</table>

Supported devices:

Front-end, Back-end products, video intercom products, security control panels- released before the end of April, 2016.
V2.5.1.7 Key Updates

[Live View and Playback]

1. Support setting the icon display on the toolbar of live view and playback window.

![Figure 1](image1.png)

2. Support naming the captured picture. Right-click on the live view and playback window and choose **Other Capture Modes-Custom Capture** to edit its name.

![Figure 2](image2.png)
3. Support searching video files during up to 31 days.
5. Add Frame Extracting for High-speed Playback interface. When play back the video in high-speed (8X speed and above), you can disable this function to make the image of playback more fluent to view the details.

[Event and Alarm]
1. Add a new way on the control panel to check alarm and event details.

2. Support custom alarm sound as desired.
3. Optimize the alarm triggered pop-up image function. The Prioritize Display of Latest Alarm is checked by default and the alarm window is in 4-window division. The latest alarm will replace the earliest alarm window of the displayed four windows.

![Figure 7](image1)

![Figure 8](image2)

You can uncheck this checkbox to switch to view the current triggered alarm.

[System]
1. Provide Player in the installation directory to view the downloaded file.
2. Add Lithuania to the language options.

[Product function]
1. Support searching the video files which contain POS information (Suitable for back-ends).
2. Support display fire source information on the live view and playback window.
