoom interface.

Step 2 You can move the sliding bar or scroll the mouse wheel to zoom in/out the image to different proportions (1 to 16X).

5.1.2 3D Positioning

3D Positioning (for I series device) is for zooming in/out the specific area of live image.
Step 1 In the live view mode, click the \[3D\] to enter the 3D positioning mode.

Step 2 Operate the zoom in/out in the image.

- **Zoom in**
  
  Use the left key of mouse to click on the desired position in the video image and drag a rectangle area in the lower right direction to realize zoom in.

- **Zoom out**
  
  Use the left key of mouse to drag a rectangle area in the upper left direction to move the position to the center and enable the rectangle area to zoom out.

### 5.1.3 Live View Strategy

Step 1 In the live view mode, click \[\rightarrow\] to enter the digital zoom operation interface in full screen mode.

Step 2 Select the live view strategy to **Real-time**, **Balanced** or **Fluency**.

### 5.2 Target Detection

In live view mode, the target detection function can be used to detect the human motion/face/vehicle/human body during the last 5 seconds and the following 10 seconds.

Step 1 In the live view mode, click **Target Detection** tab to enter the target detection interface.

Step 2 Check the checkbox of the icons to select different detection types: motion detection (\[\triangle\]), vehicle detection (\[\car\]), face detection (\[\person\]) and human body detection (\[\body\]).

Step 3 You can select the historical analysis (\[\clock\]) or the real-time analysis (\[\message\]) to obtain the results.
Result:

The smart analysis results of the detection are displayed in the list. Optionally, click a result in list to play the related video.

5.3 Configure Live View Settings

Live View settings can be customized according to different needs. You can configure the output interface, dwell time for screen to be shown, mute or turning on the audio, the screen number for each channel, etc.

Step 1 Go to **System > Live View > General**.

![Figure 5-3 Live View-General](image)

Step 2 Configure the live view parameters.

- **Video Output Interface**: Select the video output to configure.
- **Live View Mode**: Select the display mode for live view, e.g., 2*2, 1*5, etc.
- **Dwell Time**: The time in seconds to dwell between switching of cameras when enabling auto-switch in Live View.
- **Enable Audio Output**: Enable/disable audio output for the selected video output.
- **Volume**: Adjust the volume of live view, playback and two-way audio for the selected output interface.
- **Event Output**: Select the output to show event video.
- **Full Screen Monitoring Dwell Time**: Set the time in seconds to show alarm event screen.

Step 3 Click **OK** to save the settings.

### 5.4 Configure Live View Layout

**Step 1** Go to **System** > **Live View** > **View Settings**.

**Step 2** Select the video output interface, e.g., HDMI/ VGA or channel-zero.

**Step 3** Select a window division mode from the toolbar.

**Step 4** Select a division window, and double-click on the camera from the list to set the camera to the window.

You can enter the number in the text field to quickly search the camera from the list.
You can also click-and-drag the camera to the desired window on the live view interface to set the camera order.

**Related Operation:**

- Click [ ] button to start live view for all the channels.
- Click [ ] to stop all the live view.

Step 5 Click **Apply** to save the settings.

### 5.5 Configure Auto-Switch of Cameras

You can set the auto-switch of cameras to play in different display modes.

**Step 1** Go to **System > Live View > General.**

**Step 2** Set the video output interface, live view mode and dwell time.

- **Video Output Interface:** Select the video output interface.
- **Live View Mode:** Select the display mode for live view, e.g., 2*2, 1*5, etc.
- **Dwell Time:** The time in seconds to dwell between switching of cameras when enabling auto-switch. The range is from 5s to 300s.

**Step 3** Go to **View Settings** to set the view layout.

**Step 4** Click **OK** to save the settings.

### 5.6 Configure Channel-zero Encoding

**Purpose:**

You can enable the channel-zero encoding when you need to get a remote view of many channels in real time from web browser or CMS (Client Management System) software, in order to decrease the bandwidth requirement without affecting the image quality.

**Step 1** Go to **System > Live View > General.**

**Step 2** Select the video output interface to **Channel-Zero.**

**Step 3** Go to **System > Live View > Channel-Zero.**

**Step 4** Check the checkbox to enable the channel-zero.
Step 5 Configure the **Frame Rate**, **Max. Bitrate Mode** and Max. Bitrate. The higher frame rate and bitrate settings result in the higher requirement of bandwidth.

Step 6 Click **Apply**.

**Result:**

You can view all of the channels in one screen using the CMS or web browser.

### 5.7 Using an Auxiliary Monitor

Certain features of the Live View are also available while in an Aux monitor. These features include:

- **Single Screen**: Switch to a full screen display of the selected camera. Camera can be selected from a dropdown list.
- **Multi-screen**: Switch between different display layout options. Layout options can be selected from a dropdown list.
- **Next Screen**: When displaying less than the maximum number of cameras in Live View, clicking this feature will switch to the next set of displays.
- **Playback**: Enter into Playback mode.
- **PTZ Control**: Enter PTZ Control mode.
- **Main Monitor**: Enter Main operation mode.

**NOTE**

In the live view mode of the main output monitor, the menu operation is not available while Aux output mode is enabled.
Chapter 6 PTZ Control

6.1 PTZ Control Wizard

Before you start
Please make sure the connected IP camera supports the PTZ function and is properly connected.

Purpose
Follow the PTZ control wizard to guide you through the basic PTZ operation.

Step 1 Click on the quick settings toolbar of the PTZ camera live view. The PTZ control wizard pops up as below.

Step 2 Follow the wizard to adjust the PTZ view, focus, and zoom in/out the camera.

Step 3 (Optional) Check Do not show this prompt again.

Step 4 Click OK to exit.

6.2 Configure PTZ Parameters

Purpose
Follow the procedure to set the parameters for PTZ. The configuration of the PTZ parameters should be done before you control the PTZ camera.
Step 1 Click on the quick settings toolbar of the PTZ camera live view. The PTZ control panel displays on the right of the interface.

Step 2 Click **PTZ Parameters Settings** to set the PTZ parameters.

![PTZ Parameters Settings](image)

Figure 6-2 PTZ Parameters Settings

Step 3 Edit the parameters of the PTZ camera.

All the parameters should be exactly the same as the PTZ camera parameters.

Step 4 Click **OK** to save the settings.

### 6.3 Set PTZ Presets, Patrols & Patterns

**Before you start:**

Please make sure that the presets, patrols and patterns should be supported by PTZ protocols.

#### 6.3.1 Set a Preset

**Purpose:**

Follow the steps to set the preset location which you want the PTZ camera to point to when an event takes place.

Step 1 Click on the quick settings toolbar of the PTZ camera live view.
The PTZ control panel displays on the right of the interface.

Step 2 Use the directional buttons on the PTZ control panel to wheel the camera to the location where you want to set preset, and the zoom and focus operations can be recorded in the preset as well.

Step 3 Click in the lower right corner of live view to set the preset.

<table>
<thead>
<tr>
<th>1</th>
<th>Preset 1</th>
<th>Call</th>
<th>Apply</th>
<th>Cancel</th>
</tr>
</thead>
</table>

Figure 6-3 Set Preset

Step 4 Select the preset No. (1~255) from the drop-down list.

Step 5 Enter the preset name in the text field.

Step 6 Click Apply to save the preset.

Step 7 Repeat steps 2-6 to save more presets.

Step 8 (Optional) Click Cancel to cancel the location information of the preset.

Step 9 (Optional) Click in the lower right corner of live view to view the configured presets.

Figure 6-4 View the Configured Presets

6.3.2 Call a Preset

**Purpose:**

This feature enables the camera to point to a specified position such as a window when an event takes place.

Step 1 Click on the quick settings toolbar of the PTZ camera live view.

Step 2 Click in the lower right corner of live view.

Step 3 Select the preset No. from the drop-down list.

Step 4 Click Call to call it.

<table>
<thead>
<tr>
<th>1</th>
<th>Preset 1</th>
<th>Call</th>
<th>Apply</th>
<th>Cancel</th>
</tr>
</thead>
</table>

Figure 6-5 Call Preset (1)

Or click in the lower right corner of live view, and click the configured preset to call it.
6.3.3 Set a Patrol

**Purpose:**

Patrols can be set to move the PTZ to different key points and have it stay there for a set duration before moving on to the next key point. The key points are corresponding to the presets.

**Step 1** Click on the quick settings toolbar of the PTZ camera live view.

The PTZ control panel displays on the right of the interface.

**Step 2** Click **Patrol** to configure patrol.

**Step 3** Select the patrol No. in the text field.

**Step 4** Click **Set** to enter the Patrol Settings interface.

**Step 5** Click to add key point for the patrol.
1) Configure key point parameters.

**Preset:** It determines the order at which the PTZ will follow while cycling through the patrol.

**Speed:** It defines the speed at which the PTZ will move from one key point to the next.

**Duration:** It refers to the time span to stay at the corresponding key point.

2) Click **Apply** to save the key points to the patrol.

**Step 6 (Optional)** Click **Edit Key Point** to edit the added key point.

**Step 7 (Optional)** Select a key point and click **X** to delete it.

**Step 8 (Optional)** Click **up** or **down** to adjust the key point order.

**Step 9** Click **Apply** to save the settings of the patrol.

**Step 10** Repeat steps 3-9 to set more patrols.

### 6.3.4 Call a Patrol

**Purpose:**

Calling a patrol makes the PTZ to move according to the predefined patrol path.

**Step 1** Click **Patrol** on the quick settings toolbar of the PTZ camera live view.
The PTZ control panel displays on the right of the interface.

**Step 2** Click **Patrol** on the PTZ control panel.

![Figure 6-11 Patrol Configuration](image)

Step 3 Select a patrol in the text field.

Step 4 Click **Call** to call it.

Step 5 (Optional) Click **Stop** to stop calling it.

### 6.3.5 Set a Pattern

**Purpose:**
Patterns can be set by recording the movement of the PTZ. You can call the pattern to make the PTZ movement according to the predefined path.

Step 1 Click 🌲 on the quick settings toolbar of the PTZ camera live view.

The PTZ control panel displays on the right of the interface.

Step 2 Click **Pattern** to configure pattern.

![Figure 6-12 Pattern Configuration](image)

Step 3 Select the pattern No. in the text field.

Step 4 Set the pattern.

1) Click **Record** to start recording.

2) Click corresponding buttons on the control panel to move the PTZ camera.

3) Click **Stop** to stop recording.

The movement of the PTZ is recorded as the pattern.

Step 5 Repeat steps 3-4 to set more patterns.
6.3.6 Call a Pattern

*Purpose:*
Follow the procedure to move the PTZ camera according to the predefined patterns.

Step 1 Click on the quick settings toolbar of the PTZ camera live view.

The PTZ control panel displays on the right of the interface.

Step 2 Click **Pattern** to configure pattern.

![Pattern Configuration](image)

Figure 6-13 Pattern Configuration

Step 3 Select a pattern in the text field.

Step 4 Click **Call** to call it.

Step 5 (Optional) Click **Stop** to stop calling it.

6.3.7 Set Linear Scan Limits

*Before you start:*
Please make sure the connected IP camera supports the PTZ function, and is properly connected.

*Purpose:*
The linear scan can be enabled to trigger the scan in the horizontal direction in the predefined range.

*NOTE*
This function is supported by some certain models.

Step 1 Click on the quick settings toolbar of the PTZ camera live view.

The PTZ control panel displays on the right of the interface.

Step 2 Click the directional buttons to wheel the camera to the location where you want to set the limit, and click **Left Limit** or **Right Limit** to link the location to the corresponding limit.
The speed dome starts linear scan from the left limit to the right limit, and you must set the left limit on the left side of the right limit, as well the angle from the left limit to the right limit should be no more than 180º.

6.3.8 Call Linear Scan

Before operating this function, make sure the connected camera supports the linear scan and is in HIKVISION protocol.

**Purpose:**
Follow the procedure to call the linear scan in the predefined scan range.

**Step 1** Click on the quick settings toolbar of the PTZ camera live view. The PTZ control panel displays on the right of the interface.

**Step 2** Click **Linear Scan** to start the linear scan and click it again to stop it.

**Step 3** (Optional) Click **Restore** to clear the defined left limit and right limit data.

Reboot the camera to take the settings into effect.

6.3.9 One-touch Park

Before operating this function, make sure the connected camera supports the linear scan and is in HIKVISION protocol.

**Purpose**
For some certain model of the speed dome, it can be configured to start a predefined park action (scan, preset, patrol and etc.) automatically after a period of inactivity (park time).

**Step 1** Click on the quick settings toolbar of the PTZ camera live view. The PTZ control panel displays on the right of the interface.

**Step 2** Click **Park (Quick Patrol)**, **Park (Patrol 1)** or **Park (Preset 1)** to activate the park action.

**Park (Quick Patrol):** The dome starts patrol from the predefined preset 1 to preset 32 in order after the park time. The undefined preset will be skipped.
**Park (Patrol 1):** The dome starts moving according to the predefined patrol 1 path after the park time.

**Park (Preset 1):** The dome moves to the predefined preset 1 location after the park time.

**NOTE**

The park time can only be set via the speed dome configuration interface. The value is 5s by default.

Step 3 Click **Stop Park (Quick Patrol), Stop Park (Patrol 1) or Stop Park (Preset 1)** to inactivate it.

### 6.4 Auxiliary Functions

**Before you start**

Please make sure the connected IP camera supports the PTZ function, and is properly connected.

**Purpose**

You can operate the auxiliary functions including light, wiper, 3D positioning, and center on the PTZ control panel.

Step 1 Click **on the quick settings toolbar of the PTZ camera live view.**

The PTZ control panel displays on the right of the interface.

Step 2 Click **Aux Function.**

![Aux Function Configuration](image)

Figure 6-14 Aux Function Configuration

Step 3 Click the icons to operate the aux functions. See the table for the description of the icons.
<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>

</tbody>
</table>
Chapter 7 Storage

7.1 Storage Device Management

7.1.1 Install the HDD

Before startup of the device, install and connect the HDD to the device. Refer to the Quick Start Guide for the installation instructions.

7.1.2 Add the Network Disk

You can add the allocated NAS or disk of IP SAN to device, and use it as network HDD. Up to 8 network disks can be added.

Adding NAS

Step 1 Go to Storage > Storage Device.

Step 2 Click Add to enter the Custom Add interface.

Step 3 Select the NetHDD from the drop-down list.

Step 4 Select the type to NAS.

Step 5 Enter the NetHDD IP address in the text field.

Step 6 Click Search to search the available NAS disks.
Step 7 Select the NAS disk from the list shown below, or you can manually enter the directory in the text field of NetHDD Directory.

Step 8 Click the OK to complete the adding of the NAS disk.

**Result:**

After having successfully added the NAS disk, return to the HDD Information menu. The added NetHDD will be displayed in the list.

**Adding IP SAN**

Step 1 Go to **Storage > Storage Device**.

Step 2 Click **Add** to enter the Custom Add interface.

Step 3 Select the NetHDD from the drop-down list.

Step 4 Select the type to IP SAN.

Step 5 Enter the NetHDD IP address in the text field.

Step 6 Click **Search** to search the available IP SAN disks.

Step 7 Select the IP SAN disk from the list shown below.

Step 8 Click **OK** to complete the adding of the IP SAN disk.
Up to 1 IP SAN disk can be added.

<table>
<thead>
<tr>
<th>Custom Add</th>
</tr>
</thead>
<tbody>
<tr>
<td>NetHDD</td>
</tr>
<tr>
<td>Type</td>
</tr>
<tr>
<td>NetHDD IP</td>
</tr>
<tr>
<td>NetHDD Directory</td>
</tr>
</tbody>
</table>

Result:

After having successfully added the IP SAN disk, return to the HDD Information menu. The added NetHDD will be displayed in the list.

**NOTE**

If the installed HDD or NetHDD is uninitialized, please select it and click the **Init** button for initialization.

### 7.1.3 Configure eSATA for Data Storage

When there is an external eSATA device connected to device, you can configure eSATA for the data storage, and you can manage the eSATA in the device.

Step 1 Click **Storage>Advanced**.

Step 2 Select the eSATA type to Export or Record/Capture from the dropdown list of **eSATA**.

**Export**: use the eSATA for backup.

**Record/Capture**: use the eSATA for record/capture. Refer to the following steps for operating instructions.
Step 3 When the eSATA type is selected to Record/Capture, enter the storage device interface.

Step 4 Edit the property of the selected eSATA, or initialize it is required.

### 7.2 Storage Mode

#### 7.2.1 Configure HDD Group

**Purpose:**

Multiple HDDs can be managed in groups. Video from specified channels can be recorded onto a particular HDD group through HDD settings.

Step 1 Go to **Storage > Storage Device**.

Step 2 Check the checkbox to select the HDD to set the group.

Step 3 Click to enter the Local HDD Settings interface.
Step 4 Select the Group number for the current HDD.

Step 5 Click **OK**.

![NOTE]

Regroup the cameras for HDD if the HDD group number is changed.

Step 6 Go to **Storage**> **Storage Mode**.

Step 7 Check the checkbox of **Group** tab.

Step 8 Select the group No. from the list.

Step 9 Check the checkbox to select the IP camera (s) to record/capture on the HDD group.
Step 10 Click **Apply**.

![NOTE]

Reboot the device to activate the new storage mode settings.

7.2.2 Configure HDD Quota

**Purpose:**

Each camera can be configured with allocated quota for the storage of recorded files or captured pictures.

Step 1 Go to **Storage > Storage Mode**.

Step 2 Check the checkbox of **Quota** tab.

Step 3 Select a camera to set quota.

Step 4 Enter the storage capacity in the text fields of **Max. Record Capacity (GB)** and **Max. Picture Capacity (GB)**.
**Step 5 (Optional)** You can click **Copy to** if you want to copy the quota settings of the current camera to other cameras.

**Step 6** Click the **Apply** button to apply the settings. Reboot the device to activate the new storage mode settings.

![Figure 7-7 Storage Mode-HDD Quota](image)

**NOTE**

When the quota capacity is set to 0, all cameras will use the total capacity of HDD for record and picture capture.

### 7.2.3 Configure Data Release

**Purpose:**

Enable smart release function and set the quota radio between the normal video and important video. After these, the device immigrates the important video from the normal video quota to the quota of important video. The device will automatically delete the expired videos. The function greatly improves the utility rate of space without consuming R/W performance.

**Step 1** Go to **Storage > Storage Mode**.
Step 2 Select **Mode** as **Smart Release**.

Step 3 Adjust the **Quota Radio** between the normal video and important video. You can view the **Estimated Saving Time** for the continuous video and import video.

- **Estimated Saving Time**: Calculated based on the quota radio, storage capacity, and video size of last week. Expired continuous videos will be deleted. The time updates every minute.

Step 4 Click **Apply**.

Step 5 Click **Yes** on popup message dialog to reboot device.

Step 6 Optionally, go to **Maintenance > System Info > Smart Release Status** to view release status for each channel.

### 7.3 Recording Parameters

#### 7.3.1 Main Stream

The Main Stream refers to the primary stream that affects data recorded to the hard disk drive and will directly determine your recording quality and image size.

Comparing with the sub-stream, the main stream can provide a higher quality video with higher resolution and frame rate.

**Frame Rate** (FPS - Frames Per Second): refers to how many frames are captured each second. A higher frame rate is advantageous when there is movement in the video stream, as it maintains image quality throughout.

**Resolution**: Image resolution is a measure of how much detail a digital image can hold: the greater the resolution, the greater the level of detail. Resolution can be specified as the number of pixel-columns (width) by the number of pixel-rows (height), e.g., 1024×768.
Bitrate: The bit rate (in kbit/s or Mbit/s) is often referred to as speed, but actually defines the number of bits/time unit and not distance/time unit.

Enable H.264+ Mode: The H.264+ mode helps to ensure the high video quality with a lowered bitrate. It can effectively reduces the need of bandwidth and HDD storage space.

**NOTE**

A higher resolution, frame rate and bitrate setting will provide you the better video quality, but it will also require more internet bandwidth and use more storage space on the hard disk drive.

7.3.2 Sub-Stream

The sub-stream is a second codec that runs alongside the mainstream. It allows you to reduce the outgoing internet bandwidth without sacrificing your direct recording quality.

The sub-stream is often exclusively used by smartphone applications to view live video. Users with limited internet speeds may benefit most from this setting.

7.3.3 Picture

The picture refers to the live picture capture in continuous or event recording type.

**Picture Quality**: set the picture quality to low, medium or high. The higher picture quality results in more storage space requirement.

**Interval**: the interval of capturing live picture.

7.3.4 ANR

ANR (Automatic Network Replenishment) function which enables the IP camera to save the recording files in the local storage when the network is disconnected, and when the network is resumed, it uploads the files to the device.

Enable the ANR (Automatic Network Replenishment) function via the web browser (Configuration > Storage > Schedule Settings > Advanced).

7.3.5 Configure Advanced Recording Settings

Step 1 Go to **Storage > Schedule Settings > Record Schedule/Capture Schedule**.

Step 2 Check the checkbox of **Enable** to enable scheduled recording.

Step 3 Click **Advanced** to set the recording parameters.
**Record Audio**: Check the checkbox to enable or disable audio recording.

**Pre-record**: The time you set to record before the scheduled time or event. For example, when an alarm triggers the recording at 10:00, and if you set the pre-record time as 5 seconds, the camera records at 9:59:55.

**Post-record**: The time you set to record after the event or the scheduled time. For example, when an alarm triggered recording ends at 11:00, and if you set the post-record time as 5 seconds, it records till 11:00:05.

**Expired Time**: The expired time is period for a recorded file to be kept in the HDD. When the deadline is reached, the file will be deleted. If you set the expired time to 0, the file will not be deleted. The actual keeping time for the file should be determined by the capacity of the HDD.

**Redundant Record/Capture**: By enabling redundant record or capture you save the record and captured picture in the redundant HDD. See *Chapter Configure Redundant Recording and Capture*.

**Stream Type**: Main stream and sub-stream are selectable for recording. When you select sub-stream, you can record for a longer time with the same storage space.

Step 4 Click **OK** to save the settings.

### 7.4 Configure Recording Schedule

Set the record schedule, and then the camera automatically starts/stops recording according to the configured schedule.

**Before you start**

Make sure you have installed the HDDs to the device or added the network disks before you want to store the video files, pictures and log files.

Refer to the *Quick Start Guide* for the HDD installation.
Refer to Chapter 7.1.2 Add the Network Disk for network HDD connections.

Step 1 Go to Storage > Recording Schedule.

Figure 7-10 Recording Schedule

Step 2 Select a camera.

Step 3 Check Enable Schedule.

Step 4 Select a record type. The record type can be Continuous, Motion Detection, Alarm, Motion | Alarm, Motion & Alarm, and Event.

Different recording types are configurable.

- **Continuous**: scheduled recording.
- **Event**: recording triggered by all event triggered alarm.
- **Motion**: recording triggered by motion detection.
- **Alarm**: recording triggered by alarm.
- **M/A**: recording triggered by either motion detection or alarm.
- **M&A**: recording triggered by motion detection and alarm.

Step 5 Select a day and click-and-drag the mouse on the time bar to set the record schedule.

Step 6 Repeat the above steps to schedule recording or capture for other days in the week.
The all-day continuous recording is configured for the device by factory default.

Step 7 Click **Apply** to save the settings.

To enable Motion, Alarm, M | A (motion or alarm), M & A (motion and alarm) and Event triggered recording and capture, you must configure the motion detection settings, alarm input settings and other events as well. Please refer to Chapter 10 and Chapter 12 for details.

### 7.5 Configure Continuous Recording

Step 1 Go to **Camera > Encoding Parameters > Recording Parameters**.

Step 2 Set the continuous main stream/sub-stream recording parameters for the camera.

Step 3 Go to **Storage > Recording Schedule**.

Step 4 Select the recording type to **Continuous**.

Step 5 Drag the mouse on the time bar to set the continuous recording schedule. Refer to Chapter 7.4 Configure Recording Schedule for details.

### 7.6 Configure Motion Detection Triggered Recording

You can configure the recording triggered by the motion detection event.

Step 1 Go to **System > Event > Normal Event > Motion Detection**.

Step 2 Configure the motion detection and select the channel (s) to trigger the recording when motion event occurs. Refer to Chapter 11.3 Configure Motion Detection Alarm for details.

Step 3 Go to **Camera > Encoding Parameters > Recording Parameters**.

Step 4 Set the event main stream/sub-stream recording parameters for the camera.

Step 5 Go to **Storage > Recording Schedule**.

Step 6 Select the recording type to **Motion**.

Step 7 Drag the mouse on the time bar to set the motion detection recording schedule. Refer to Chapter 7.4 Configure Recording Schedule for details.

### 7.7 Configure Event Triggered Recording

You can configure the recording triggered by the motion detection, motion detection and alarm, face detection, vehicle detection, line crossing detection, etc.
Step 1 Go to System > Event.

Step 2 Configure the event detection and select the channel(s) to trigger the recording when event occurs. Refer to Chapter 10 and Chapter 12 for details.

Step 3 Go to Camera > Encoding Parameters > Recording Parameters.

Step 4 Set the event main stream/sub-stream recording parameters for the camera.

Step 5 Go to Storage > Recording Schedule.

Step 6 Select the recording type to Event.

Step 7 Drag the mouse on the time bar to set the event detection recording schedule. Refer to Chapter 7.4 Configure Recording Schedule for details.

### 7.8 Configure Alarm Triggered Recording

You can configure the recording triggered by the motion detection, face detection, vehicle detection, line crossing detection, etc.

Step 1 Go to System > Event > Normal Event > Alarm Input.

Step 2 Configure the alarm input and select the channel(s) to trigger the recording when alarm occurs. Refer to Chapter 10 and Chapter 12 for details.

Step 3 Go to Camera > Encoding Parameters > Recording Parameters.

Step 4 Set the event main stream/sub-stream recording parameters for the camera.

Step 5 Go to Storage > Recording Schedule.

Step 6 Select the recording type to Alarm.

Step 7 Drag the mouse on the time bar to set the alarm recording schedule. Refer to Chapter 7.4 Configure Recording Schedule for details.

### 7.9 Configure Picture Capture

The picture refers to the live picture capture in continuous or event recording type.

Step 1 Go to Camera > Encoding Parameters > Capture.

Step 2 Set the picture parameters.

- **Resolution**: set the resolution of the picture to capture.
- **Picture Quality**: set the picture quality to low, medium or high. The higher picture quality results in more storage space requirement.
- **Interval**: the interval of capturing live picture.

Step 3 Go to Storage > Capture Schedule.
Step 4 Select the camera to configure the picture capture.

```
<table>
<thead>
<tr>
<th>Camera No.</th>
<th>[D1] IPCamera 01</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enable Schedule</td>
<td>✗</td>
</tr>
</tbody>
</table>
```

![Figure 7-11 Set Picture Capture Schedule](image)

Step 5 Set the picture capture schedule. Refer to Chapter 7.4 Configure Recording Schedule for details.

### 7.10 Configure Holiday Recording and Capture

**Purpose:**

Follow the steps to configure the record or capture schedule on holiday for that year. You may want to have different plan for recording and capture on holiday.

Step 1 Go to **System > Holiday Settings**.

Step 2 Select a holiday item from the list and click [ ].

Step 3 Check the **Enable** to configure the holiday.
1) Edit the holiday name.
2) Select the mode to by date, by week or by month.
3) Set the start and end date of the holiday.
4) Click OK.

Step 4 Set the schedule for the holiday recording. Refer to Chapter 7.4 Configure Recording Schedule for details.
7.11 Configure Redundant Recording and Capture

*Purpose:*

Enabling redundant recording and capture, which means saving the record files and captured pictures not only in the R/W HDD but also in the redundant HDD, will effectively enhance the data safety and reliability.

**NOTE**

You must set the storage mode to *Group* before you set the HDD property to *Redundancy*. For detailed information, please refer to Chapter 7.2.1 Configure HDD Group. There should be at least another HDD which is in Read/Write status.

**Step 1** Go to *Storage > Storage Device*.

**Step 2** Select a **HDD** from the list and Click to enter the Local HDD Settings interface.

**Step 3** Set the HDD property to **Redundancy**.

![Figure 7-13 HDD Property-Redundancy](image)

**Step 4** Go to *Storage > Schedule Settings > Record Schedule/Capture Schedule*.

**Step 5** Click **Advanced** to set the camera recording parameters.
Step 6 Check the checkbox of **Redundant Record/Capture**.

Step 7 Click **OK** to save settings.
Chapter 8 Disk Array

Purpose:
Disk array is a data storage virtualization technology that combines multiple physical disk drive components into a single logical unit. An array stores data over multiple HDDs to provide enough redundancy so that data can be recovered if one disk fails. Data is distributed across the drives in one of several ways called "RAID levels", depending on what level of redundancy and performance is required.

8.1 Create Disk Array

Purpose:
The device supports the disk array that is realized by software. You can enable the RAID function as required. Two ways are available for creating array: one-touch configuration and manual configuration. The following flow chart shows the process of creating array.

8.1.1 Enable RAID

Purpose:
Perform the following steps to enable the disk array function.

Step 1 Go to Storage > Advanced.

Step 2 Check Enable RAID.

Step 3 Click Apply.

Step 4 Reboot device to take effect the settings.
8.1.2 One-Touch Creation

**Purpose:**

One-touch configuration helps you to quickly create the disk array. By default, the array type created by one-touch configuration is RAID 5.

**Before you start:**

- Enable RAID function. For details, refer to Chapter 8.1.1 Enable RAID.
- Install at least 3 HDDs. If more than 10 HDDs are installed, 2 arrays will be created. To maintain reliable and stable running of the HDDs, it is recommended to use enterprise-level HDDs with the same model and capacity.

**Step 1** Go to **Storage > RAID Setup > Physical Disk**.

**Step 2** Click **One-touch Config**.

**Step 3** Edit the array name in **Array Name** text filed and click **OK** to start configuring.

![NOTE](image)

If you install 4 HDDs or more, a hot spare disk for array rebuilding will be created.

**Step 4** A message box will pop up when the array creation is completed, click **OK** on it.

**Step 5** Optionally, the device will automatically initialize the created array. Go to **Storage > RAID Setup > Array** view the information of created array.

8.1.3 Manual Creation

**Purpose:**

Manually create the array of RAID 0, RAID 1, RAID 5, RAID 6, and RAID 10.

**Step 1** Go to **Storage > RAID Setup > Physical Disk**.

**Step 2** Click **Create**.
Step 3 Enter the array name.

Step 4 Select **RAID Level** as **RAID 0, RAID 1, RAID 5, RAID 6, or RAID 10** as required.

Step 5 Select the physical disks to constitute array.

**Table 8-2 Required Number of HDD**

<table>
<thead>
<tr>
<th>RAID Level</th>
<th>Required Number of HDD</th>
</tr>
</thead>
<tbody>
<tr>
<td>RAID 0</td>
<td>At least 2 HDDs.</td>
</tr>
<tr>
<td>RAID 1</td>
<td>At least 2 HDDs.</td>
</tr>
<tr>
<td>RAID 5</td>
<td>At least 3 HDDs.</td>
</tr>
<tr>
<td>RAID 6</td>
<td>At least 4 HDDs.</td>
</tr>
<tr>
<td>RAID 10</td>
<td>The number of HDD must be an even ranges from 4 to 16.</td>
</tr>
</tbody>
</table>

Step 6 Click **OK**.

Step 7 Optionally, the device will automatically initialize the created array. Go to **Storage > RAID Setup > Array** view the information of created array.

**Figure 8-3 Array List**
8.2 Rebuild Array

Purpose:
The status of array includes Functional, Degraded and Offline. To ensure the high security and reliability of the data stored in array, you should take immediate and proper maintenance at arrays according their status.

- Functional: No disk loss in the array.
- Offline: The number of lost disks has exceeded the limit.
- Degraded: If amount of HDD fail in array, array degrades. You should recover it to Functional by array rebuilding.

8.2.1 Configure Hot Spare Disk

Purpose:
Hot spare disks are required for disk array automatic rebuilding.

Step 1 Go to Storage > RAID Setup > Physical Disk.

Step 2 Click of an available HDD to set it as the hot spare disk.

8.2.2 Automatically Rebuild Array

Purpose:
The device can automatically rebuild degraded arrays with the hot spare disks.

Before you start:
Create hot spare disks. For details, refer to Chapter 8.2.1 Configure Hot Spare Disk.

Step 1 The device will automatically rebuild the degraded arrays with the hot spare disks. Go to Storage > RAID Setup > Array to view rebuilding progress.
8.2.3 Manually Rebuild Array

**Purpose:**
If no hot spare disks are configured, rebuild the degraded array manually.

**Before you start:**
At least one available physical disk should exist for rebuilding the array.

Step 1 Go to **Storage > RAID Setup > Array**.

![Array List](image)

**Figure 8-6 Array List**

Step 2 Click **✔** of degraded array.

![Rebuild Array](image)

**Figure 8-7 Rebuild Array**

Step 3 Select the available physical disk.

Step 4 Click **OK**.

Step 5 Click **OK** on the pop up message box “Do not unplug the physical disk when it is under rebuilding”.

81
8.3 Delete Array

![NOTE]
Deleting array will delete all the data saved in it.

Step 1 Go to **Storage > RAID Setup > Array**.

![Figure 8-8 Array List]

Step 2 Click ✗ of array to delete.

![Figure 8-9 Attention]

Step 3 Click **Yes** on the popup message box.
8.4 Check and Edit Firmware

*Purpose:*
You can view the information of the firmware and set the background task speed on the Firmware interface.

**Step 1** Go to **Storage > RAID Setup > Firmware**.

<table>
<thead>
<tr>
<th>Version</th>
<th>1.1.0.0003</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physical Disk Count</td>
<td>16</td>
</tr>
<tr>
<td>Array Count</td>
<td>16</td>
</tr>
<tr>
<td>Virtual Disk Count</td>
<td>0</td>
</tr>
<tr>
<td>RAID Level</td>
<td>0 1 5 6 10</td>
</tr>
<tr>
<td>Hot Spare Type</td>
<td>Global Hot Spare</td>
</tr>
<tr>
<td>Support Rebuild</td>
<td>Yes</td>
</tr>
<tr>
<td>Background Task Speed</td>
<td>Medium Speed</td>
</tr>
</tbody>
</table>

**Figure 8-10 Firmware**

**Step 2** Optionally, set the **Background Task Speed**.

**Step 3** Click **Apply**.
Chapter 9 File Management

9.1 Search and Export All Files

9.1.1 Search Files

Purpose
Specify detailed conditions to search videos and pictures.

Step 1 Go to File Management > All Files.

Step 2 Specify detailed conditions, including time, camera, event type, etc.

Step 3 Click Search to display results. The matched files will be displayed.

9.1.2 Export Files

Purpose
Export files for backup purposes using USB device (USB flash drive, USB HDD, USB optical disc drive), SATA optical disc drive or eSATA HDD.

Step 1 Search files to export. For details, see 9.1.1 Search Files.

Step 2 Click to select files and click Export.

Step 3 Select the file to export as Video and Log and click OK.

Step 4 Click OK to export files to backup device.
9.2 Search and Export Human Files

9.2.1 Search Human Files

**Purpose**

Specify detailed conditions to search human pictures and videos.

**Before you start**

Configure human body detection function for the cameras you want to search and export human pictures and videos.

Step 1 Go to **File Management > Human Files**.

Step 2 Select **Time** and **Camera** to search.

![Figure 9-2 Search Human Files](image)

Step 3 Click **Search** to display results. The matched files are displayed in thumbnail or list.

Step 4 Select **Target Picture** or **Source Picture** in menu bar to display related pictures only.

- **Target Picture**: Display the search results of people close-up.
- **Source Picture**: Display the search results of original picture captured by camera.

9.2.2 Export Human Files

**Purpose**

Export files for backup purposes using USB device (USB flash drive, USB HDD, USB optical disc drive), SATA optical disc drive or eSATA HDD.

Step 1 Search for the human files to export. For details, see **9.2.1 Search Human Files**.

Step 2 Click to select files and click **Export**.

Step 3 Select the file to export as **Video and Log** and click **OK**.

Step 4 Click **OK** to export files to backup device.
9.3 Search and Export Vehicle Files

9.3.1 Search Vehicle Files

**Purpose**

Specify detailed conditions to search vehicle pictures and videos.

**Before you start**

Configure vehicle detection function for the cameras you want to search and export vehicle pictures and videos.

Step 1 Go to **File Management > Vehicle Files**.

Step 2 Specify detailed conditions, including **Time**, **Camera**, **Plate No.**, and **Area/Country**.

![Figure 9-3 Search Vehicle Files](image)

Step 3 Click **Search** to display results. The matched files are displayed in thumbnail or list.

Step 4 Select **Target Picture** or **Source Picture** in menu bar to display related pictures only. Select **Video** or **Picture** to specify the file type.

- **Target Picture**: Display the search results of vehicle close-up.
- **Source Picture**: Display the search results of original picture captured by camera.

9.3.2 Export Vehicle Files

**Purpose**

Export files for backup purposes using USB device (USB flash drive, USB HDD, USB optical disc drive), SATA optical disc drive or eSATA HDD.

Step 1 Search for the vehicle files to export. For details, see 9.3.1 Search Vehicle Files.

Step 2 Click to select files and click **Export**.

Step 3 Select the file to export as **Video and Log** and click **OK**.

Step 4 Click **OK** to export files to backup device.
9.4 Search History Operation

9.4.1 Save Search Condition

*Purpose*

You can save the search conditions for future reference and quick search.

Step 1 Go to **File Management > All Files/People Appearance File/Vehicle File**.

Step 2 Set the search conditions.

Step 3 Click **Save**.

Step 4 Enter a name in text field and click **Finished**. The saved search conditions will be displayed in search history list.

9.4.2 Call Search History

*Purpose:*

You can quickly search files by calling search history.

Step 1 Go to **File Management > All Files/Human Files/Vehicle Files**.

Step 2 Click a search condition to quickly search files.
Chapter 10 Playback

10.1 Play Video Files

10.1.1 Instant Playback

Instant Playback enables the device to play the recorded video files in last five minutes. If no video is found, it means there is no recording during the last five minutes.

Step 1 On the live view window of the selected camera, move the cursor to the window bottom to access the toolbar.

Step 2 Click to start instant playback.

10.1.2 Play Normal Video

Step 1 Go to Playback.

Step 2 Check one or more cameras in the camera list to start playing the video.

Step 3 Select a date in the calendar.

- Use the toolbar in the bottom part of playback interface to control the playing and realize a series of operations. Refer to Chapter 10.2 Playback Operations 8.2.
Click the channel(s) to execute simultaneous playback of multiple channels.

**NOTE**

The playing speed of 256X is supported.

### 10.1.3 Play Smart Searched Video

In the smart playback mode, the device can analyze the video containing the motion, line or intrusion detection information, mark it in red color and play the smart searched video.

**NOTE**

The smart playback must be in the single-channel playing mode.

**Step 1** Go to **Playback**.

**Step 2** Start playing the video of camera.

**Step 3** Click **Smart**.

**Step 4** From the toolbar at the bottom of the playing window, click the motion/line crossing/ intrusion icon for search.
Step 5 Set the rules and areas for smart search of line crossing detection, intrusion detection or motion detection event triggered recording.

- **Line Crossing Detection**
  5) Click the icon.
  6) Click on the image to specify the start point and end point of the line.

- **Intrusion Detection**
  7) Click the icon.
  8) Specify 4 points to set a quadrilateral region for intrusion detection. Only one region can be set.

- **Motion Detection**
  9) Click the icon.
  10) Hold the mouse on the image to draw the detection area manually.
  11) Click Search to search the matched video and start to play it.

### 10.1.4 Play Custom Searched Files

You can play the files by custom search with different conditions.

**Step 1** Go to **Playback**.

**Step 2** Select a camera or cameras from the list.

**Step 3** Click **Custom Search** on the left bottom to enter the Search Condition interface.

**Step 4** Enter the search conditions for the files, e.g., time, file status, event type, etc.
**10.1.5 Video Synopsis**

**Purpose:**

Video synopsis is an approach to create a short video summary of a long video. It tracks and analyzes moving objects (also called events), and converts video streams into a database of objects and activities.

**Before you start:**

Enable Dual-VCA and intrusion detection/line crossing detection on the network camera.

Step 1 Go to **Playback** interface.
Step 2 Click in toolbar.

Step 3 Select a camera in channel list.

Step 4 Specify Start Time and End Time. The duration must be within 24 hours.

Step 5 Click Search to start play.

Step 6 Optionally, double click a target on the playback window. A 60-second video of 30 seconds before and after the time will be played.

10.1.6 Play Tag Files

Purpose:
Video tag allows you to record related information like people and location of a certain time point during playback. You can use video tag(s) to search for video files and position time point.

Before playing back by tag:

Add Tag Files
Step 1 Go to Playback.
Step 2 Search and play back the video file(s).
Step 3 Click to add the tag.
Step 4 Edit the tag information.
Step 5 Click OK.
Max. 64 tags can be added to a single video file.

Edit Tag Files

Step 1 Go to Playback.

Step 2 Click Tag.

The available tags are white marked and displayed in the time bar.

Step 3 Point the white marked tag in the time bar to access the tag information.

Step 4 Click to edit the tag name.

Step 5 Click OK.

Play Tag Files

Step 1 Go to Playback.

Step 2 Click Custom Search on the left bottom to enter the Search Condition interface.

Step 3 Enter the search conditions for the tag files, including the time and the tag keyword.
Step 4 Click **Search**.

Step 5 On the search results interface, select a tag file and click to start playing the video.

### 10.1.7 Play Event Files

**Purpose**

Play back video files on one or several channels searched by event type (e.g., alarm input, motion detection, line crossing detection, face detection, vehicle detection, etc.).

Step 1 Go to **Playback**.

Step 2 Click **Custom Search** on the left bottom to enter the Search Condition interface.

Step 3 Enter the search conditions for the event files, e.g., time, event type, file status, vehicle information (for vehicle detection event), etc.

Step 4 Click **Search**.
Step 5 On the search results interface, select an event video file/picture file and double click to start playing the video.

![Figure 10-11 Event Files]

Step 6 You can click ⏪ or ⏯ button to play 30s backward or forward.

![NOTE]

- Refer to Chapter 11 Chapter 10 and Chapter 12 for details for event and alarm settings.
- Refer to Chapter 7.7 Configure Event Triggered Recording for the event triggered recording/capture settings.

10.1.8 Play by Sub-periods

**Purpose:**

The video files can be played in multiple sub-periods simultaneously on the screens.

Step 1 Go to **Playback**.

Step 2 Select icon at the left bottom corner to enter the sub-period playing mode.

Step 3 Select a camera.

Step 4 Set the start time and end time for searching video.

Step 5 Select the different multi-period at the right bottom corner, e.g., 4-Period.
According to the defined number of split-screens, the video files on the selected date can be divided into average segments for playback. E.g., if there are video files existing between 16:00 and 22:00, and the 6-screen display mode is selected, then it can play the video files for 1 hour on each screen simultaneously.

10.1.9 Play Log Files

*Purpose:*

Play back record file(s) associated with channels after searching system logs.

*Step 1* Go to **Maintenance > Log Information**.

*Step 2* Click **Log Search** tab to enter Playback by System Logs.

*Step 3* Set search time and type and click **Search**.

![Figure 10-12 System Log Search Interface](image)

*Step 4* Choose a log with video file and click 🎞 to start playing the log file.

10.1.10 Play External File

*Purpose:*

You can play files from the external storage devices.

*Before You Start:*

Connect the storage device with the video files to your device.
Step 1 Go to **Playback**.

Step 2 Click the  icon at the left bottom corner.

Step 3 Select and click the  button or double click to play the file.

## 10.2 Playback Operations

### 10.2.1 Set Play Strategy in Smart/Custom Mode

**Purpose:**

When you are in the smart or custom video playback mode, you can set the playing speed separately for the normal video and the smart/custom video, or you can select to skip the normal video.

In the Smart/Custom video playback mode, click  to set the play strategy.

- **When Do not Play Normal Videos** is checked, the device will skip the normal video and play the smart (motion/line crossing/intrusion) video and the custom (searched video) only in the normal speed (X1).

- **When Do not Play Normal Videos** is unchecked, you can set the play speed for the normal video the smart/custom video separately. The speed range is from X1 to XMAX.

**NOTE**

You can set the speed in the single-channel play mode only.

![Figure 10-13 Play Strategy](image)

### 10.2.2 Edit Video Clips

You can take video clips during the playback and export the clips.

In the video playback mode, click  to start video clipping operation.
- Set the start time and end time of the video clipping.

- Export the video clips to the local storage device.

10.2.3 Switch between Main Stream and Sub-Stream

You can switch between the main stream and the sub-stream during the playback.

- Play the video in main stream.
- Play the video in sub-stream.

**NOTE**

The encoding parameters for the main stream and sub-stream can be configured in **Storage > Encoding Parameters**.

10.2.4 Thumbnails View

With the thumbnails view on the playback interface, you can conveniently locate the required video files on the time bar.

In the video playback mode, move the mouse to the time bar to get the preview thumbnails of the video files.

![](image)

Figure 10-14 Thumbnails View

You can select and click on a required thumbnail to enter the full-screen playback.

10.2.5 Fisheye View

You can enter the fisheye expansion view during the video playback.

Click the to enter the fisheye expansion mode.

- **180° Panorama**: Switch the live view image to the 180° panorama view.
- **360° Panorama (360°):** Switch the live view image to the 360° panorama view.

- **PTZ Expansion (PTZ):** The PTZ Expansion is the close-up view of some defined area in the fisheye view or panorama expansion, and it supports the electronic PTZ function, which is also called e-PTZ.

- **Radial Expansion (雷达):** In the radial expansion mode, the whole wide-angle view of the fisheye camera is displayed. This view mode is called Fisheye View because it approximates the vision of a fish’s convex eye. The lens produces curvilinear images of a large area, while distorting the perspective and angles of objects in the image.

### 10.2.6 Fast View

You can hold the mouse to drag on the time bar to get the fast view of the video files.

In the video playback mode, use the mouse to hold and drag through the playing time bar to fast view the video files.

Release the mouse to the required time point to enter the full-screen playback.

### 10.2.7 Digital Zoom

In the video playback mode, click [+] from the toolbar to enter the digital zoom interface.

You can move the sliding bar or scroll the mouse wheel to zoom in/out the image to different proportions (1 to 16X).

![Figure 10-15 Digital Zoom](image-url)
Chapter 11 Event and Alarm Settings

11.1 Configure Arming Schedule

Step 1 Select the Arming Schedule tab.

Step 2 Choose one day of a week and set the time segment. Up to eight time periods can be set within each day.

![NOTE]

Time periods shall not be repeated or overlapped.

![Figure 11-1 Set Arming Schedule]

Step 3 Click Apply to save the settings.

11.2 Configure Alarm Linkage Actions

Step 1 Click Linkage Action to set the alarm linkage actions.
Step 2 Select the normal linkage actions, trigger alarm output or trigger recording channel.

- **Full Screen Monitoring**

  When an alarm is triggered, the local monitor displays in full screen the video image from the alarming channel configured for full screen monitoring.

  If alarms are triggered simultaneously in several channels, their full-screen images will be switched at an interval of 10 seconds (default dwell time). A different dwell time can be set by going to **System>Live View > Full Screen Monitoring Dwell Time**.

  Auto-switch will terminate once the alarm stops and back to the live view interface.

**NOTE**

You must select the channel(s) in **Trigger Channel** settings you want to trigger full screen monitoring.

- **Audible Warning**

  It will trigger an audible *beep* when an alarm is detected.

- **Notify Surveillance Center**
It will send an exception or alarm signal to the remote alarm host when an event occurs. The alarm host refers to the PC installed with Remote Client.

**NOTE**

The alarm signal will be transmitted automatically at detection mode when remote alarm host is configured. Please refer to Chapter 14.8 Configure Ports for alarm host configuration.

- **Send Email**

  It will send an email with alarm information to the user when an alarm is detected.

  Please refer to 14.7 Configure Email for details of Email configuration.

  **Step 3** Check the checkbox to select the alarm output when an alarm is triggered.

  **NOTE**

  To trigger an alarm output when an event occurs, please refer to Chapter 11.6.3 Configure Alarm Output to set the alarm output parameters.

  **Step 4** Click **Trigger Channel** and select one or more channels which will start to record/capture or perform full-screen monitoring when motion alarm is triggered.

  **NOTE**

  You have to set the recording schedule to realize this function. Please refer to Refer to Chapter 7.4 Configure Recording Schedule for settings of the recording schedule.

  **Step 5** Click **Apply** to save the settings.

**11.3 Configure Motion Detection Alarm**

The motion detection enables the device to detect the moving objects in the monitoring area and trigger the alarm.

**Step 1** Go to **System > Event > Normal Event > Motion Detection**.
Step 2 Select the camera to configure the motion detection.

Step 3 Check Enable.

Step 4 Set the motion detection area.

- Full screen: click to set the full-screen motion detection for the image.
- Customized area: use the mouse to click and drag on the preview screen to draw the customized motion detection area(s).

You can click Clear to clear the current motion detection area settings and draw again.

Step 5 Set sensitivity (0-100). The sensitivity allows you to calibrate how readily movement triggers the alarm. The higher value results in the more readily to trigger the motion detection.

Step 6 Set the arming schedule. Refer to Chapter 11.1 Configure Arming Schedule.

Step 7 Set the linkage actions. Refer to Chapter 11.2 Configure Alarm Linkage Actions.
11.4 Configure Video Loss Alarm

**Purpose:**

The video loss detection enables to detect video loss of a channel and take alarm response action(s).

**Step 1** Go to System > Event > Normal Event > Video Loss

![Figure 11-4 Set Video Loss Detection](image)

**Step 2** Select the camera to configure the video loss detection.

**Step 3** Check Enable.

**Step 4** Set the arming schedule. Refer to Chapter 11.1 Configure Arming Schedule.

**Step 5** Set the linkage actions. Refer to Chapter 11.2 Configure Alarm Linkage Actions.
11.5 Configure Video Tampering Alarm

*Purpose:*

The video tampering detection enables to trigger alarm when the camera lens is covered and take alarm response action(s).

**Step 1** Go to **System > Event > Normal Event > Video Tampering**.

**Step 2** Select the camera to configure the video tampering detection.

**Step 3** Check **Enable**.

**Step 4** Set the video tampering area. Use the mouse to click and drag on the preview screen to draw the customized video tampering area.

You can click **Clear** to clear the current area settings and draw again.

**Step 5** Set sensitivity level (0-2). 3 levels are available. The sensitivity allows you to calibrate how readily movement triggers the alarm. The higher value results in the more readily to trigger the video tampering detection.

**Step 6** Set the arming schedule. Refer to Chapter 11.1 Configure Arming Schedule.

**Step 7** Set the linkage actions. Refer to Chapter 11.2 Configure Alarm Linkage Actions.
11.6 Configure Sensor Alarms

**Purpose:**
Set the handling action of an external sensor alarm.

11.6.1 Configure Alarm Input

Step 1 Go to **System > Event > Normal Event > Alarm Input**

Step 2 Select an alarm input item from the list and click 

![Alarm Input](image)

**Step 3** Select the alarm input type to N.C or N.O.

**Step 4** Edit the alarm name.

**Step 5** Check the radio button of **Input**.

**Step 6** Set the arming schedule. Refer to Chapter 11.1 Configure Arming Schedule.

**Step 7** Set the linkage actions. Refer to Chapter 11.2 Configure Alarm Linkage Actions.

**Step 8** Click **Apply** and follow the message box to reboot device to take effect the settings.
11.6.2 Configure One-Key Disarming

The one-key disarming enables the device to disarm the alarm input 1 by one-key operation.

Step 1 Go to System> Event>Normal Event>Alarm Input

Step 2 Select the alarm input 1 item from the list and click .

Step 3 Select the alarm input type to N.C or N.O.

Step 4 Edit the alarm name.

Step 5 Check the radio button of Enable One-Key Disarming.

![Figure 11-7 One-Key Alarm Disarming](image)

Step 6 Select the alarm linkage action (s) you want to disarm for the local alarm input 1.

**NOTE**

When the alarm input 1 (Local<1) is enabled with one-key disarming, the other alarm input settings are not configurable.

Step 7 Click **Apply** to save the settings.

11.6.3 Configure Alarm Output

Trigger an alarm output when an alarm is triggered.
Step 1 Go to **System** > **Event** > **Normal Event** > **Alarm Output**.

Step 2 Select an alarm output item from the list and click.

Step 3 Edit the alarm name.

Step 4 Select the dwell time (the alarm duration) from 5s to 600s, or **Manually Clear**.

**Manually Clear**: you should manually clear the alarm when the alarm occurs. Refer to Chapter 11.9 Trigger or Clear Alarm Output Manually for detailed instructions.

Step 5 Set the arming schedule. Refer to Chapter 11.1 Configure Arming Schedule.

![Figure 11-8 Alarm Output](image)

Step 1 (Optional) You can click **Copy** to copy the same settings to other alarm output(s).
11.7 Configure Exceptions Alarm

The exception events can be configured to take the event hint in the live view window, trigger alarm output and linkage actions.

Step 1 Go to System > Event > Normal Event > Exception.

Step 2 (Optional) Enable the event hint if you want to display the event hint in the live view window.

1) Check the checkbox of Enable Event Hint.

2) Click to select the exception type(s) to take the event hint.

![Event Hint Settings](image)

Figure 11-9 Event Hint Settings

Step 3 Select the exception type from the drop-down list to set the linkage actions.
Step 4 Set the normal linkage and alarm output triggering. Refer to Chapter 11.2 Configure Alarm Linkage Actions.
11.8 Alarm Linkage Actions

**Purpose:**

Alarm linkage actions will be activated when an alarm or exception occurs, including Event Hint Display, Full Screen Monitoring, Audible Warning (buzzer), Notify Surveillance Center, Trigger Alarm Output and Send Email.

### 11.8.1 Configure Auto-switch Full Screen Monitoring

When an alarm is triggered, the local monitor displays in full screen the video image from the alarming channel configured for full screen monitoring. And when the alarm is triggered simultaneously in several channels, you must configure the auto-switch dwell time.

**Step 1** Go to **System > View > General**.

**Step 2** Set the event output and dwell time.

- **Event Output**: Select the output to show event video.
- **Full Screen Monitoring Dwell Time**: Set the time in seconds to show alarm event screen. If alarms are triggered simultaneously in several channels, their full-screen images will be switched at an interval of 10 seconds (default dwell time).

**Step 3** Go to the **Linkage Action** interface of the alarm detection (e.g., motion detection, video tampering, face detection, etc.).

**Step 4** Select the **Full Screen Monitoring** alarm linkage action.

**Step 5** Select the channel(s) in **Trigger Channel** settings you want to make full screen monitoring.

**NOTE**

Auto-switch will terminate once the alarm stops and back to the live view interface.

### 11.8.2 Configure Audio Warning

The audio warning enables the system to trigger an audible *beep* when an alarm is detected.

**Step 1** Go to **System>View>General**.

**Step 2** Enable the audio output and set the volume.

**Step 3** Go to the **Linkage Action** interface of the alarm detection (e.g., motion detection, video tampering, face detection, etc.).

**Step 4** Select the **Audio Warning** alarm linkage action.

### 11.8.3 Notify Surveillance Center

The device can send an exception or alarm signal to the remote alarm host when an event occurs. The alarm host refers to the PC installed with client software (e.g., iVMS-4200, iVMS-5200).
Step 1 Go to System > Network > Advanced > More Settings.

Step 2 Set the alarm host IP and alarm host port.

Step 3 Go to the Linkage Action interface of the alarm detection (e.g., motion detection, video tampering, face detection, etc.).

Step 4 Select the Notify Surveillance Center.

11.8.4 Configure Email Linkage

The system can send an email with alarm information to a user or users when an alarm is detected.

Please refer to Chapter 14.7 Configure Email for details of Email configuration.

Step 1 Go to System>Network>Advanced.

Step 2 Configure the Email settings.

Step 3 Go to the Linkage Action interface of the alarm detection (e.g., motion detection, video tampering, face detection, etc.).

Step 4 Select the Send Email alarm linkage action.

11.8.5 Trigger Alarm Output

The alarm output can be triggered by the alarm input, motion detection, video tampering detection, face detection, line crossing detection, and all other events.

Step 1 Go to the Linkage Action interface of the alarm input or event detection (e.g., motion detection, face detection, line crossing detection, intrusion detection, etc.).

Step 2 Click the Trigger Alarm Output tab.

Step 3 Select the alarm output (s) to trigger.

Step 4 Go to System> Event>Normal Event>Alarm Output.

Step 5 Select an alarm output item from the list.

Refer to Chapter 11.6.3 Configure Alarm Output for the alarm output settings.

11.8.6 Configure PTZ Linkage

The system can trigger the PTZ actions (e.g., call preset/patrol/pattern) when the alarm event, or VCA detection events occur.

Make sure the PTZ or speed dome connected supports PTZ linkage.
Step 1 Go to the **Linkage Action** interface of the alarm input or VCA detection (e.g., face detection, line crossing detection, intrusion detection, etc.).

Step 2 Select the **PTZ Linkage**.

Step 3 Select the camera to perform the PTZ actions.

Step 4 Select the preset/patrol/pattern No. to call when the alarm events occur.

![Figure 11-11 PTZ Linkage](image)

### NOTE

You can set one PTZ type only for the linkage action each time.

11.9 Trigger or Clear Alarm Output Manually

**Purpose:**

Sensor alarm can be triggered or cleared manually. When the **Manually Clear** is selected for the dwell time of an alarm output, the alarm can be cleared only by clicking **Clear** button.

Step 1 Go to **System** > **Event** > **Normal Event** > **Alarm Output**.

Step 2 Select the alarm output you want to trigger or clear.

Step 3 Click **Trigger/Clear** to trigger or clear an alarm output.

Chapter 12 VCA Event Alarm

The device supports receiving the VCA detections sent by connected IP cameras. Enable and configure the VCA detection on the IP camera settings interface first.

![NOTE]

- VCA detections must be supported by the connected IP camera.
- Refer to the User Manual of Network Camera for the detailed instructions for the VCA detection.

12.1 Face Detection

**Purpose:**

Face detection function detects the face appears in the surveillance scene. Linkage actions will be triggered when a human face is detected.

Step 1 Go to System > Event > Smart Event.

Step 2 Click **Face Detection**.

![Figure 12-1 Face Detection](image-url)

Step 3 Select a **Camera** to configure.
Step 4 Check **Enable Face Detection**.

Step 5 Optionally, check **Save VCA Picture** to save the captured pictures of face detection.

Step 6 Drag the **Sensitivity** slider to set the detection sensitivity. Sensitivity range: [1-5]. The higher the value is, the more easily the face can be detected.

Step 7 Set the arming schedule. Refer to Chapter 11.1 Configure Arming Schedule.

Step 8 Set the linkage actions. Refer to Chapter 11.2 Configure Alarm Linkage Actions.

Step 9 Click **Apply**.

### 12.2 Vehicle Detection

**Purpose:**

Vehicle Detection is available for the road traffic monitoring. In Vehicle Detection, the passed vehicle can be detected and the picture of its license plate can be captured. You can send alarm signal to notify the surveillance center and upload the captured picture to FTP server.

Step 1 Go to **System > Event > Smart Event**.

Step 2 Click **Vehicle**.

Step 3 Select a **Camera** to configure.

Step 4 Check **Enable Vehicle Detection**.

Figure 12-2 Vehicle Detection
Step 5 Optionally, check **Save VCA Picture** to save the captured pictures of vehicle detection.

Step 6 Set the arming schedule. Refer to Chapter 11.1 Configure Arming Schedule.

Step 7 Set the linkage actions. Refer to Chapter 11.2 Configure Alarm Linkage Actions.

Step 8 Configure rules, including **Area Settings, Picture, Overlay Content**, and **Blacklist and Whitelist**. Area Settings: Up to 4 lanes are selectable.

Step 9 Click **Save**.

![NOTE]

Refer to the User Manual of Network Camera for the detailed instructions for the vehicle detection.

### 12.3 Line Crossing Detection

**Purpose:**

Line crossing detection detects people, vehicles, and objects crossing a set virtual line. The detection direction can be set as bidirectional, from left to right or from right to left.

Step 1 Go to **System > Event > Smart Event**.

Step 2 Click **Line Crossing**.

![Figure 12-3 Line Crossing Detection]

Step 3 Select a **Camera** to configure.
Step 4 Check **Enable Line Crossing Detection** checkbox.

Step 5 Optionally, check **Save VCA Picture** to save the captured pictures of line crossing detection.

Step 6 Follow the steps to set the line crossing detection rules and detection areas.

3) Select an Arming Region to configure. Up to 4 arming regions are selectable.

4) Select the Direction as **A<->B**, **A->B**, or **A<-B**.

   - **A<->B**: Only the arrow on the B side shows. When an object goes across the configured line with both direction can be detected and alarms are triggered.
   - **A->B**: Only the object crossing the configured line from the A side to the B side can be detected.
   - **B->A**: Only the object crossing the configured line from the B side to the A side can be detected.

5) Drag the Sensitivity slider to set the detection sensitivity. Sensitivity range: sensitivity. The higher the value is, the more easily the detection alarm can be triggered.

6) Click Draw Region and set two points in the preview window to draw a virtual line.

Step 7 Set the arming schedule. Refer to Chapter 11.1 Configure Arming Schedule.

Step 8 Set the linkage actions. Refer to Chapter 11.1 Configure Arming Schedule.

Step 9 Select the **Arming Schedule** tab.

Step 10 Choose one day of a week and set the time segment. Up to eight time periods can be set within each day.

**NOTE**

Time periods shall not be repeated or overlapped.
Step 11 Click **Apply** to save the settings.

Step 12 Configure Alarm Linkage Actions.

Step 13 Click **Apply**.

### 12.4 Intrusion Detection

*Purpose:*

Intrusion detection function detects people, vehicle or other objects which enter and loiter in a pre-defined virtual region, and some certain actions can be taken when the alarm is triggered.

Step 1 Go to **System > Event > Smart Event**.

Step 2 Click **Intrusion**.

---

</table>
Step 3 Select a **Camera** to configure.

Step 4 Check **Enable Intrusion Detection**.

Step 5 Optionally, check **Save VCA Picture** to save the captured pictures of intrusion detection.

Step 6 Follow the steps to set the detection rules and detection areas.

1) Select a Virtual Panel to configure. Up to 4 virtual panels are selectable.
2) Drag the sliders to set Time Threshold, Sensitivity, and Percentage.
   - **Time Threshold**: The threshold for the time of the object loitering in the region. When the duration of the object in the defined detection area is longer than the threshold, device will trigger an alarm. Its range is [1s-10s].
   - **Sensitivity**: The size of the object that can trigger the alarm. The higher the value is, the more easily the detection alarm can be triggered. Its range is [1-100].
   - **Percentage**: The ratio of the in-region part of the object that can trigger the alarm. For example, if the percentage is 50%, when the object enters the region and occupies half of the whole region, device will trigger an alarm. Its range is [1-100].
3) Click Draw Region and draw a quadrilateral in the preview window by specifying four vertexes of the detection region.

Step 7 Set the arming schedule. Refer to Chapter 11.1 **Configure Arming Schedule**.
Step 8 Set the linkage actions. Refer to Chapter 11.2 Configure Alarm Linkage Actions.

Step 9 Click Apply.

12.5 Region Entrance Detection

*Purpose:*

Region entrance detection function detects objects that enter a pre-defined virtual region from the outside place.

Step 1 Go to System Management > Event Settings > Smart Event.

Step 2 Click the Region Entrance Detection item.

![Image of Region Entrance Detection](image)

Figure 12-6 Region Entrance Detection

Step 3 Select a Camera to configure.

Step 4 Check Enable Region Entrance Detection checkbox.

Step 5 Optionally, check Save VCA Picture checkbox to save the captured pictures of region entrance detection.

Step 6 Follow the steps to set the detection rules and detection areas.

7) Select an Arming Region to configure. Up to 4 regions are selectable.

8) Drag the sliders to set Sensitivity.

*Sensitivity*: The higher the value is, the more easily the detection alarm can be triggered. Its range is [0-100].
9) Click **Draw Region** and draw a quadrilateral in the preview window by specifying four vertexes of the detection region.

Step 7 Configure **Arming Schedule** and **Linkage Action**.

Step 8 Click **Apply**.

### 12.6 Region Exiting Detection

**Purpose:**

Region exiting detection function detects objects that exit from a pre-defined virtual region.

Step 1 Go to **System > Event > Smart Event**.

Step 2 Click **Region Exiting**.

![Figure 12-7 Region Exiting Detection](image)

Step 3 Select a **Camera** to configure.

Step 4 Check **Enable Region Exiting Detection**.

Step 5 Optionally, check **Save VCA Picture** to save the captured pictures of region exiting detection.

Step 6 Follow the steps to set the detection rules and detection areas.

10) Select an Arming Region to configure. Up to 4 regions are selectable.

11) Drag the sliders to set Sensitivity.

**Sensitivity:** The higher the value is, the more easily the detection alarm can be triggered. Its range is [0-100].
12) Click Draw Region and draw a quadrilateral in the preview window by specifying four vertexes of the detection region.

Step 7 Set the arming schedule. Refer to Chapter 11.1 Configure Arming Schedule.

Step 8 Set the linkage actions. Refer to Chapter 11.2 Configure Alarm Linkage Actions.

Step 9 Click Apply.

12.7 Unattended Baggage Detection

**Purpose:**

Unattended baggage detection function detects the objects left over in the pre-defined region such as the baggage, purse, dangerous materials, etc., and a series of actions can be taken when the alarm is triggered.

Step 1 Go to System > Event > Smart Event.

Step 2 Click Unattended Baggage.

Step 3 Select a Camera to configure.

Step 4 Check **Enable Unattended Baggage Detection**.

Step 5 Optionally, check **Save VCA Picture** to save the captured pictures of unattended baggage detection.

Step 6 Follow the steps to set the detection rules and detection areas.
13) Select an **Arming Region** to configure. Up to 4 regions are selectable.

14) Drag the sliders to set **Time Threshold** and **Sensitivity**.

**Time Threshold**: The time of the objects left over in the region. If the value is 10, alarm is triggered after the object is left and stayed in the region for 10s. Its range is [5s-20s].

**Sensitivity**: Similarity degree of the background image. The higher the value is, the more easily the detection alarm can be triggered.

15) Click **Draw Region** and draw a quadrilateral in the preview window by specifying four vertexes of the detection region.

---

**Step 7** Set the arming schedule. Refer to Chapter 11.1 Configure Arming Schedule.

**Step 8** Set the linkage actions. Refer to Chapter 11.2 Configure Alarm Linkage Actions.

**Step 9** Click **Apply**.

---

### 12.8 Object Removal Detection

**Purpose:**

Object removal detection function detects the objects removed from the pre-defined region, such as the exhibits on display, and a series of actions can be taken when the alarm is triggered.

**Step 1** Go to **System > Event > Smart Event**.

**Step 2** Click **Object Removable**.

---

![Object Removal Detection](image-url)

*Figure 12-9 Object Removal Detection*
Step 3 Select a **Camera** to configure.

Step 4 Check **Enable Object Removable Detection**.

Step 5 Optionally, check **Save VCA Picture** to save the captured pictures of object removable detection.

Step 6 Follow the steps to set the detection rules and detection areas.

   16) Select an Arming Region to configure. Up to 4 regions are selectable.
   17) Drag the sliders to set **Time Threshold** and **Sensitivity**.

   **Time Threshold**: The time of the objects removed from the region. If the value is 10, alarm is triggered after the object disappeared from the region for 10s. Its range is [5s-20s].

   **Sensitivity**: The similarity degree of the background image. Usually, when the sensitivity is high, a very small object taken from the region can trigger the alarm.

   18) Click **Draw Region** and draw a quadrilateral in the preview window by specifying four vertexes of the detection region.

Step 7 Set the arming schedule. Refer to Chapter 11.1 Configure Arming Schedule.

Step 8 Set the linkage actions. Refer to Chapter 11.2 Configure Alarm Linkage Actions.

Step 9 Click **Apply**.

### 12.9 Audio Exception Detection

**Purpose:**

Audio exception detection detects the abnormal sounds in the surveillance scene, such as the sudden increase/decrease of the sound intensity.

Step 1 Go to **System > Event > Smart Event**.

Step 2 Click **Audio Exception**.

![Audio Exception Detection](image.png)

**Figure 12-10 Audio Exception Detection**
Step 3 Select a **Camera** to configure.

Step 4 Optionally, check **Save VCA Picture** to save the captured pictures of audio exception detection.

Step 5 Follow the steps to set the detection rules.

4) Select the **Exception Detection** tab.

5) Check the checkboxes of **Audio Loss Exception**, **Sudden Increase of Sound Intensity Detection**, or **Sudden Decrease of Sound Intensity Detection**.

**Audio Loss Exception**: Detects the sound steep rise in the surveillance scene. You can set the detection sensitivity and threshold for sound steep rise. You need to configure its **Sensitivity** and **Sound Intensity Threshold**.

**Sensitivity**: The smaller the value is, the more severe the change should be to trigger the detection. Range [1-100].

**Sound Intensity Threshold**: It can filter the sound in the environment. The louder the environment sound, the higher the value should be. Adjust it according to the environment. Range [1-100].

**Sudden Decrease of Sound Intensity Detection**: Detects the sound steep drop in the surveillance scene. You need set the detection sensitivity [1-100].

Step 6 Set the arming schedule. Refer to Chapter 11.1 Configure Arming Schedule.

Step 7 Set the linkage actions. Refer to Chapter 11.2 Configure Alarm Linkage Actions.

Step 8 Click **Apply**.

### 12.10 Sudden Scene Change Detection

**Purpose**:

Scene change detection detects the change of surveillance environment affected by the external factors, such as the intentional rotation of the camera.

Step 1 Go to **System > Event > Smart Event**.

Step 2 Click **Sudden Scene Change**.
Step 3 Select a Camera to configure.

Step 4 Check Enable Sudden Scene Change Detection.

Step 5 Optionally, check Save VCA Picture to save the captured pictures of sudden scene change detection.

Step 6 Drag the Sensitivity slider to set the detection sensitivity. Sensitivity range: [1-100]. The higher the value is, the more easily the change of scene can trigger the alarm.

Step 7 Set the arming schedule. Refer to Chapter 11.1 Configure Arming Schedule.

Step 8 Set the linkage actions. Refer to Chapter 11.2 Configure Alarm Linkage Actions.

Step 9 Click Apply.

12.11 Defocus Detection

*Purpose:*

The image blur caused by defocus of the lens can be detected.

Step 1 Go to System > Event > Smart Event.

Step 2 Click Defocus.
Step 3 Select a **Camera** to configure.

Step 4 Check **Enable Defocus Detection**.

Step 5 Optionally, check **Save VCA Picture** to save the captured pictures of defocus detection.

Step 6 Drag the **Sensitivity** slider to set the detection sensitivity. Sensitivity range: [1-100]. The higher the value is, the more easily the defocus image can be detected.

Step 7 Set the arming schedule. Refer to Chapter 11.1 Configure Arming Schedule.

Step 8 Set the linkage actions. Refer to Chapter 11.2 Configure Alarm Linkage Actions.

Step 9 Click **Apply**.

### 12.12 PIR Alarm

**Purpose:**

A PIR (Passive Infrared) alarm is triggered when an intruder moves within the detector vision field. The heat energy dissipated by a person, or any other warm-blooded creature such as dogs, cats, etc., can be detected.

Step 1 Go to **System > Event > Smart Event**.

Step 2 Click **PIR Alarm**.
Step 3 Select a **Camera** to configure.

Step 4 Check **PIR Alarm**.

Step 5 Optionally, check **Save VCA Picture** to save the captured pictures of PIR alarm.

Step 6 Set the arming schedule. Refer to Chapter 11.1 Configure Arming Schedule.

Step 7 Set the linkage actions. Refer to Chapter 11.2 Configure Alarm Linkage Actions.

Step 8 Click **Apply**.
Chapter 13 Smart Analysis

With the configured VCA detection, the device supports the smart analysis for people counting and heat map.

13.1 People Counting

**Purpose:**

The Counting is used to calculate the number of people entered or left a certain configured area and form in daily/weekly/monthly/annual reports for analysis.

Step 1 Go to **Smart Analysis > Counting**.

Step 2 Select the camera.

Step 3 Select the report type to **Daily Report, Weekly Report, Monthly Report**, or **Annual Report**.

Step 4 Set the **Date** to analyze. Then the people counting graphic will show.

![Figure 13-1 People Counting Interface](image)

Step 5 (Optional) Click **Export** to export the report in excel format.

13.2 Heat Map

**Purpose:**

Heat map is a graphical representation of data. The heat map function is usually used to analyze how many people visited and stayed in a specified area.

The heat map function must be supported by the connected IP camera and the corresponding configuration must be set.

Step 1 Go to **Smart Analysis > Heat Map**.

Step 2 Select a camera.
Step 3 Select the report type as **Daily Report, Weekly Report, Monthly Report**, or **Annual Report**.

Step 4 Set the **Data** to analyze.

![Heat Map Interface](image)

**Figure 13-2 Heat Map Interface**

Step 5 Click **Counting**. Then the results displayed in graphics marked in different colors will show.

**NOTE**

As shown in the figure above, red color block (255, 0, 0) indicates the most welcome area, and blue color block (0, 0, 255) indicates the less-popular area.

Step 6 (Optional) Click **Export** to export the statistics report in excel format.
Chapter 14 Network Settings

14.1 Configure TCP/IP Settings

Purpose

TCP/IP settings must be properly configured before you can operate the device over network.

Step 1 Go to System > Network > TCP/IP.

![TCP/IP Settings](image)

Figure 14-1 TCP/IP Settings

Step 2 Select **Net-Fault Tolerance** or **Multi-Address Mode** under Working Mode.

- **Net-Fault Tolerance**: The two NIC cards use the same IP address, and you can select the main NIC to LAN1 or LAN2. By this way, in case of one NIC card failure, the device will automatically enable the other standby NIC card so as to ensure the normal running of the whole system.

- **Load Balance**: By using the same IP address and two NIC cards share the load of the total bandwidth, which enables the system to provide two Gigabit network capacity.

- **Multi-address Mode**: The parameters of the two NIC cards can be configured independently. You can select LAN1 or LAN2 under Select NIC for parameter settings. You can select one NIC card as default route. And then the system is connecting with the extranet the data will be forwarded through the default route.

Step 3 Configure other IP settings as needed.
Check Enable DHCP to obtain IP settings automatically if a DHCP server is available in the network.

Valid range of MTU value is 500 to 9676.

Step 4 Click Apply.

14.2 Configure Hik-Connect

Purpose

Hik-Connect provides mobile phone application as well as service platform to access and manage your connected devices with remote access to the surveillance system.

Step 1 Go to System > Network > Advanced > Platform Access.

Enable

Access Type

Server Address

Enable Stream Encrypt...

Verification Code

Status

Scan the QR code via the Ezviz app application to add the device.

Figure 14-2 Hik-Connect Settings

Step 2 Check Enable and a Service Terms window will pop up. Create your verification code, check to agree to the service terms and click OK.
Step 3 (Optional) Check **Custom** and enter the server address as needed. The default server address is dev.hik-connect.com.

Step 4 (Optional) Check **Enable Stream Encryption** and verification code will be required for remote access and live view.

Step 5 Click **Apply**.

![NOTE]

- After configuration, you can access and manage your devices through Hik-Connect app or www.hik-connect.com.
- For more detailed instructions of Hik-Connect, please refer to the help on www.hik-connect.com.

### 14.3 Configure DDNS

**Purpose**

You can set Dynamic DNS service for network access. Different DDNS modes are available: DynDNS, PeanutHull, and NO-IP.

**Before You Start**

You must register DynDNS, PeanutHull and NO-IP services with your ISP before configuring DDNS settings.

Step 1 Go to **System > Network > TCP/IP > DDNS**.

Step 2 Check **Enable**.

Step 3 Select **DynDNS** under **DDNS Type**.

![NOTE]

PeanutHull and NO-IP are also available under DDNS Type, and required information should be entered accordingly.

Step 4 Enter **Server Address** for DynDNS (i.e. members.dyndns.org).

Step 5 Under **Device Domain Name**, enter the domain name obtained from the DynDNS website.

Step 6 Enter the **User Name** and **Password** registered in the DynDNS website.
Step 7 Click **Apply**.

### 14.4 Configure PPPoE

If the device is connected to Internet through PPPoE, you need to configure user name and password accordingly under **System > Network > TCP/IP > PPPoE**.

**NOTE**

Contact your Internet service provider for details about PPPoE service.

### 14.5 Configure NTP

**Purpose**

Connection to a network time protocol (NTP) server can be configured on your device to ensure the accuracy of system date and time.

**Step 1** Go to **System > Network > TCP/IP > NTP**.
Step 2 Check **Enable**.

Step 3 Configure NTP settings as need.

- **Interval (min)**: Time interval between two time synchronization with NTP server.
- **NTP Server**: IP address of the NTP server.
- **NTP Port**: Port of the NTP server.

Step 4 Click **Apply**.

### 14.6 Configure SNMP

**Purpose**

You can configure SNMP settings to get device status and parameter information.

**Before You Start**

Download the SNMP software to receive device information via SNMP port. By setting the trap address and port, the device is allowed to send alarm event and exception message to the surveillance center.

Step 1 Go to **System > Network > Advanced > SNMP**.
Step 2 Check **Enable**. A message will pop up to prompt possible security risk and click **Yes** to continue.

Step 3 Configure the SNMP settings as needed.

- **Trap Address**: IP address of the SNMP host.
- **Trap Port**: Port of the SNMP host.

Step 4 Click **Apply**.

### 14.7 Configure Email

**Purpose**

The system can be configured to send an Email notification to all designated users when a specified event occur, such as an alarm or motion event is detected, or the administrator password is changed, etc.

**Before You Start**

The device must be connected to a local area network (LAN) that contains an SMTP mail server. The network must also be connected to either an intranet or the Internet depending on the location of the e-mail accounts to which you want to send notification.
Step 1 Go to **System > Network > Advanced > Email**.

![Email Settings](image)

**Figure 14-6 Email Settings**

Step 2 Configure the following Email settings.

- **Enable Server Authentication**: Check to enable the function if the SMTP server requires user authentication and enter user name and password accordingly.
- **SMTP Server**: The IP address of SMTP Server or host name (e.g., smtp.263xmail.com).
- **SMTP Port**: The SMTP port. The default TCP/IP port used for SMTP is 25.
- **Enable SSL/TLS**: Check to enable SSL/TLS if required by the SMTP server.
- **Sender**: The name of the sender.
- **Sender’s Address**: Sender’s Address.
- **Select Receivers**: Select the receiver. Up to 3 receivers can be configured.
- **Receiver**: The name of the receiver.
- **Receiver's Address**: The Email address of user to be notified.
- **Enable Attached Picture**: Check to enable the function if you want to send email with attached alarm images. The interval is the time between two adjacent alarm images.

Step 3 Click **Apply**.

Step 4 (Optional) Click **Test** to send a test email.
14.8 Configure Ports

You can configure different types of ports to enable relevant functions.

Go to System > Network > Advanced > More Settings and configure port settings as needed.

- **Alarm Host IP/Port**: With a remote alarm host configured, the device will send the alarm event or exception message to the host when an alarm is triggered. The remote alarm host must have the client management system (CMS) software installed.

  The Alarm Host IP refers to the IP address of the remote PC on which the CMS software (e.g., iVMS-4200) is installed, and the Alarm Host Port (7200 by default) must be the same as the alarm monitoring port configured in the software.

- **Server Port**: Server port (8000 by default) should be configured for remote client software access and its valid range is 2000 to 65535.

- **HTTP Port**: HTTP port (80 by default) should be configured for remote web browser access.

- **Multicast IP**: Multicast can be configured to enable live view for cameras that exceed the maximum number allowed through network. A multicast IP address covers Class-D IP ranging from 224.0.0.0 to 239.255.255.255 and it is recommended to use the IP address ranging from 239.252.0.0 to 239.255.255.255.

  When adding a device to the CMS software, the multicast address must be the same as that of the device.

- **RTSP Port**: RTSP (Real Time Streaming Protocol) is a network control protocol designed for use in entertainment and communications systems to control streaming media servers. The port is 554 by default.

Chapter 15 Hot Spare Device Backup

Purpose:
The device can form an N+1 hot spare system. The system consists of several working devices and a hot spare device; when the working device fails, the hot spare device switches into operation, thus increasing the reliability of the system. Please contact dealer for details of models which support the hot spare function.

A bidirectional connection shown in the figure below is required to be built between the hot spare device and each working device.

Before you start:
At least 2 devices are online.

15.1 Set Hot Spare Device

Purpose:
Hot spare devices takes over working device tasks when working device fails.

Step 1 Go to System > Hot Spare.

Step 2 Set the Work Mode as Hot Spare Mode.

Step 3 Click Apply.

Step 4 Click Yes in popup attention box to reboot the device.
The camera connection will be disabled when the device works in the hot spare mode. It is highly recommended to restore the defaults of the device after switching the working mode of the hot spare device to normal mode to ensure the normal operation afterwards.

15.2 Set Working Device

Step 1 Go to System > Hot Spare.
Step 2 Set the Work Mode as Normal Mode.
Step 3 Check Enable.
Step 4 Enter the IP address, user name, and password of hot spare device.

![Figure 15-3 Hot Spare](image)

Step 5 Click Apply.

15.3 Manage Hot Spare System

Step 1 Go to System > Hot Spare in hot spare device.
Step 2 Check working devices from the device list and click Add to link the working device to the hot spare device.

A hot spare device can connect up to 32 working devices.
<table>
<thead>
<tr>
<th>Working Status</th>
<th>Description</th>

<td>The working device gets offline, the hot spare device will record the video of the IP camera connected to the working device for backup. The record backing up can be functioned for 1 working device at a time.</td>
</tr>
<tr>
<td>Synchronizing</td>
<td>The working device comes online, the lost video files will be restored by the record synchronization function. The record synchronization function can be enabled for 1 working device at a time.</td>
</tr>
</tbody>
</table>
Chapter 16 System Maintenance

16.1 Storage Device Maintenance

16.1.1 Configure Disk Clone

*Purpose:*
Select the HDDs to clone to eSATA HDD.

*Before you start:*
Connect an eSATA disk to the device.

Step 1 Go to **Maintenance > HDD Operation > HDD Clone**.

![HDD Clone](image)

Step 2 Check the HDD to clone. The capacity of selected HDD must match the capacity of clone destination.

Step 3 Click **Clone**.

Step 4 Click **Yes** on popup message box to continue clone.
16.1.2 S.M.A.R.T Detection

**Purpose:**

The device provides the HDD detection function such as the adopting of the S.M.A.R.T. and the Bad Sector Detection technique. The S.M.A.R.T. (Self-Monitoring, Analysis and Reporting Technology) is a monitoring system for HDD to detect and report on various indicators of reliability in the hopes of anticipating failures.

Step 1 Go to **Maintenance > HDD Operation > S.M.A.R.T.**

Step 2 Select the HDD to view its S.M.A.R.T information list.

Step 3 Select the self-test types as **Short Test, Expanded Test** or the **Conveyance Test**.

Step 4 Click **Self-Test** to start the S.M.A.R.T. HDD self-evaluation.

Step 5 The related information of the S.M.A.R.T. is shown on the interface. You can check the HDD status.
If you want to use the HDD even when the S.M.A.R.T. checking is failed, you can check the checkbox of the **Continue to use the disk when self-evaluation is failed** item.

### 16.1.3 Bad Sector Detection

**Step 1** Go to **Maintenance > HDD Operation > Bad Sector Detection**.

**Step 2** Select the HDD No. in the dropdown list you want to configure.

**Step 3** Select **All Detection** or **Key Area Detection** as the detection type.

**Step 4** Click the **Self-Test** button to start the detection.
You can also pause/resume or cancel the detection.

After testing completed, you can click **Error information** button to see the detailed damage information.

### 16.1.4 HDD Health Detection

**Purpose:**

You can view the health status of Seagate HDD that generated after October 1th, 2017 and capacity ranges from 4 TB to 8 TB. The function helps you to troubleshoot HDD problems. Compared with S.M.A.R.T function, health detection shows HDD status with more details.

**Step 1** Go to **Maintenance > HDD Operation > Health Detection**.
16.2 Search & Export Log Files

**Purpose:**
The operation, alarm, exception and information of the device can be stored in log files, which can be viewed and exported at any time.

16.2.1 Search the Log Files

Step 1 Go to **Maintenance > Log Information**.

Step 2 Set the log search conditions, including the Time, Major Type and Minor Type.

Step 3 Click **Search** to start search log files.

The matched log files will be displayed on the list shown below.
Figure 16-6 Log Search Results

NOTE

Up to 2000 log files can be displayed each time.

Related Operation:

- Click the button or double click it to view its detailed information.
- Click the button to view the related video file.

16.2.2 Export the Log Files

Before You Start:

Connect a storage device to your device.

Step 1 Search the log files. Refer to Chapter 16.2.1 Search the Log Files.

Step 2 Select the log files you want to export, and click Export.

Or you can click Export ALL on the Log Search interface to export all the system logs to the storage device.
Step 3 On the Export interface, select the storage device from the dropdown list of Device Name.

Step 4 Select the format of the log files to be exported. Up to 15 formats are selectable.

Step 5 Click the Export to export the log files to the selected storage device.

**Related Operation:**
- Click the New Folder button to create new folder in the storage device.
- Click the Format button to format the storage device before log export.

### 16.3 Import/Export IP Camera Configuration Files

**Purpose:**
The information of added IP camera can be generated into an excel file and exported to the local device for backup, including the IP address, manage port, password of admin, etc. And the exported file can be edited on your PC, like adding or deleting the content, and copy the setting to other devices by importing the excel file to it.

**Before You Start:**
Connect a storage device to your device. For importing the configuration file, the storage device must be with the file.

Step 1 Go to Camera > IP Camera Import/Export.

Step 2 Click the IP Camera Import/Export tab, and the content of detected plugged external device appears.
Step 3 Export or import the IP camera configuration files.

- Click Export to export configuration files to the selected local backup device.
- To import a configuration file, select the file from the selected backup device and click the Import button.

**NOTE**

After the importing process is completed, you must reboot the device to activate the settings.
16.4 Import/Export Device Configuration Files

Purpose:
The configuration files of the device can be exported to local device for backup; and the configuration files of one device can be imported to multiple devices if they are to be configured with the same parameters.

Connect a storage device to your device. For importing the configuration file, the storage device must be with the file.

Before You Start:
Connect a storage device to your device. For importing the configuration file, the storage device must be with the file.

Step 1 Go to Maintenance > Import/Export

Step 2 Export or import the device configuration files.

- Click Export to export configuration files to the selected local backup device.
- To import a configuration file, select the file from the selected backup device and click the Import button.

NOTE
After having finished the import of configuration files, the device will reboot automatically.
16.5 Upgrade System

Purpose:
The firmware on your device can be upgraded by local backup device or remote FTP server.

16.5.1 Upgrade by Local Backup Device

Before You Start:
Connect your device with a local storage device with update firmware file.

Step 1 Go to Maintenance>Upgrade.

Step 2 Click the Local Upgrade tab to enter the local upgrade interface.

Step 3 Select the update file from the storage device.

Step 4 Click Upgrade to start upgrading.

Step 5 After the upgrading is complete, the device will reboot automatically to activate the new firmware.

16.5.2 Upgrade by FTP

Before you start:
Ensure the network connection of the PC (running FTP server) and the device is valid and correct. Run the FTP server on the PC and copy the firmware into the corresponding directory of your PC.

Step 1 Go to Maintenance>Upgrade.

Step 2 Click the FTP tab to enter the local upgrade interface.
Step 3 Enter the FTP Server Address in the text field.

Step 4 Click the Upgrade button to start upgrading.

Step 5 After the upgrading is complete, reboot the device to activate the new firmware.
16.6 Restore Default Settings

Step 1 Go to **Maintenance > Default**.

Step 2 Select the restoring type from the following three options.

- **Restore Defaults**: Restore all parameters, except the network (including IP address, subnet mask, gateway, MTU, NIC working mode, default route, server port, etc.) and user account parameters, to the factory default settings.

- **Factory Defaults**: Restore all parameters to the factory default settings.

- **Restore to Inactive**: Leave all settings unchanged except restore device to inactive status without admin password.

![Figure 16-11 Restore Defaults](image)

The device will reboot automatically after restoring to the default settings.

16.7 System Service

16.7.1 Network Security Settings

Disabling SADP Services

**Purpose**

You can disable SADP service to enhance the access security, e.g., when you are in the untrusted network environment.

Step 1 Go to **System > System Service > System Service**.

Step 2 Uncheck **Enable SADP** to disable the service.
HTTP

You can choose to disable the HTTP, or set the HTTP authentication when it is enabled as demand to enhance the access security.

**NOTE**

By default, the HTTP service is enabled.

**Setting HTTP Authentication**

**Purpose**

If you need to enable the HTTP service, you can set the HTTP authentication to enhance the access security.

Step 1 Go to System > System Service > System Service.

![Figure 16-12 HTTP Authentication](image)

Step 2 Check the Enable HTTP to enable the HTTP service.

Step 3 Select the digest as the HTTP Authentication in the drop-down list.

Step 4 Click Save to save the settings.

**NOTE**

Two authentication types are selectable: digest and digest/basic. For security reasons, it is recommended to select digest as the authentication type.

**Disabling HTTP**

**Purpose**

The admin user account can disable the HTTP service from the GUI or the web browser.

After the HTTP is disabled, all its related services, including the ISAPI, Onvif and Gennetc, will terminate as well.

Step 5 Go to System > System Service > System Service.

Step 6 Uncheck the Enable HTTP to disable the HTTP service.
RTSP Authentication

_Purpose_
You can specifically secure the stream data of live view by setting the RTSP authentication.

**Step 1** Go to **System > System Service > System Service**.

![Figure 16-13 RTSP Authentication](image)

**Step 2** Select the authentication type.

**NOTE**
Two authentication types are selectable: **digest** and **digest/basic**. If you select **digest**, as the RTSP authentication, only the request with digest authentication can access the video stream by the RTSP protocol via the IP address. For security reasons, it is recommended to select digest as the authentication type.

**Step 3** Click **Save** to save the settings.

16.7.2 Managing ONVIF User Accounts

_Purpose_
For the third-party camera connection to the device via ONVIF, you can enable ONVIF function and manage the user accounts.

**Step 1** Go to **System > System Service > ONVIF**.

**Step 2** Check **Enable ONVIF** to enable the ONVIF access management.

**Step 3** Click **Add** to enter the Add User interface.
Step 4 Edit the user name, and enter the strong password.

Step 5 Select the user level to **Media User**, **Operator** and **Admin**.

Step 6 Click **OK** to save the settings.

**Result:**

The added user accounts have the permission to connect other devices to the device via ONVIF protocol.

**NOTE**

ONVIF protocol is disabled by default.

### 16.7.3 Managing IP Camera Activation

When you activate the device for the first-time access, you can set the activation password for the IP camera (s) as well. Refer to Chapter 2.2 Activate the Device. And you can also manage the password to enhance the security.

Step 1 Go to **System > System Service > IP Camera Activation**.

Step 2 Check the **Change Password** to enable the permission.

Step 3 Enter the admin password of the device to obtain the permission.
Step 4 In the text filed of the **IP Camera Activation Password**, enter the new strong password for the cameras.

Step 5 Click **Apply** to have the following pop-up attention box.

Step 6 Click **Yes** to duplicate the current password to the IP cameras which are connected with the default protocol.
Chapter 17 General System Settings

17.1 Configure General Settings

Purpose:
You can configure the BNC output standard, VGA output resolution, mouse pointer speed through the System > General interface.

Step 1 Go to System > General.

![General Settings Interface](image)

Figure 17-1 General Settings Interface

Step 2 Configure the following settings.

**Language:** The default language used is *English*.

**Output Standard:** Select the output standard to NTSC or PAL, which must be the same with the video input standard.

**Resolution:** Configure the resolution of the video output.

**Device Name:** Edit the name of the device

**Device No.:** Edit the serial number of the device. The Device No. can be set in the range of 1~255, and the default No. is 255. The number is used for the remote and keyboard control.
**Auto Logout**: Set timeout time for menu inactivity. E.g., when the timeout time is set to 5 *Minutes*, then the system will exit from the current operation menu to live view screen after 5 minutes of menu inactivity.

**Mouse Pointer Speed**: Set the speed of mouse pointer; 4 levels are configurable.

**Enable Wizard**: Enable/disable the Wizard when the device starts up.

**Enable Password**: Enable/disable the use of the login password.

Step 3 Click the **Apply** button to save the settings.

### 17.2 Configure Date & Time

Step 1 Go to **System > General**.

Step 2 Configure the date and time.

**Time Zone**: Select the time zone.

**Date Format**: Select the date format.

**System Date**: Select the system date.

**System Time**: Set the system time.

![Figure 17-2 Date and Time Settings](image)

Step 3 Click the **Apply** button to save the settings.
17.3 Configure DST Settings

The DST (daylight saving time) refers to the period of the year when clocks are moved one period ahead. In some areas worldwide, this has the effect of creating more sunlit hours in the evening during months when the weather is the warmest.

We advance our clocks ahead a certain period (depends on the DST bias you set) at the beginning of DST, and move them back the same period when we return to standard time (ST).

Step 1 Go to System > General.

Step 2 Check the Enable DST.

Step 3 Select the DST mode to Auto or Manual.

- **Auto**: automatically enable the default DST period according to the local DST rules.
- **Manual**: manually set the start time and end time of the DST period, and the DST bias.
  
  **DST Bias**: set the time (30/60/90/120 minutes) offset from the standard time.

**Example**: The DST begins at 2:00 a.m. on the second Sunday of March and ends at 2:00 a.m. on the first Sunday of November, with 60 minutes ahead.

Step 4 Click the Apply button to save the settings.

17.4 Manage User Accounts

**Purpose:**

The Administrator user name is admin and the password is set when you start the device for the first time. The Administrator has the permission to add and delete user and configure user parameters.

17.4.1 Add a User

Step 1 Go to System > User.
Step 2 Click **Add** to enter the operation permission interface.

Step 3 Enter the admin password and click **OK**.

Step 4 In the Add User interface, enter the information for new user, including **User Name**, **Password**, **Confirm** (password), **User Level** (Operator/Guest) and **User’s MAC Address**.

---

**WARNING**

**Strong Password recommended**—We highly recommend you create a strong password of your own choosing (Using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers, and special characters.) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

- **User Level**: Set the user level to Operator or Guest. Different user levels have different operating permission.
Operator: The Operator user level has permission of Two-way Audio in Remote Configuration and all operating permission in Camera Configuration by default.

Guest: The Guest user has no permission of Two-way Audio in Remote Configuration and only has the local/remote playback in the Camera Configuration by default.

User’s MAC Address: The MAC address of the remote PC which logs onto the device. If it is configured and enabled, it only allows the remote user with this MAC address to access the device.

Step 5 Click OK to finish the new user account adding.

**Result:** In the User Management interface, the added new user is displayed on the list.

![User List](image)

**Figure 17-6 User List**

17.4.2 Set the Permission for a User

For the added user, you can assign the different permissions, including the local and remote operation for the device.

Step 1 Go to **System > User**.

Step 2 Select a user from the list and then click the **button to enter the permission settings interface.**
Step 3 Set the operating permission of Local Configuration, Remote Configuration and Camera Configuration for the user.

- **Local Configuration**
  - **Local Log Search**: Searching and viewing logs and system information of device.
  - **Local Parameters Settings**: Configuring parameters, restoring factory default parameters and importing/exporting configuration files.
  - **Local Camera Management**: The adding, deleting and editing of IP cameras.
  - **Local Advanced Operation**: Operating HDD management (initializing HDD, setting HDD property), upgrading system firmware, clearing I/O alarm output.
  - **Local Shutdown Reboot**: Shutting down or rebooting the device.

- **Remote Configuration**
  - **Remote Log Search**: Remotely viewing logs that are saved on the device.
  - **Remote Parameters Settings**: Remotely configuring parameters, restoring factory default parameters and importing/exporting configuration files.
  - **Remote Camera Management**: Remote adding, deleting and editing of the IP cameras.
  - **Remote Video Output Control**: Sending remote button control signal.
  - **Two-Way Audio**: Realizing two-way radio between the remote client and the device.
Remote Alarm Control: Remotely arming (notify alarm and exception message to the remote client) and controlling the alarm output.

Remote Advanced Operation: Remotely operating HDD management (initializing HDD, setting HDD property), upgrading system firmware, clearing I/O alarm output.

Remote Shutdown/Reboot: Remotely shutting down or rebooting the device.

Camera Configuration

Remote Live View: Remotely viewing live video of the selected camera (s).

Local Manual Operation: Locally starting/Stopping manual recording and alarm output of the selected camera (s).

Remote Manual Operation: Remotely starting/Stopping manual recording and alarm output of the selected camera (s).

Local Playback: Locally playing back recorded files of the selected camera (s).

Remote Playback: Remotely playing back recorded files of the selected camera (s).

Local PTZ Control: Locally controlling PTZ movement of the selected camera (s).

Remote PTZ Control: Remotely controlling PTZ movement of the selected camera (s).

Local Video Export: Locally exporting recorded files of the selected camera (s).

Local Live View: View live video of the selected camera(s) in local.

Step 4 Click OK to save the settings.

Only the admin user account has the permission of restoring factory default parameters.

17.4.3 Edit the Admin User

For the admin user account, you can modify its password the unlock pattern.

Step 1 Go to System > User.

Step 2 Select the admin user from the list and click Modify.
Step 3 Edit the admin user information as demand, including the new admin password (strong password is required), and MAC address.

Step 4 Edit the unlock pattern for the admin user account.

19) Check the checkbox of **Enable Unlock Pattern** to enable the use of unlock pattern when logging in to the device.

20) Use the mouse to draw a pattern among the 9 dots on the screen, and release the mouse when the pattern is done.

**NOTE**

17.5 Please refer to Chapter 2.2 **Activate the Device**

**Purpose:**

For the first-time access, you need to activate the device by setting an admin password. No operation is allowed before activation. You can also activate the device via Web Browser, SADP or Client Software.

Step 1 Input the same password in the text field of **Create New Password** and **Confirm New Password**.
NOTE

You can click the [ ] to show the characters input.

![Figure 17-9 Setting Admin Password]

WARNING

We highly recommend you create a strong password of your own choosing (Using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers, and special characters.) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

Step 2 In the IP Camera Activation text field, enter the password to activate the IP camera(s) connected to the device.

Step 3 Optionally, check the Export GUID to export the GUID for future password resetting.

Step 4 Click OK to save the password and activate the device.

NOTE

- After the device is activated, you should properly keep the password.
- When you have enabled the Export GUID, continue to export the GUID file to the USB flash driver for the future password resetting.
- You can duplicate the password to the IP cameras that are connected with default protocol.

Configure Unlock Pattern for Login for detailed instructions.
Step 5 Click the \( \text{Export GUID} \) button to enter the reset password interface to export the GUID file for the admin user account.

When the admin password is changed, you can export the new GUID to the connected U flash disk in the Import/Export interface for the future password resetting.

Step 6 Click the \( \text{OK} \) button to save the settings.

Step 7 For the Operator or Guest user account, you can also click the \( \text{edit} \) button on the user management interface to edit the permission.

17.5.2 Set Local Live View Permission for Non-Admin Users

Step 1 Go to System > User.

Step 2 Click \( \text{admin user} \) of admin user.

Step 3 Enter admin password and click OK.

Step 4 Select cameras that non-admin user can view in local and click OK.
Step 5 Click of non-admin user.

Step 6 Enter Camera Configuration tab.

Step 7 Select Camera Permission as Local Live View.

Step 8 Select cameras to live view.

Step 9 Click OK.

17.5.3 Edit the Operator/Guest User

You can edit the user information, including user name, password, permission level and MAC address. Check the checkbox of Change Password if you want to change the password, and input the new password in the text field of Password and Confirm. A strong password is recommended.

Step 1 Go to System > User.

Step 2 Select a user from the list and click Modify.
Step 3 Edit the user information as demand, including the new password (strong password is required), and MAC address.

17.5.4 Delete a User

The admin user account has the permission to delete the operator/guest user account.

Step 1 Go to System > User.
Step 2 Select a user from the list.
Step 3 Click Delete to delete the selected user account.
Chapter 18 Server Board Operation

18.1 Enable Server Board Protection Mode

Purpose:
If the Server Board Protection Mode function is enabled, when the server board has abnormally shut down for one minute, the storage board will restart the server board.

Step 1 Go to System > General.
Step 2 Click the More Settings tab to enter the More Settings interface.
Step 3 Check the checkbox of Server Board Protection Mode to enable the function.

NOTE
The function is disabled by default.
Step 4 Click Apply to save the settings.

18.2 Installing Operation System

Operation system can be installed in the server board. Ubuntu Linux operation system is installed when delivered. You can install following Microsoft Windows as well: Windows 7E, Windows 10, and Windows Server 2012 R2. For detailed steps about operation system installation, refer to the Installation Guide.
## Chapter 19 Appendix

### 19.1 Specifications

<table>
<thead>
<tr>
<th>Model</th>
<th>DS-9000AI-S16-D</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Hardware</strong></td>
<td></td>
</tr>
<tr>
<td>Structure</td>
<td>Pluggable HDD trays with no-cable design and dual-board structure (server board and storage board) realize effective task and storage management.</td>
</tr>
<tr>
<td>Chassis</td>
<td>3U chassis of thick galvanized steel</td>
</tr>
<tr>
<td>Dimensions (W × D × H)</td>
<td>487 × 560 × 133 mm (19.2 × 22.0 × 5.2 inch)</td>
</tr>
<tr>
<td>Bezel</td>
<td>Frosted aluminum alloy bezel. Hot swapping.</td>
</tr>
<tr>
<td>Multi-functional mounting ears</td>
<td>Integrates status indicators, functional buttons, USB interfaces, and handles. Supports one-key muting.</td>
</tr>
<tr>
<td>Fan</td>
<td>Redundant dual-ball bearing fan. Hot swapping and smart speed adjusting.</td>
</tr>
<tr>
<td>Power supply</td>
<td>Redundant power supply module meets the Intel CRPS (Common Redundant Power Supply) standard. 100 to 240 VAC wide-range power input</td>
</tr>
<tr>
<td>Guide rail</td>
<td>External guide rail for installing device into a rack</td>
</tr>
<tr>
<td><strong>Server board</strong></td>
<td></td>
</tr>
<tr>
<td>Processor</td>
<td>Quad-Core Intel® Xeon® Processor E3 VS Series</td>
</tr>
<tr>
<td>Memory</td>
<td>8GB DDR4. ECC parity. Extendable up to 64 GB</td>
</tr>
<tr>
<td>Video card</td>
<td>Intel® HD Graphics P530</td>
</tr>
<tr>
<td>System disk</td>
<td>Industrial-level SSD with 128 GB capacity</td>
</tr>
<tr>
<td>Operation system</td>
<td>Ubuntu Linux is installed by default. Microsoft Windows, including Windows 7E, Windows 10, and Windows Server 2012 R2 can be installed</td>
</tr>
<tr>
<td>Video output</td>
<td>2 × HDMI interface with resolution up to 4K; 1 × VGA interface with resolution up to 1080p. HDMI 1 and VGA simultaneous output mode is enabled by default.</td>
</tr>
<tr>
<td>LAN</td>
<td>4 × RJ45 10M/100M/1000M self-adaptive Ethernet interface</td>
</tr>
<tr>
<td>USB interface</td>
<td>Front panel: 2 × USB 2.0; Rear panel: 2 × USB 3.0</td>
</tr>
<tr>
<td>Audio input/output</td>
<td>2 × RCA interface. One for audio input and one for audio output</td>
</tr>
<tr>
<td>SATA interface</td>
<td>Four 2.5-inch HDDs are connectable</td>
</tr>
<tr>
<td><strong>Storage board</strong></td>
<td></td>
</tr>
<tr>
<td>Processor</td>
<td>Dual-Core Intel Processor</td>
</tr>
<tr>
<td>Operation system</td>
<td>Embedded Linux</td>
</tr>
<tr>
<td>Audio/video management</td>
<td>IPC video input: 128-ch</td>
</tr>
<tr>
<td>Audio/video interface</td>
<td>HDMI interface: Two independent HDMI outputs, resolution: 4K (4096x2160), 4K (3840x2160)/30Hz, 2K (2560x1440)/60Hz, 1080p (1920x1080)/60Hz, UXGA (1600x1200)/60Hz, SXGA (1280x1024)/60Hz, 720p (1280x720)/60Hz, XGA (1024x768)/60Hz</td>
</tr>
<tr>
<td>Audio output</td>
<td>1-ch, RCA (2.0 Vp-p, 1 KΩ)</td>

</tr>
</tbody>
</table>
19.2 Glossary

- **Dual Stream**: Dual stream is a technology used to record high resolution video locally while transmitting a lower resolution stream over the network. The two streams are generated by the device, with the main stream having a maximum resolution of 4CIF and the sub-stream having a maximum resolution of CIF.

- **HDD**: Acronym for Hard Disk Drive. A storage medium which stores digitally encoded data on platters with magnetic surfaces.

- **DHCP**: Dynamic Host Configuration Protocol (DHCP) is a network application protocol used by devices (DHCP clients) to obtain configuration information for operation in an Internet Protocol network.

- **HTTP**: Acronym for Hypertext Transfer Protocol. A protocol to transfer hypertext request and information between servers and browsers over a network.

- **DDNS**: Dynamic DNS is a method, protocol, or network service that provides the capability for a networked device, such as a router or computer system using the Internet Protocol Suite, to notify a domain name server to change, in real time (ad-hoc) the active DNS configuration of its configured hostnames, addresses or other information stored in DNS.

- **PPPoE**: Stands for "Point-to-Point Protocol over Ethernet." PPPoE is a network configuration used for establishing a PPP connection over an Ethernet protocol.

- **Hybrid device**: A hybrid device is a combination of a DVR and device.

- **NTP**: Acronym for Network Time Protocol. A protocol designed to synchronize the clocks of computers over a network.

- **NTSC**: Acronym for National Television System Committee. NTSC is an analog television standard used in such countries as the United States and Japan. Each frame of an NTSC signal contains 525 scan lines at 60Hz.

- **Device**: Acronym for Network Video Recorder. A device can be a PC-based or embedded system used for centralized management and storage for IP cameras, IP Domes and other devices.

- **PAL**: Acronym for Phase Alternating Line. PAL is also another video standard used in broadcast television systems in large parts of the world. PAL signal contains 625 scan lines at 50Hz.

- **PTZ**: Acronym for Pan, Tilt, Zoom. PTZ cameras are motor driven systems that allow the camera to pan left and right, tilt up and down and zoom in and out.

- **USB**: Acronym for Universal Serial Bus. USB is a plug-and-play serial bus standard to interface devices to a host computer.
19.3 Troubleshooting

- **No image displayed on the monitor after starting up normally.**

  **Possible Reasons:**
  - No VGA or HDMI connections.
  - Connection cable is damaged.
  - Input mode of the monitor is incorrect.

  **Step 1** Verify the device is connected with the monitor via HDMI or VGA cable.

  **Step 2** If not, please connect the device with the monitor and reboot.

  **Step 3** Verify the connection cable is good.

  **Step 4** If there is still no image display on the monitor after rebooting, please check if the connection cable is good, and change a cable to connect again.

  **Step 5** Verify Input mode of the monitor is correct.

  **Step 6** Please check the input mode of the monitor matches with the output mode of the device (e.g. if the output mode of device is HDMI output, then the input mode of monitor must be the HDMI input). And if not, please modify the input mode of monitor.

  **Step 7** Check if the fault is solved by the step 1 to step 3.

  **Step 8** If it is solved, finish the process.

    If not, please contact the engineer from Hikvision to do the further process.

- **There is an audible warning sound “Di-Di-Di-DiDi” after a new bought device starts up.**

  **Possible Reasons:**
  - No HDD is installed in the device.
  - The installed HDD has not been initialized.
  - The installed HDD is not compatible with the device or is broken-down.

  **Step 9** Verify at least one HDD is installed in the device.

    - If not, please install the compatible HDD.

  **NOTE**

  Please refer to the *Quick Start Guide* for the HDD installation steps.

    - If you don’t want to install a HDD, go to Menu>System> Event>Normal Event>Exception, and uncheck the Audible Warning checkbox of “HDD Error”.

  **Step 10** Verify the HDD is initialized.
21) Go to Menu>Storage>Storage Device.
22) If the status of the HDD is “Uninitialized”, please check the checkbox of corresponding HDD and click the “Init” button.

Step 11 Verify the HDD is detected or is in good condition.

23) Select Menu>Storage>Storage Device.
24) If the HDD is not detected or the status is “Abnormal”, please replace the dedicated HDD according to the requirement.

Step 12 Check if the fault is solved by the step 1 to step 3.

If it is solved, finish the process.

If not, please contact the engineer from Hikvision to do the further process.

- The status of the added IP camera displays as “Disconnected” when it is connected through Private Protocol. Select “Menu>Camera>Camera>IP Camera” to get the camera status.

Possible Reasons:
- Network failure, and the device and IP camera lost connections.
- The configured parameters are incorrect when adding the IP camera.
- Insufficient bandwidth.

Step 13 Verify the network is connected.

25) Connect the device and PC with the RS-232 cable.
26) Open the Super Terminal software, and execute the ping command. Input “ping IP” (e.g. ping 172.6.22.131).

NOTE

Simultaneously press Ctrl and C to exit the ping command.

If there exists return information and the time value is little, the network is normal.

Step 14 Verify the configuration parameters are correct.

27) Go to Menu>Camera.
28) Verify the following parameters are the same with those of the connected IP devices, including IP address, protocol, management port, user name and password.

Step 15 Verify the whether the bandwidth is enough.

29) Go to Menu>Maintenance>Net Detect>Network Stat..
30) Check the usage of the access bandwidth, and see if the total bandwidth has reached its limit.

Step 16 Check if the fault is solved by the step 1 to step 3.

If it is solved, finish the process.
If not, please contact the engineer from Hikvision to do the further process.

- **The IP camera frequently goes online and offline and the status of it displays as “Disconnected”**.

**Possible Reasons:**
- The IP camera and the device versions are not compatible.
- Unstable power supply of IP camera.
- Unstable network between IP camera and device.
- Limited flow by the switch connected with IP camera and device.

**Step 17** Verify the IP camera and the device versions are compatible.

31) Go to Menu>Camera, and view the firmware version of connected IP camera.
32) Go to Menu>Main tenance>System Info>Device Info and view the firmware version of device.

**Step 18** Verify power supply of IP camera is stable.

33) Verify the power indicator is normal.
34) When the IP camera is offline, please try the ping command on PC to check if the PC connects with the IP camera.

**Step 19** Verify the network between IP camera and device is stable.

35) When the IP camera is offline, connect PC and device with the RS-232 cable.
36) Open the Super Terminal, use the ping command and keep sending large data packages to the connected IP camera, and check if there exists packet loss.

**NOTE**

Simultaneously press **Ctrl** and **C** to exit the ping command.

**Example:** Input `ping 172.6.22.131 –l 1472 –f`.

**Step 20** Verify the switch is not flow control.

Check the brand, model of the switch connecting IP camera and device, and contact with the manufacturer of the switch to check if it has the function of flow control. If so, please turn it down.

**Step 21** Check if the fault is solved by the step 1 to step 4.

If it is solved, finish the process.

If not, please contact the engineer from Hikvision to do the further process.

- **No monitor connected with the device locally and when you manage the IP camera to connect with the device by web browser remotely, of which the status displays as Connected.**
And then you connect the device with the monitor via VGA or HDMI interface and reboot the device, there is black screen with the mouse cursor.

Connect the device with the monitor before startup via VGA or HDMI interface, and manage the IP camera to connect with the device locally or remotely, the status of IP camera displays as Connect. And then connect the device with the CVBS, and there is black screen either.

**Possible Reasons:**

After connecting the IP camera to the device, the image is output via the main spot interface by default.

**Step 22** Enable the output channel.

**Step 23** Go to Menu>System>Live View>General, and select video output interface in the drop-down list and configure the window you want to view.

**NOTE**

- The view settings can only be configured by the local operation of device.
- Different camera orders and window-division modes can be set for different output interfaces separately, and digits like “D1” and “D2” stands for the channel number, and “X” means the selected window has no image output.

**Step 24** Check if the fault is solved by the above steps.

  - If it is solved, finish the process.
  - If not, please contact the engineer from Hikvision to do the further process.

**Live view stuck when video output locally.**

**Possible Reasons:**

- Poor network between device and IP camera, and there exists packet loss during the transmission.
- The frame rate has not reached the real-time frame rate.

**Step 25** Verify the network between device and IP camera is connected.

- When image is stuck, connect the RS-232 ports on PC and the rear panel of device with the RS-232 cable.
- Open the Super Terminal, and execute the command of “\texttt{ping 192.168.0.0 –l 1472 –f}” (the IP address may change according to the real condition), and check if there exists packet loss.

**NOTE**

Simultaneously press \texttt{Ctrl} and \texttt{C} to exit the ping command.

**Step 26** Verify the frame rate is real-time frame rate.
Go to Menu>Camera>Encoding Parameters, and set the Frame rate to Full Frame.

Step 27 Check if the fault is solved by the above steps.

If it is solved, finish the process.

If not, please contact the engineer from Hikvision to do the further process.

**Live view stuck when video output remotely via the Internet Explorer or platform software.**

Possible Reasons:

- Poor network between device and IP camera, and there exists packet loss during the transmission.
- Poor network between device and PC, and there exists packet loss during the transmission.
- The performances of hardware are not good enough, including CPU, memory, etc..

Step 28 Verify the network between device and IP camera is connected.

37) When image is stuck, connect the RS-232 ports on PC and the rear panel of device with the RS-232 cable.

38) Open the Super Terminal, and execute the command of “ping 192.168.0.0 –l 1472 –f” (the IP address may change according to the real condition), and check if there exists packet loss.

Simultaneously press Ctrl and C to exit the ping command.

Step 29 Verify the network between device and PC is connected.

1) Open the cmd window in the Start menu, or you can press “windows+R” shortcut key to open it.

2) Use the ping command to send large packet to the device, execute the command of “ping 192.168.0.0 –l 1472 –f” (the IP address may change according to the real condition), and check if there exists packet loss.

Simultaneously press Ctrl and C to exit the ping command.

Step 30 Verify the hardware of the PC is good enough.

Simultaneously press Ctrl, Alt and Delete to enter the windows task management interface, as shown in the following figure.
Select the “Performance” tab; check the status of the CPU and Memory.

If the resource is not enough, please end some unnecessary processes.

Step 31 Check if the fault is solved by the above steps.

If it is solved, finish the process.

If not, please contact the engineer from Hikvision to do the further process.

When using the device to get the live view audio, there is no sound or there is too much noise, or the volume is too low.

Possible Reasons:

- Cable between the pickup and IP camera is not connected well; impedance mismatches or incompatible.
- The stream type is not set as “Video & Audio”.
- The encoding standard is not supported with device.

Step 32 Verify the cable between the pickup and IP camera is connected well; impedance matches and compatible.

Log in the IP camera directly, and turn the audio on, check if the sound is normal. If not, please contact the manufacturer of the IP camera.

Step 33 Verify the setting parameters are correct.

Go to Menu>Camera>Encoding Parameters, and set the Stream Type as “Audio & Video”.

Step 34 Verify the audio encoding standard of the IP camera is supported by the device.
The device supports G722.1 and G711 standards, and if the encoding parameter of the input audio is not one of the previous two standards, you can log in to the IP camera to configure it to the supported standard.

Step 35 Check if the fault is solved by the above steps.

If it is solved, finish the process.

If not, please contact the engineer from Hikvision to do the further process.

- The image gets stuck when device is playing back by single or multi-channel.

  Possible Reasons:

  - Poor network between device and IP camera, and there exists packet loss during the transmission.
  - The frame rate is not the real-time frame rate.
  - The device supports up to 16-channel synchronize playback at the resolution of 4CIF, if you want a 16-channel synchronize playback at the resolution of 720p, the frame extracting may occur, which leads to a slight stuck.

Step 36 Verify the network between device and IP camera is connected.

1) When image is stuck, connect the RS-232 ports on PC and the rear panel of device with the RS-232 cable.

2) Open the Super Terminal, and execute the command of “ping 192.168.0.0 –l 1472 –f” (the IP address may change according to the real condition), and check if there exists packet loss.

Simultaneously press the Ctrl and C to exit the ping command.

Step 37 Verify the frame rate is real-time frame rate.

Select “Menu > Record > Parameters > Record”, and set the Frame Rate to “Full Frame”.

Step 38 Verify the hardware can afford the playback.

Reduce the channel number of playback.

Go to Menu>Camera>Encoding Parameters, and set the resolution and bitrate to a lower level.

Step 39 Reduce the number of local playback channel.

Go to Menu>Playback, and uncheck the checkbox of unnecessary channels.

Step 40 Check if the fault is solved by the above steps.

If it is solved, finish the process.
If not, please contact the engineer from Hikvision to do the further process.

- **No record file found in the device local HDD, and prompt “No record file found”**.

  **Possible Reasons:**
  - The time setting of system is incorrect.
  - The search condition is incorrect.
  - The HDD is error or not detected.

**Step 41** Verify the system time setting is correct.

  Go to Menu>System>General, and verify the “Device Time” is correct.

**Step 42** Verify the search condition is correct.

  Go to playback interface, and verify the channel and time are correct.

**Step 43** Verify the HDD status is normal.

  Go to Menu>Storage>Storage Device to view the HDD status, and verify the HDD is detected and can be read and written normally.

**Step 44** Check if the fault is solved by the above steps.

  If it is solved, finish the process.
  
  If not, please contact the engineer from Hikvision to do the further process.
