Regulatory Information

FCC Information
Please take attention that changes or modification not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

FCC compliance: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

FCC Conditions
This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:
1. This device may not cause harmful interference.
2. This device must accept any interference received, including interference that may cause undesired operation.

EU Conformity Statement
This product and - if applicable - the supplied accessories too are marked with “CE” and comply therefore with the applicable harmonized European standards listed under the Low Voltage Directive 2014/35/EU, the EMC Directive 2014/30/EU, 2012/19/EU (WEEE directive): Products marked with this symbol cannot be disposed of as unsorted municipal waste in the European Union. For proper recycling, return this product to your local supplier upon the purchase of equivalent new equipment, or dispose of it at designated collection points. For more information see: www.recyclethis.info.
2006/66/EC (battery directive): This product contains a battery that cannot be disposed of as unsorted municipal waste in the European Union. See the product documentation for specific battery information. The battery is marked with this symbol, which may include lettering to indicate cadmium (Cd), lead (Pb), or mercury (Hg). For proper recycling, return the battery to your supplier or to a designated collection point. For more information, see: www.recyclethis.info.

Industry Canada ICES-003 Compliance
This device meets the CAN ICES-3 (A)/NMB-3(A) standards requirements.
Safety Instruction
These instructions are intended to ensure that user can use the product correctly to avoid danger or property loss. The precaution measure is divided into “Warnings” and “Cautions”.

**Warnings**: Serious injury or death may occur if any of the warnings are neglected.
**Cautions**: Injury or equipment damage may occur if any of the cautions are neglected.

<table>
<thead>
<tr>
<th>Warnings</th>
<th>Cautions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Follow these safeguards to prevent serious injury or death.</td>
<td>Follow these precautions to prevent potential injury or material damage.</td>
</tr>
</tbody>
</table>

**Warnings**
- In the use of the device, you must be in strict compliance with the electrical safety regulations of the nation and region.
- Input voltage should meet both the SELV (Safety Extra Low Voltage) and the Limited Power Source with 12 VDC according to the IEC60950-1 standard. Refer to technical specifications for detailed information.
- Do not connect multiple devices to one power adapter to avoid over-heating or a fire hazard caused by overload.
- Make sure that the plug is firmly connected to the power socket.
- Make sure that the device is firmly fixed if wall mounting or ceiling mounting is adopted.
- If smoke, odor or noise rise from the device, turn off the power at once and unplug the power cord, and then contact the service center.
- Never attempt to disassemble the camera by unprofessional personal.

**Cautions**
- Do not drop the camera or subject it to physical shock.
- Do not touch sensor modules with fingers.
- If cleaning is necessary, use clean cloth with a bit of ethanol and wipe it gently.
- Do not aim the camera at the sun or extra bright places.
- The sensor may be burned out by a laser beam, so when any laser equipment is in using, make sure that the surface of sensor will not be exposed to the laser beam.
- Do not expose the device to high electromagnetic radiation or extremely hot, cold, dusty or damp environment.
- To avoid heat accumulation, good ventilation is required for the operating environment.
- Keep the camera away from liquid while in use for non-water-proof device.
- While in delivery, the camera shall be packed in its original packing, or packing of the same texture.
1 Introduction

1.1 Product Features
The main features are as follows:
- High performance CMOS sensor
- IR cut filter with auto switch
- OSD menu with configurable parameters
- Auto white balance
- Internal synchronization
- SMART IR mode
- 3-axis adjustment

1.2 Overview

Before you start:
The cables of device vary according to different models. The cables of each type are shown in the figures below, refer to the actual sample.

1.2.1 Overview of Type I Camera

Figure 1-1 Overview of Type I Camera

Note:
Press and hold the switch button for 5 seconds to switch the video output. Four kinds of video outputs are available: TVI, AHD, CVI, and CVBS.

1.2.2 Overview of Type II Camera

Figure 1-2 Overview of Type II Camera

Note:
Press and hold the switch button for 5 seconds to switch the video output. Four kinds of video outputs are available: TVI, AHD, CVI, and CVBS.
2 Installation

Before you start:
- Make sure that the device in the package is in good condition and all the assembly parts are included.
- Make sure that all the related equipment is power-off during the installation.
- Check the specification of the products for the installation environment.
- Check whether the power supply is matched with your power output to avoid the damage.
- Make sure the wall is strong enough to withstand three times the weight of the camera and the bracket.
- If the wall is cement, insert expansion bolts before installing the camera. If the wall is wooden, use self-tapping screws to secure the camera.
- If the product does not function properly, contact your dealer or the nearest service center. Do NOT disassemble the camera for repair or maintenance by yourself.

2.1 Installation of Type I Camera

2.1.1 Ceiling/Wall Mounting without Junction Box

Before you start:
The installation steps of ceiling mounting and wall mounting are similar and the following takes ceiling mounting as an example to describe the steps.

Steps:
1. Paste the drill template (supplied) to the place where you want to install the camera.
2. Drill the screw holes and the cable hole (optional) in the ceiling/wall according to the drill template.

3. Route the cables through the cable hole, or the side opening.
4. Install the camera to the ceiling with supplied screws.

![Drill Template](image1)

![Install the Camera to the Ceiling](image2)
Note:
- The supplied screw package contains self-tapping screws, and expansion bolts.
- For cement wall/ceiling, expansion bolts are required to fix the camera. For wooden wall/ceiling, self-tapping screws are required.

5. Connect the corresponding power cord, and video cable.
6. Power on the camera to check whether the image on the monitor is gotten from the optimum angle. If not, adjust the camera according to the figure below to get an optimum angle.

![Diagram of 3-axis Adjustment](image)

Figure 2-3 3-axis Adjustment
1). Loosen the P screw to adjust the pan position \([0^\circ \text{ to } 360^\circ]\). Tighten the screw after completing the adjustment.
2). Loosen the T screw to adjust the tilt position \([0^\circ \text{ to } 90^\circ]\). Tighten the screw after completing the adjustment.
3). Loosen the R screw and rotate the camera \([0^\circ \text{ to } 360^\circ]\). Tighten the screw after completing the adjustment.

2.1.2 Ceiling/Wall Mounting with Junction Box

Before you start:
You need to purchase a junction box separately.

Steps:
1. Paste the drill template on the ceiling/wall.
2. Drill screw holes and the cable hole in the ceiling/wall according to the holes of the drill template.

![Diagram of Drill Template](image)

Figure 2-4 Drill Template

Note:
Drill the cable hole, when adopting the ceiling outlet to route the cable.
3. Take apart the junction box, and align the screw holes of the camera with those on the junction box’s cover.
4. Fix the camera on the junction box’s cover.

![Diagram of Fixing Camera on Junction Box](image)

Figure 2-5 Fix the Camera on the Junction Box’s cover
5. Attach the junction box’s body to the ceiling/wall by aligning the screw holes of the junction box.
6. Secure the junction box’s body with supplied screws on the ceiling/wall.

![Figure 2-6 Secure the Box’s Body to the Ceiling](image)

7. Route the cables through the cable hole, or the side opening of the junction box.
8. Combine the junction box cover with its body.

![Figure 2-7 Install the Junction Box Cover back to its Body](image)

9. Refer to step 5 to 6 of 2.1.1 Ceiling/Wall Mounting without Junction Box to complete the installation.

### 2.2 Installation of Type II Camera

#### 2.2.1 Ceiling/Wall Mounting without Junction Box

**Before you start:**
The installation steps of ceiling mounting and wall mounting are similar and the following takes ceiling mounting as an example to describe the steps.

**Steps:**
1. Paste the drill template (supplied) to the place where you want to install the camera.
2. Drill the screw holes according to the drill template, and the cable hole (optional) on the ceiling.

![Figure 2-8 Drill Template](image)

**Note:**
Drill the cable hole in the center of the drill template, when adopting ceiling outlet to route the cable.
3. Loosen screws to remove the clip plate, and take out the main body.

![Figure 2-9 Remove the Clip Plate](image)

4. Install the camera to the ceiling with supplied screws.

![Figure 2-10 Install the Mounting Base to the Ceiling](image)

**Note:**
- The supplied screw package contains self-tapping screws, and expansion bolts.
- For cement wall/ceiling, expansion bolts are required to install the camera. For wooden wall/ceiling, self-tapping screws are required.

5. Route the cables through the cable hole, or the side opening.

6. Install the main body to the mounting base and insert the clip plate.

![Figure 2-11 Install the Turret Camera](image)

7. Tighten the screws with the screw driver.

8. Connect the corresponding cables, such as power cord, and video cable.

9. Power on the camera to check whether the image on the monitor is gotten from the optimum angle. If not, adjust the camera according to the figure below to get an optimum angle.
1). Hold the camera body and rotate the enclosure to adjust the pan position [0° to 360°].
2). Move the camera body up and down to adjust the tilt position [0° to 75°].
3). Rotate the camera body to adjust the rotation position [0° to 360°].

2.2.2 Ceiling/Wall Mounting with Junction Box

Before you start:
You need to purchase a junction box separately.

Steps:
1. Paste the drill template on the ceiling/wall.
2. Drill screw holes and the cable hole (optional) in the ceiling/wall according to the holes of the drill template.

Note: Drill the cable hole, when adopting ceiling outlet to route the cable.

3. Refer to step 3 of 2.2.1 Ceiling/Wall Mounting without Junction Box to take out the camera’s main body.
4. Take apart the junction box, and align the screw holes of the camera with those on the junction box’s cover.
5. Fix the camera’s mounting base on the junction box’s cover with three PM4 × 10 screws.

6. Secure the junction box’s body on the ceiling/wall with four PA4 × 25 screws.

7. Combine the junction box cover with its body with supplied screws on the junction box’s cover.
8. Repeat steps 5 to 9 of 2.2.1 Ceiling/Wall Mounting without Junction Box to complete the installation.
3 Menu Description

Please follow the steps below to call the menu.

**Steps:**
1. Connect the camera with the TVI DVR, and the monitor, shown as the figure 3-1.

![Figure 3-1 Connection](image)

2. Power on the analog camera, TVI DVR, and the monitor to view the image on the monitor.
3. Click PTZ Control to enter the PTZ Control interface.
4. Call the camera menu by clicking the button, or call preset No. 95.

![Figure 3-2 Main Menu Overview](image)

5. Click the direction arrow to control the camera.
(1) Click up/down direction button to select the item.
(2) Click Iris + to confirm the selection.
(3) Click left/right direction button to adjust the value of the selected item.

### 3.1 Video Format
- When switching the video output as CVBS, you can set the video format as PAL, or NTSC.
- When switching the video output as TVI, you can set the video format 2MP@25fps, or 2MP@30fps.
- When switching the video output as AHD, you can set the video format 2MP@25fps, or 2MP@30fps.
- When switching the video output as CVI, you can set the video format 2MP@25fps, or 2MP@30fps.

### 3.2 Exposure
Exposure describes the brightness-related parameters, which can be adjusted by **Exposure Mode**, AGC, and SLOW SHUTTER.

![Exposure Settings](#)

**Exposure Mode**

- **GLOBAL** refers to the normal exposure mode which performs exposure according to the whole image brightness.
- **BLC (Backlight Compensation)**
  BLC compensates for the light for the front object to make it clear, but this may cause the over-exposure of the background, where the light is strong.
- **WDR (Wide Dynamic Range)**
  The WDR helps the camera provide clear images even under backlight circumstances. When both very bright and very dark areas simultaneously exist in the image, WDR balances the brightness level of the whole image to provide clear images with details.
- **HLC (High Light Compensation)**
  HLC: Masks strong light sources that usually flare across a scene. This makes it possible to see the detail of the image that would normally be hidden.

**AGC (Automatic Gain Control)**
It optimizes the clarity of the image in poor light conditions. The AGC level can be set as **HIGH**, **MEDIUM**, or **LOW**.

*Note:* The noise will be amplified when setting the AGC level. The higher the level is, the more obvious the noise is.

**SLOW SHUTTER**
SLOW SHUTTER increases the exposure time on a single
frame, which makes a camera more sensitive to the light so it can produce images even in low lux conditions.
You can set the SLOW SHUTTER function as OFF, x2, x4, x6, x8, x10, x12, x14, or x16 according to the different light conditions.

3.3 DAY/NIGHT COLOR, BW (Black White), and AUTO are selectable for DAY/NIGHT switch.

COLOR
The image is colored in day mode all the time.

B & W (Black and White)
The image is black and white all the time, and the IR LIGHT turns on in the poor light conditions.
You can turn on/off the IR LIGHT and set the value of SMART IR in this menu.

- IR LIGHT
You can turn on/off the IR LIGHT to meet the requirements of different circumstances.

- SMART IR
The Smart IR function is used to adjust the light to its most suitable intensity, and prevent the image from over exposure.
You can select the mode as MODE 1, or MODE 2. MODE 1 is the default mode that can be applied to both indoor conditions, and outdoor conditions. When selecting the MODE 1, the IR Light has more obvious effects.

- LEVEL
The LEVEL value can be adjusted from 0 to 3. The greater the value is, the more obvious effects are.

AUTO
Automatically switch Color, or BW (Black and White) according to actual scene brightness.
You can turn on/off the IR LIGHT, and set the value of SMART IR in this menu.

- IR LIGHT
You can turn on/off the IR LIGHT to meet the requirements of different circumstances.

- **SMART IR**
  The Smart IR function is used to adjust the light to its most suitable intensity, and prevent the image from over exposure.
  You can select the mode as **MODE 1**, or **MODE 2**. **MODE 1** is the default mode that can be applied to both indoor conditions, and outdoor conditions. When selecting the **MODE 1**, the IR Light has more obvious effects.

- **D → N Threshold (Day to Night Threshold)**
  Day to Night Threshold is used to control the sensitivity of switching the day mode to the night mode. You can set the value from 1 to 9. The larger the value is, the more sensitive the camera is.

- **N → D Threshold (Night to Day Threshold)**
  Night to Day Threshold is used to control the sensitivity of switching the night mode to the day mode. You can set the value from 1 to 9. The larger the value is, the more sensitive the camera is.

### 3.4 VIDEO SETTINGS
Move the cursor to **VIDEO SETTINGS** and click Iris+ to enter the submenu. **WHITE BALANCE**, **BRIGHTNESS**, **CONTRAST**, **SHARPNESS**, **SARUTATION**, **DNR**, and **MIRROR** are adjustable.

![VIDEO SETTINGS](image)

**IMAGE MODE**
**IMAGE MODE** is used to adjust the image saturation, and you can set it as **STD** (Standard), or **HIGH-SAT** (High Saturation)

**WHITE BALANCE**
White balance, the white rendition function of the camera, is to adjust the color temperature according to the environment. It can remove unrealistic color casts in the image. You can set the mode as **AUTO**, or **MANUAL**.

- **AUTO**
  Under **AUTO** mode, white balance is being adjusted automatically according to the color temperature of the scene illumination.

- **MANUAL**
  You can set the **R GAIN/B GAIN** value from 1 to 255 to adjust the shades of red/blue color of the image.
Figure 3-7 MANUAL MODE

**BRIGHTNESS**

Brightness refers to the brightness of the image. You can set the brightness value from 1 to 9 to darken or brighten the image. The higher the value is, the brighter the image is.

**CONTRAST**

This feature enhances the difference in color and light between parts of an image. You can set the CONTRAST value from 1 to 9.

**SHARPNESS**

Sharpness determines the amount of detail an imaging system can reproduce. You can set the SHARPNESS value from 1 to 9.

**SATURATION**

Adjust this feature to change the saturation of the color. The value ranges from 1 to 9.

**3DNR (Digital Noise Reduction)**

The 3DNR function can decrease the noise effect, especially when capturing moving images in poor light conditions and delivering more accurate and sharp image. You can set the 3DNR value from 1 to 9.

**MIRROR**

OFF, H, V, and HV are selectable for mirror.

OFF: The mirror function is disabled.

H: The image flips 180° horizontally.

V: The image flips 180° vertically.

HV: The image flips 180° both horizontally and vertically.

**3.5 FUNCTIONS**

On the FUNCTIONS submenu, you can set the motion detection and the privacy mask of the camera.

**MOTION DETECTION**

In the user-defined motion detection surveillance area, the moving object can be detected and the alarm will be triggered. Up to 4 motion detection areas can be configured.

**BRIGHTNESS**

Brightness refers to the brightness of the image. You can set the brightness value from 1 to 9 to darken or brighten the image. The higher the value is, the brighter the image is.

**CONTRAST**

This feature enhances the difference in color and light between parts of an image. You can set the CONTRAST value from 1 to 9.

**SHARPNESS**

Sharpness determines the amount of detail an imaging system can reproduce. You can set the SHARPNESS value from 1 to 9.

**SATURATION**

Adjust this feature to change the saturation of the color. The value ranges from 1 to 9.

**3DNR (Digital Noise Reduction)**

The 3DNR function can decrease the noise effect, especially when capturing moving images in poor light conditions and delivering more accurate and sharp image. You can set the 3DNR value from 1 to 9.

**MIRROR**

OFF, H, V, and HV are selectable for mirror.

OFF: The mirror function is disabled.

H: The image flips 180° horizontally.

V: The image flips 180° vertically.

HV: The image flips 180° both horizontally and vertically.

**3.5 FUNCTIONS**

On the FUNCTIONS submenu, you can set the motion detection and the privacy mask of the camera.

**MOTION DETECTION**

In the user-defined motion detection surveillance area, the moving object can be detected and the alarm will be triggered. Up to 4 motion detection areas can be configured.
Select a **MOTION** area. Set the **MODE** as **ON**. Click the up/down/left/right button to define the position, and the size of the area. Set the **SENSITIVITY** from 1 to 9.

**PRIVACY**
The privacy mask allows you to cover certain areas which you don’t want to be viewed, or recorded. Up to 4 privacy areas are configurable.

Select a **PRIVACY** area. Set the **MODE** as **ON**. Click up/down/left/right button to define the position, and the size of the area.

**3.6 FACTORY DEFAULT**
Move the cursor to **FACTORY DEFAULT** and click Iris+ to reset all the settings to the factory default.

**3.7 EXIT**
Move the cursor to **EXIT** and click Iris+ to exit the menu without saving.

**3.8 SAVE & EXIT**
Move the cursor to **SAVE & EXIT** and click Iris+ to save the settings, and exit the menu.
