

HikCentral Professional Guard Patrol Solution

Introduction

In scenarios such as a factory or industrial park, the security guards need to patrol during the night.

The traditional method requires guards to patrol whilst carrying patrol sticks and scanning RFID tags, then manually logging the data afterward. This procedure is insecure and inconvenient.

FACTORY

INDUSTRIAL PARK

OFFICE BUILDING

SCHOOL

Inconvenient to arrange shifts

Inconvenient to carry a stick for patrolling and manually downloading

Supervisor cannot receive exceptions in real time

Violation behaviours may cause potential risks

What is the guard patrol solution?

Convenient and controllable the guard patrol solution consists of MinMoe and HikCentral Professional software. The patrolling shifts can be centrally managed and assigned to each guard. Guards, are free to follow the shift directions and simply check in via face or fingerprint.

Benefits for users

Administrator

Easy to build a secure patrolling system

Supervisor

Real time monitoring & notification

Guard

Convenient patrolling without sticks

Core Features

Easy & efficient schedule management

Easy configuration

Easy for the manager to design patrol schedules & routes on visualised panel.

Never miss patrol duty

The patrol schedules will automatically distribute to the guards and send a notification before schedule.

Convenient patrolling

Patrol without stick

Dispose of patrolling sticks and RFID tags, simply scan faces on MinMoe terminals or use fingerprints to check in. Alternatively, use the mobile app to scan a printed QR code can also check in. The data will be immediately sent to HikCentral platform.

Tracking in real time

The operator in the control center can monitor real-time patrolling procedure. If any violation happens, he can check and immediately inform the guard.

Standardised & digitalised procedure to ensure safety

Effectively prevents proxy patrol

Anyone who helps others to patrol will trigger alarm immediately. Onsite patrol exceptions will notify control centre by sending captured image, footage and text contents.

Adjust with multi-dimension reports

The system provides multi-dimension reports for the administrator to analyse and adjust patrolling schedules to improve efficiency.
