**THE SOLUTION FOR
CAMPUS SECURITY**

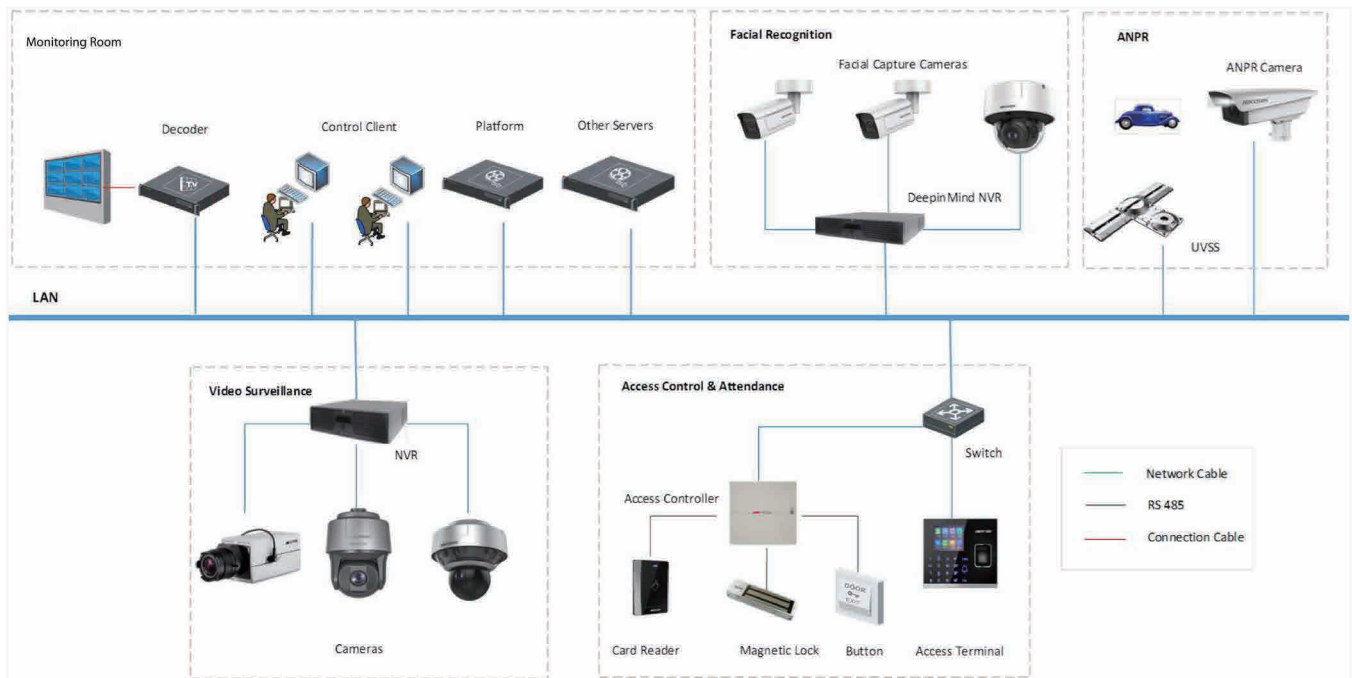

✕ Common Challenges

The safety and security of students at schools and on campuses is of paramount importance, for parents and for school administrators. At the core of that security requirement is the ability to confirm that only the right people are allowed into the school premises, both during and after school operating hours. And the safety of students and staff while attending the school facility must be a key factor for any education security system. Implementing a solution which utilizes Hikvision's most advanced network, audio, video and intelligent face recognition technologies ensures that students, parents and staff are assured that the learning environment is safe, and education is prioritised.

System Architecture

People Entrance & Exit Management

The school gates are the key site for campus security. Effectively managing who is permitted to exit and enter is at the very heart of the school security system.

Access Control

Face recognition technology allows for high levels of access control safety, preventing intruders and other unauthorised entries.

Secure Entry

Smart, safe entry for students and staff, with face recognition technology deployed intelligently as needed.

Visitor Management

A standardised, automated protocol for efficient visitor management.

✕ Vehicle Entrance & Exit Management

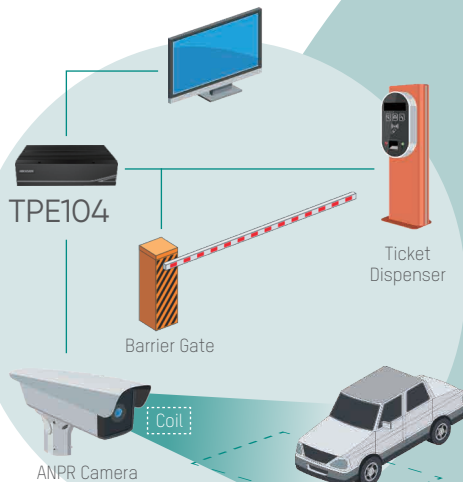

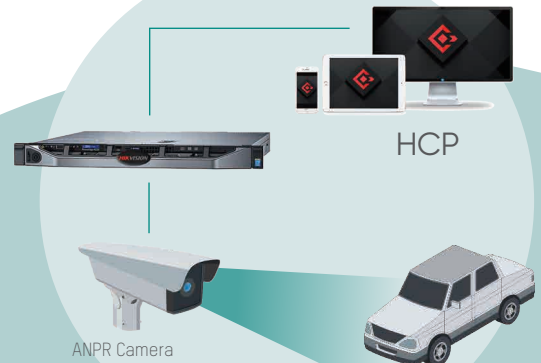

The vehicle management system can be deployed at the school car parking gates to provide quick access for staff vehicles and manual access approval for visitor vehicles. Different vehicle management strategies can be configured to meet the relevant security demands of the campus.

01

Passing Vehicle Capture Solution

Captures and records number plates and images of vehicles entering premises. Provides search functions.

02

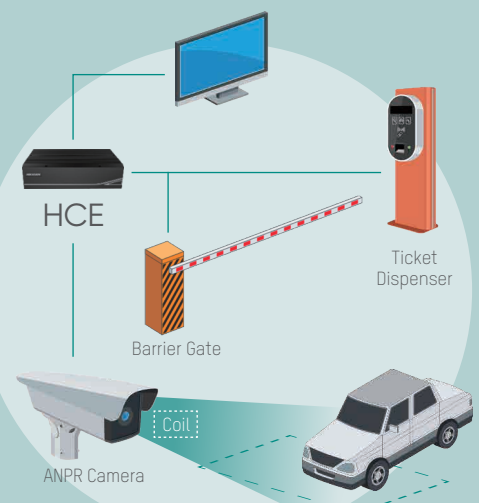

Barrier Gate Control Solution - Stand-alone Edition

Easy to deploy and cost-effective: no need for a platform server.

03

Barrier Gate Control Solution- Full Edition

Operates as a module of the fully integrated security solution.

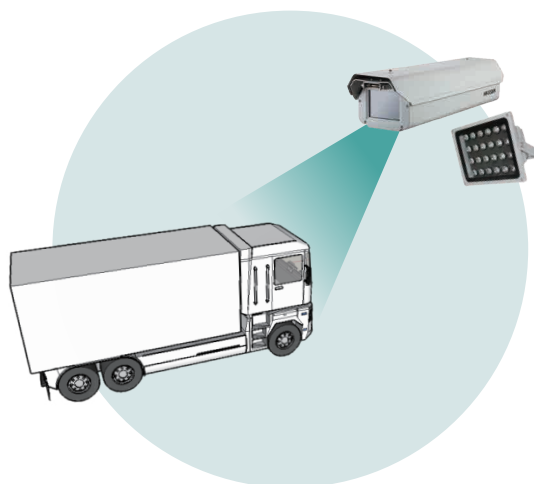

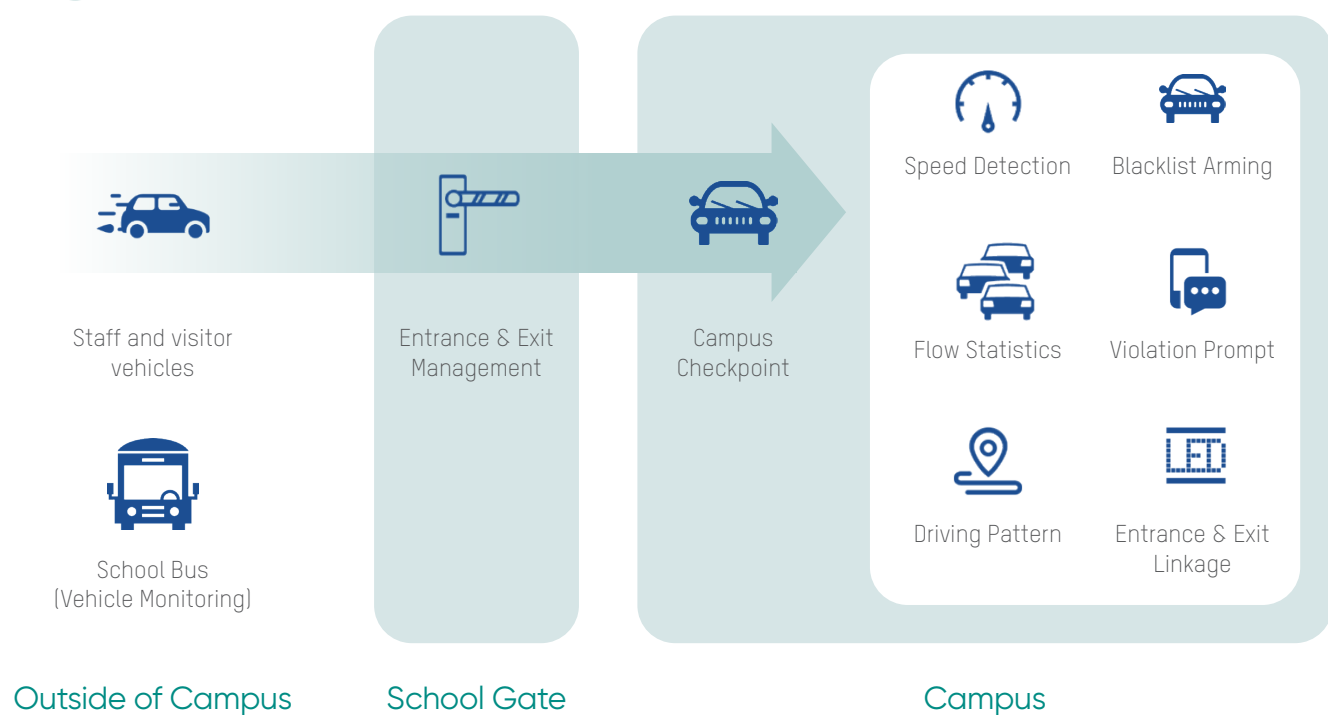

✕ Vehicle Checkpoints

Vehicle checkpoints can be deployed on arterial roads to record passing vehicles, detect speeds, and raise alerts if previously blacklisted vehicles are detected.

- Records passing vehicles for later search; provides traffic flow statistics.
- Detects vehicle speed and alarms when speed limit is exceeded.
- Supports vehicle pattern analysis; useful when conducting search.

Passing Vehicle Record

- License plate
- Vehicle type
- Time
- Location
- Direction

Speed Detection

- Real-time speed detection
- Segment speed detection

Vehicle Blacklist Management

- Vehicle blacklist management and alarm

✕ Video Security for Key Scenes

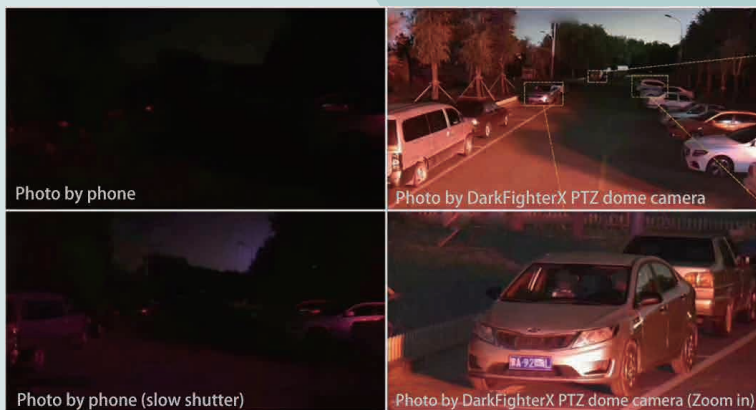

► Public Areas

PanoVu cameras provide a comprehensive view for large open areas, as well as clear, close-up video images when required.

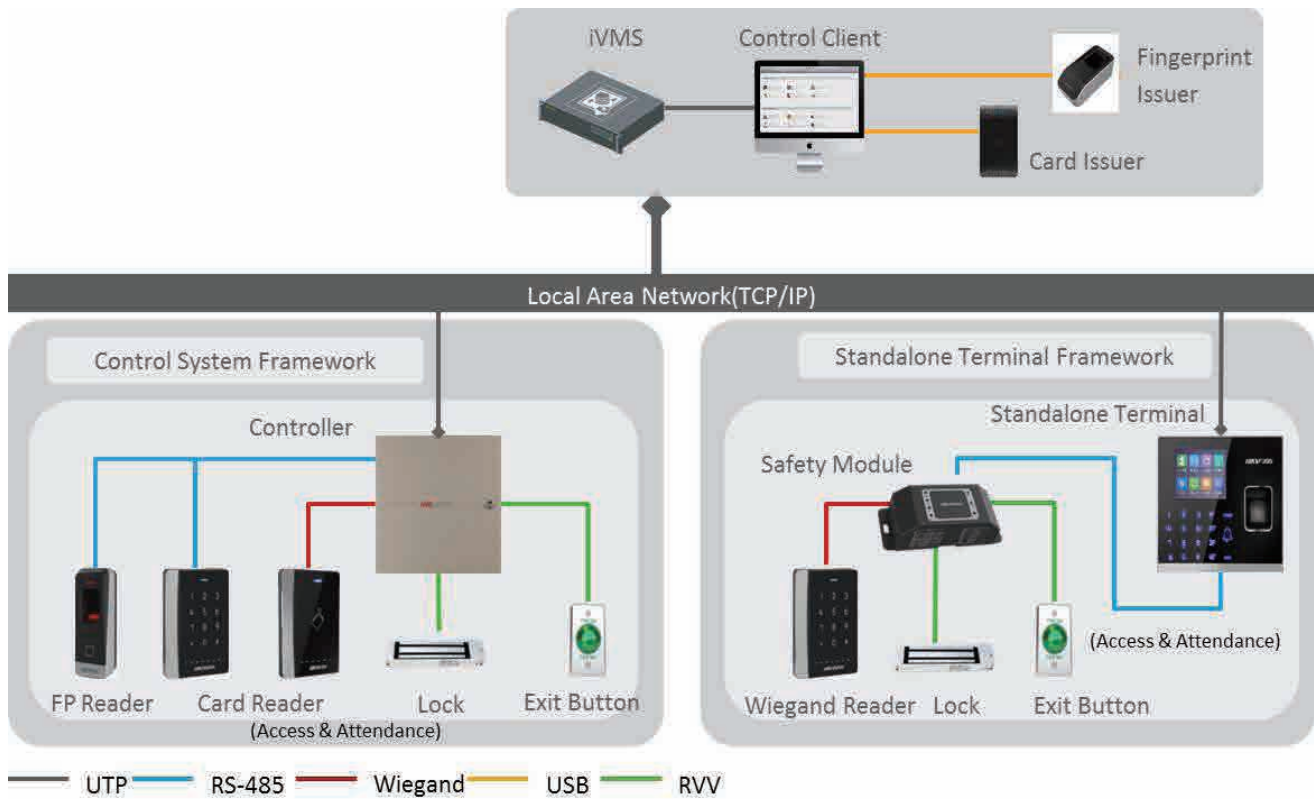

► Main Roads

DarkFighter cameras ensure video monitoring of main roads is clear and visible both day and night.

✕ Access Control for Office Areas

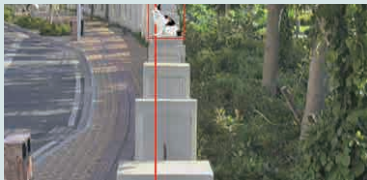

For other indoor areas such as meeting rooms, offices, financial offices, and laboratories, access control devices can be used to unlock doors. Users can customize various combinations of cards, fingerprints, or facial information for access credentials.

✕ Perimeter Protection
